NAMES OF COMMISSIONERS OF NATIONAL EDUCATION,	34

THE

FORTY-SEVENTH REPORT

OF THE

COMMISSIONERS OF NATIONAL EDUCATION IN IRELAND, FOR THE YEAR 1880.

TO

HIS EXCELLENCY FRANCIS THOMAS DE GREY,
EARL COWPER, K.G.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

May it please your Excellency,

I.—1. WE, the Commissioners of National Education in Ireland, submit to your Excellency this our Forty-seventh Report. In this Report all statements connected with the expenditure of the public grants refer to the year ended 31st March, 1881; but the statistics connected with the number of schools, number of pupils on the rolls, the average daily attendance, and with the results of the Inspectors' examinations, refer to the year ended 31st December, 1880.

SCHOOLS AND ATTENDANCE.

2. On the 31st of December, 1880, we had 7,590 schools on the Operation List. During the year 66 schools, most of which had been inoperative for a considerable time, were struck off the Roll or suspended, or became amalgamated with other National schools; 184 schools were brought into operation—viz., 98 non-vested, 34 vested, and 7 suspended schools, giving a net increase of 68 schools as compared with 1879. Increase of Schools.

3. The number of pupils on rolls who made at least one attendance during the last fourteen days (fortnight) immediately preceding the annual examinations in the schools during the year ended 31st December, 1880, was 671,877.* Attendance on last 14 days (fortnight) of results period.

4. The average daily attendance of pupils for the year 1880 was 468,557. In 1879 the number was 435,054. This unusually large increase of 33,503 in the average attendance is, to a considerable extent, due to the benevolent operations of the committee organized by her Grace the Duchess of Marlborough, the Mansion House Committee, and the *New York Herald* Committee, who Increase in average attendance.

* The number of individual pupils on rolls who made any attendance at our schools between 1st of January and 31st of December, 1880, was 1,683,020.

in the early part of the year supplied clothing and rations of food to destitute children in the schools of the impoverished districts.

The amount of school accommodation, allowing 8 square feet for each pupil, provided for the children was adequate for an attendance of 648,949—a very gratifying fact when we consider that this was only lower by 22,928 than the total number of pupils who attended once or oftener on any of the last fourteen days of the month immediately preceding the Results Examinations.

5. The per-centage of average attendance of pupils throughout the year to the number on the rolls who attended on any of the last fourteen days (fortnight) of the month preceding the annual examinations is 69·7. These per-centages in 1879 were—in England and Wales, 69·9; Scotland, 75·7; Ireland, 67·9.

Number of schools in operation, and average daily attendance.

6. The following Table exhibits the number of National Schools as specified in our several Reports, with the average attendance for each of the last twenty years, to 31st of December, 1880:—

Year.	No. of Schools in Operation.	No. of Children in Average Attendance.	Year.	No. of Schools in Operation.	No. of Children in Average Attendance.
1861,	5,830	284,725	1871,	6,914	363,850
1862,	6,010	284,912	1872,	7,050	355,821
1863,	6,163	296,986	1873,	7,160	373,371
1864,	6,263	315,108	1874,	7,257	395,390
1865,	6,372	321,209	1875,	7,367	389,961
1866,	6,433	316,225	1876,	7,334	416,586
1867,	6,520	321,685	1877,	7,370	418,063
1868,	6,586	354,853	1878,	7,443	437,252
1869,	6,707	358,560	1879,	7,523	435,051
1870,	6,806	339,199	1880,	7,590	468,557

Applications for grants to new schools.

7. The number of applications for grants to new schools dealt with in the year 1880 was 184. In 145 cases we gave the required assistance, either as grants for building, or grants of requisites and in aid of salaries. The remaining 39 applications were rejected.

New schools.

8. The annexed Return of the 145 Schools added to our list during the Year 1880, shows the number in each Province, with the nature of the Aid granted.

Province.	Requisites, Salary, and House-fee.	Towards Building and Furnishing Schools.	Total.

10. At the termination of the year 1880, we had on our list 2,121 vested schools, classified thus:—Vested in Trustees 1,238: vested in our Board 797; and 86 for which we held Bonds for the observance of our rules. Of the total number, 115 Schools to which building grants are outstanding, are not yet in operation. Vested schools.

11. The number of non-vested schools in connexion with us on the 31st of December, 1880, was 5,681. Number nonvested.

12. The following Table shows, by Provinces, the literary classification of the 671,877 pupils who made an attendance within the last fourteen days (fortnight) of the month immediately preceding results examinations in the year ended 31st December, 1880: Literary Classification.

There are three other schools of an unmixed attendance which cannot be brought under any of the headings in these Tables, viz. :—One in Donegal, and two in Tyrone.

Unmixed
attendance
average per
School.

17. The average number of Roman Catholic and Protestant pupils on rolls in the unmixed schools, according to Provinces, in 1880, was as follows:—

	A.—Under Roman Catholic Teachers exclusively.		B.—Under Protestant Teachers exclusively.				
	Schools.	R.C. pupils per school.	Schools.	R.C. pupils.	Pres. pupils.	Others.	Protestant pupils per school.
Ulster, . . .	203	165.7	403	44.0	85.0	7.4	185.8
Munster, . . .	1,084	150.9	45	56.5	2.9	4.6	64.0
Leinster, . . .	724	149.8	89	55.6	4.5	2.5	62.5
Connaught, . . .	656	169.1	25	50.0	5.6	5.4	61.0
Total, . . .	2,779	—	553	—	—	—	—
Average per School, . . .	—	156.6	—	47.6	62.2	6.1	115.9

18. The foregoing Returns in reference to the religious denominations of the pupils, include *all the pupils* who made any attendance at our schools on any day between the 1st of January and the 31st of December, 1880. It will be seen that during the year a mixed attendance of Roman Catholic and Protestant pupils was to be found in 4,175 schools, whilst in 3,334 schools the attendance was unmixed.

Per-centage
of Schools
with mixed
Religious
attendance.

19. The per-centage of Schools exhibiting a mixed attendance of Roman Catholic and Protestant Pupils, for each year from 1871 to 1880, is as follows:—

	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.
Ulster, . . .	80.1	80.6	79.1	78.7	77.9	76.9	76.4	75.6	74.8	75.0
Munster, . . .	39.5	40.3	41.5	41.4	39.2	39.0	40.4	40.4	39.2	39.5
Leinster, . . .	46.6	48.0	49.9	51.4	50.0	51.7	51.0	50.7	49.6	49.0
Connaught, . . .	45.8	47.8	47.9	49.1	44.8	47.7	44.9	44.5	43.6	43.3
Total, . . .	57.1	58.1	58.4	58.6	57.1	57.4	56.9	56.5	55.6	55.0

MODEL SCHOOLS.

Model
Schools.

20. The number of District and Minor Model Schools in operation at the end of the year was 26—this number is exclusive of the Model Schools in the Metropolitan District. These contain in all 94 separate departments. The Results Examinations show that the Model Schools continue to maintain their high character.

21. The number of pupils on rolls who attended once or oftener within the last fourteen days (fortnight) of the month immediately preceding the results examinations in each school in 1880, was 11,092.*

22. The average daily attendance at the Model Schools for the year was 8,971.

* The total number of pupils on the rolls of the Model Schools who made any attendance for the year ended 31st December, 1880, was 16,997.

23. The per-centage of average attendance of pupils in Model Schools throughout the year to the number on the rolls who attended on any of the last 14 days (fortnight) of the month preceding the Annual Examinations was 80.8.

24. RETURN of the RELIGIOUS DENOMINATIONS of the PUPILS on the ROLLS who made any attendance at the DISTRICT and MINOR MODEL SCHOOLS between 1st January and 31st December, 1880; the NUMBER of PUPILS who attended once or oftener within the last fourteen days (fortnight) of the month immediately preceding the Results Examination in each School, and also the AVERAGE DAILY ATTENDANCE.

WORKHOUSE SCHOOLS.

Workhouse schools.

27. The number of Workhouse Schools in connexion with us on the 31st December, 1880, was 158. Of these schools 42 are in Ulster, 48 in Munster, 39 in Leinster, and 29 in Connaught.

These schools were examined on the same system as the Ordinary Schools, and extracts from the reports of our Inspectors were communicated to the Local Government Board, for the information of the different Boards of Guardians. The salaries of the Teachers are determined by the Poor Law authorities, and paid from the Consolidated Fund; but the Poor Law Guardians have power, under the Teachers Act, to award from the rates the amount of results fees payable on the Inspectors' reports.

The total number of pupils appearing on the rolls of these Workhouse Schools during the year ending 31st December, 1880, was 16,945, and the average daily attendance was 8,880.

TEACHERS AND STUDENTS IN TRAINING.

28. The establishments in which the Teachers and Students attending at our Training Institution are boarded and lodged continue to be efficiently conducted. The inmates have been distinguished, as heretofore, for the general correctness of their conduct, for order and discipline, for the exercise of kindly feeling towards one another, and for the careful observance of their religious duties. Training departments.

The total number of Teachers and Students trained in 1880 was 161, viz.: 76 males and 85 females. Of these, 59 were Roman Catholics, 49 late Established Church, 43 Presbyterians, and 8 were of other persuasions. Eighty of those trained were Principal or Assistant Teachers, and 81 were chiefly ex-pupil-teachers, ex-monitors, or distinguished pupils of National Schools. The total number trained from the commencement of our proceedings up to 31st December, 1880, was 10,558. Number trained.

Number of Teachers.

29. We had in our service on 31st December, 1880, 7,429 Principal Teachers and 3,245 Assistants, making, in the whole, 10,674 classed Teachers, of whom 3,309 had been trained in our Normal Establishment. We had also in our service, at the same time, 227 Workmistresses, 85 Junior Literary Assistants, 90 Temporary Assistants, and 8 Temporary Workmistresses. Number of Teachers.

The Conductors of Convent Schools paid by capitation are not included in this return.

30. The number of teachers in the several classes was as follows:—

RETURN of NUMBER of TEACHERS in SERVICE in all kinds of National Schools on the 31st December, 1880, distinguishing Rank and Class.

Class.	Pupils.		Assistants.		Total.	Junior Assistants.	Workmistresses and Industrial Teachers.	Temporary Assistants.		Temporary Workmistresses.

New
Teachers.

31. During the year 1880 there were 553 persons newly appointed as Principal or Assistant Teachers. We have received returns relative to the antecedents of 504 of these new Teachers, of whom 287 were principals, and 217 assistants.

Teachers
who have
withdrawn
from the
service.

32. Our Inspectors were directed to limit their returns of teachers withdrawn from the service in 1880 to cases where the withdrawal was of an undoubtedly permanent character. The returns which we obtained refer to the following 693 cases:—

	430		4,890		809		118	
	6,347							

In addition to the Paid Monitors, there was a staff of 190 Pupil-teachers in our Model Schools.

LOCAL AID TO SCHOOLS.

34. The following table, which excludes Workhouse, Lunatic Asylum, and Closed Schools, and schools from which no returns were received, shows, in counties and provinces, the amount of local emoluments, exclusive of Rates, received in aid of salaries of Teachers of 7,348 National Schools during the year 1880, with the average for each school, and for each pupil in daily attendance.

The return shows an increase upon the previous year of £2,805 11s. 5d. in the school fees of the pupils, and of £2,753 9s. 6d. in the local subscriptions, &c.; total £5,559 0s. 11d.; but the Local Rates have continued to decrease since 1876.

* This sum includes £7,735 1s. 9d. the value, estimated by the managers, of free residences and gardens for the teachers; but excludes £2,329 8s. 2d. paid by the pupils of Model Schools, but passed to the Exchequer as an extra receipt.

The next Table shows the amount of school fees and subscriptions received by Teachers each year from 1874 to 1880. There has been a steady increase in the amount of school fees and endowments, but voluntary contributions of the Poor Law Guardians from the local rates have fallen away to a serious extent.

Date.	School Fees and Subscriptions.			Contributions from Local Rates.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.
1874, . . .	73,551	14	9	—	—	—	73,551	14	9
1875, . . .	84,000	4	9	27,918	6	10	111,918	11	7

1879, . . .	136,257	11	7	12,804	13	6	149,062	5	1
1880, . . .	131,016	12	6	8,324	6	7	140,140	19	1

* 35. As the return of local aid towards the incomes of the Teachers accounted for each year does not include the total amount of funds annually subscribed in aid of National Education by local parties, we have caused a Return to be prepared showing the total additional sums locally provided in aid of education in the year 1880. The amount subscribed, £29,021 10s. 3d. was applied to the erection of new buildings, additions to school premises, repairs, improvements of house and furniture, school prizes for encouragement of pupils' attendance, &c. The following table shows the amount expended in this way during past four years:—

Other Local Contributions towards the support of the schools.

Year.	Amount.		
	£	s.	d.
1877,	43,519	17	9
1878,	41,351	13	3
1879,	37,905	13	3
1880,	29,021	10	3
	£151,695	16	6

RESULTS FEES.

36. Under the ordinary regulations Results Fees were payable as follows:—

Results fees.

- To schools in contributory Unions (under the Act 38 and 39 Vict., cap. 96), the full amount in the proportion of two-thirds from the Imperial grant to one-third contributed from the local rates;
- To schools in non-contributory Unions one-third only of the full amount that would be payable if schools were in contributory Unions.

CONTRIBUTORY UNIONS.

There were 13 Unions contributory during the year ended 31st March, 1881. The number of schools examined by Inspectors and in which results fees were paid in those Unions, was 698. The amount the teachers received out of the rates contributed by the Unions during that period was £8,195 9s. 0d.;* and according to the regulations above referred to, double that sum was paid to those teachers out of the Public grant.

Contributory Unions.

NON-CONTRIBUTORY UNIONS.

Under the special arrangement which has been renewed each year since 1876, the Board was authorized to pay the second moiety to teachers in schools in non-contributory Unions, in all cases where the local contributions amounted to a sum equalling:—

Non-Contributory Unions.

- At least 3s. 4d. per child, per annum, of the average attendance of the school, and also equalling
- At least half the amount of the results fees which might have been granted under the Act to the teachers of the same school had it been situated within a contributory Union.

There were 150 Unions of which the Guardians declined to become contributory under the Act. The number of schools

* In addition to the above there was paid to teachers of schools, situated in Unions which were not contributory, during the year 1880-81, small outstanding sums, amounting in the aggregate to £128 17s. 7d., from balances of rates on hands since these Unions were contributory. Total payments from rates, £8,324 6s. 7d.

Non-contributory
Unions.

situated in these Unions, and in which results fees were paid, was 6,612. Of the non-contributory Unions 88* were scheduled as distressed, and 62 appeared as non-scheduled Unions.

In the beginning of the year 1880, severe distress being prevalent in some parts of the country, the Board made representations to the Irish Government as to the difficulty of procuring the required local aid. The Lords of Her Majesty's Treasury consented to modify the conditions in favour of the teachers of schools situated in non-contributory Unions which had been *scheduled as distressed*; and authorized the Board for the year 1880-81 to relax the usual conditions.

The following arrangement was sanctioned:—

The contingent moiety of results fees to be paid in full only when the local contribution was at least equal to the amount of the moiety; but should the local contribution not equal that amount, the contingent results fees were to be paid only so far as they were met by local contribution.

Of the schools examined, and in which results fees were paid in the non-contributory Unions, more than one-half, viz., 3,344, were situate in distressed districts.

In 3,114 of these latter schools, the local aid contributed was sufficient to secure payment of *both moieties* of results fees. In 169 schools the local aid was sufficient to secure payment of the first moiety, and part (under the relaxed rules) of the second; and in 61 schools, as no local aid was realized, presumably owing to the distress of the parents of the children, we were able to pay only one moiety of the results fees earned.

In the non-scheduled Unions, 3,034 schools secured the payment of both moieties of results fees, the local aid being sufficient; but in 234 cases the schools failed to comply with the conditions under which the double moiety would be payable, and only one moiety of results fees was, in consequence, paid.

The actual amount of money locally provided in non-contributory Unions, according to the managers' certificates, was £110,298 17s. 5d.

The total amount lost to the teachers by insufficiency or failure in local aid was £1,682 14s. 5d.

Other local
aid.

37. The advantage gained by the teachers is not to be estimated only by the amount directly obtained from the Imperial Exchequer. By stimulating local effort in support of the schools the local aid obtained by the teaching staff employed in National Schools has gradually increased, as may be judged from a comparison of the total school fees and subscriptions raised in this and previous years:

Year.	Amount. £
1875,	84,860
1876,	107,685
1877,	119,377
1878,	125,420
1879,	126,280
1880,	131,316
Total,	£695,418

* Four of these Unions were only partially distressed.

38. Of unconditional results' fees, £68,922 14s. 7d. was paid within the financial year, and of contingent results' fees £67,837 12s. 11d., making the total results paid to Ordinary and Model Schools from the Imperial Exchequer £136,760 7s. 6d., to which, as results' payments from the rates of contributory Unions, must be added £8,324 6s. 7d., or a total of £145,084 14s. 1d. of results' fees paid to the Teachers.

39. The total amount of salaries, results' fees, premiums, gratuities, and other allowances paid by us, including the amount from rates, in the twelve months ended the 31st March, 1881, to the Principal Teachers, Assistants, Monitors, and Workmistresses in National Schools—including the Central and other Model Schools, and the payments to Organizing Teachers—was £610,915 3s. 9d. This sum includes the £5,100 12s. 0d. school fees, apportioned to Teachers in Model Schools, and it includes £2,996 11s. 11d. awarded as retiring gratuities to Teachers who did not elect to come under the provisions of the Pension Scheme, 42 & 43 Vic., cap. 74, viz. :—£1,923 10s. 6d. awarded to Teachers of ordinary National Schools, and £1,073 1s. 5d. to Teachers of Model Schools; and also a sum of £8,135 18s. 7d., placed to the credit of the Teachers, on account of stoppages for the Pension Fund.

40. The total income of the teaching staff, from all sources, for the year ended 31st March, 1881, amounted to £737,631 4s. 3d.; viz., £597,490 5s. 2d. from Board; £8,324 6s. 7d. from rates; and £131,816 12s. 6d. from payments by pupils (including portion of Model School fees), subscriptions, and the estimated value of Free Residences, &c. Of the total sum 19·0 per cent. was locally provided, and 81·0 per cent. was derived from the funds placed at our disposal by the State.

RESULTS EXAMINATIONS.

41. Since the 1st March, 1877, each pupil, in order to qualify for presentation at the results examinations, has been required in day schools to make 100 attendances of at least four hours a day for secular instruction, and in evening schools 50 attendances of two hours each evening.

42. The following results have been ascertained through individual examination of the pupils of National Schools by the Inspectors at their annual inspections within the year:—

1.—The total number of *distinct schools* examined for Results within the twelve months ended 31st December, 1880, by the Inspectors, and for which we have been able to tabulate the following particulars, was 7,568, viz. :—

No. of Ordinary schools examined,	7,206
„ Model Schools (separate departments)	94
„ P. L. Union (Fees payable by the Guardians, at their discretion,)	158
„ Evening,	90
„ Industrial, (Fees not payable by Board,)	20

(a.) Number of pupils who attended once or oftener within the last fourteen (fortnight) days of Results year :—

Males, 332,306; Females, 339,571; Total, 671,877.

- (b.) Number of pupils qualified by attendances for presentation at examination:—

Males, 239,843; Females, 245,356; Total, 485,199.

- (c.) Number who were present and examined on day of inspection for Results:—

Males, 227,060; Females, 234,514; Total, 461,574.

- (d.) The average daily attendance, as already stated, for twelve months ending 31st December, 1880, was—

Males, 236,600; Females, 231,957; Total, 468,557.

43. The following figures show the numbers of pupils examined, and the number who passed at the Results examinations:—

GRADES.	Number Examined.	Number Passed.	Percentage Passed.
Infants,	104,911	94,420*	90·0*
First Class,	81,436	62,798	77·1
Second Class,	76,312	57,728	75·6
Third Class,	67,587	47,976	71·0
Fourth Class,	53,678	34,706	64·7
Fifth Class (1st stage),	35,519	17,675	49·8
Fifth Class (2nd stage),	20,339	12,481	61·4
Sixth Class,	21,792	13,089	60·1
	461,574	340,871	73·8

Per-centage of pupils examined in each class to the total number examined in all the classes:—

Percentage in Infants' grade,	22·7	Class V. (1st stage),	7·7
Class I.,	17·7	Class V. (2nd stage),	4·4
Class II.,	16·5	Class VI.,	4·7
Class III.,	14·7		
Class IV.,	11·6		100·0

The per-centage of passes to the number of pupils examined in 1880 was:—

Reading,	91·4	Grammar,	59·8	Book-keeping,	55·8
Spelling,	80·6	Geography,	58·6	Music,	75·8
Writing,	93·8	Agriculture,	46·3	Drawing,	71·9
Arithmetic,	74·8	Needlework,	94·4	Other Extras,	64·8

* Infants are not necessarily promoted after satisfactory answering, until they reach seven years of age; the number of infants actually removed to a higher class in 1880 was 54,047.

44. GENERAL ABSTRACT OF ANSWERING.

CLASSES.	No. of Pupils examined for Results Free in subject.	No. of Pupils assigned for answering in subject.	Percentage of Pupils to No. of Pupils examined.	CLASSES. Total,	13,064	7,839	19,382	13,118	32,330	20,957

For most of these extra subjects results fees are paid in Primary Schools by the State in Great Britain as well as in Ireland. The money value of the passes gained in Extras (excluding music and drawing) was £4,920 8s. 6d.; of this sum £2,352 represented the value of passes in Geometry and Algebra; £337 15s. in Latin, Greek, French, and Irish, and £756 5s. in Physical Geography, and £1,382 13s. 6d. in branches for Females only. The remainder, £91 15s., was spread over the other subjects.

The money value of the passes gained in Music and Drawing for the year was £7,354 5s. The conditions upon which instruction in these subjects is recognised limits the teaching to a small per-centage of pupils.

BOOKS AND REQUISITES.

Books and
Requisites.

45. The amount received for books, school requisites, and apparatus, sold at first cost prices to National Schools in 1880-81, was £30,739 10s. 10d. The number of orders was 22,537, and the average amount of each order £1 7s. 3d.

46. The value of requisites and apparatus granted as Free Stock to National Schools in 1880-81 was £2,169 15s. 11d. The number of Grants was 436.

SCHOOL FARMS AND GARDENS.

School
Farms.

47. The total number of School Farms in connexion with the Board on the 31st December, 1880, was 94, of which 3 were School Farms of the First Class, under our exclusive management. All the Agricultural Schools were examined during the year, and special results fees for agriculture were granted upon the

answering of the pupils. The total number of pupils examined in agriculture in this class of schools was 1,212, of whom 670 passed in the agricultural programme.

We had also 19 schools having School Gardens attached, for the management of which, and for the agricultural knowledge displayed by the pupils, we granted special agricultural fees, upon the reports of the District Inspectors. The number of pupils examined in the School Gardens last year was 325, of whom 125 passed.

As set forth in the table at page 23, there were 32,111 pupils examined in agriculture by the District Inspectors in the Ordinary National Schools at the Results' examinations, of whom 14,857 passed. The total number of pupils examined in agriculture during the year 1880 (including the pupils of Ordinary Agricultural Schools and School Gardens, referred to above), was accordingly 33,648, of whom 15,652 gained passes for their proficiency in that branch.

TEACHERS' RESIDENCES.

48. The Act for providing residences for the teachers of non-vested National Schools, passed by the Legislature in August, 1875, has not up to the present been so generally availed of as might be expected. The number of applications formally made for loans in 1880 was 74, and the number approved, 72; and grants as distinct from loans under the Minute of the Lords of Her Majesty's Treasury to build residences in connexion with vested Schools were made in 5 cases.

*Residences
for
Teachers.*

The total number of applications since 1875 for loans was 226, of which 199 were favourably entertained; and the number of applications for grants in connexion with vested schools was 55, of which 36 were aided.

49. The number of free residences, throughout Ireland, provided without aid from the State, is 1,280.

TEACHERS' PENSION ACT.

50. The National School Teachers' Act was passed in the August of 1879. It placed, from the 1st of January, 1880, a sum of one million three hundred thousand pounds, provided out of the Irish Church surplus, at the disposal of the Lord Lieutenant, with the consent of the Treasury, for grants of pensions or gratuities to classed teachers of National Schools in Ireland, on retirement from the service.

*Pensions
for
Teachers.*

From a statement received from the Teachers' Superannuation Office, it appears that the number of teachers that joined the Pension Fund in the year ended the 31st December, 1880, was 2,771, and the amount paid in pensions was £2,515 11s. 9d., and in gratuities, £3,300.

Further results attained by this measure of the Legislature for the benefit of the Teachers will be set forth in the Appendix to this Report.

Statistics
for com-
parison.

STATISTICS FOR IRELAND ARRANGED FOR COMPARISON WITH
SIMILAR STATISTICS FOR GREAT BRITAIN.

51. In 1879 the Official Statistics Committee appointed by the Government recommended that certain Educational Statistics common to the three countries, should be given each year in a comparable form, for England and Wales, Scotland, and Ireland. The appended table gives the information for Ireland.

52. We have to express our regret at the loss of two distinguished members of our Commission within the year, James Gibson, Esq., Q.C., and Sir Dominic J. Corrigan, Bart. These vacancies, and the vacancy caused by the death of the late Right Hon. J. H. Monahan, were filled up by the appointment of the Right Hon. W. H. F. Cogan, D.L., Edmond G. Dease, Esq., J.P., and the Rev. Hugh Hanna.

53. We submit this, as our Report for the past year, to your Excellency, and in testimony thereof have caused our Corporate Seal to be hereunto affixed, this Thirty-first day of May, One Thousand Eight Hundred and Eighty-one.

SEAL

(Signed),

WM. HOMAN NEWELL, }
JOHN E. SHERIDAN, } Secretaries.

STATEMENT OF ACCOUNT

FROM

1st APRIL, 1880, TO 31st MARCH, 1881,

SHOWING THE FUNDS AT THE DISPOSAL

OF

THE COMMISSIONERS

OF

NATIONAL EDUCATION, IRELAND,

AND HOW THESE FUNDS HAVE BEEN DISTRIBUTED.

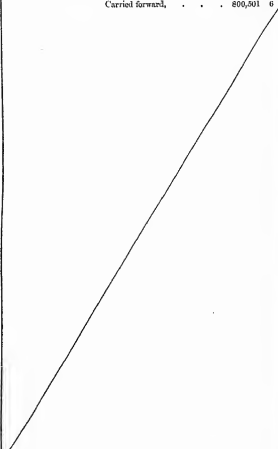

The following STATEMENT of ACCOUNT will show the FUNDS at the disposal of the COMMISSIONERS in 1880-81, and how they have been distributed:—

	£	s.	d.
The balance on 31st March, 1880,	13,830	6	0
Parliamentary Grant for 1880-81,	722,366	0	0
School Fees received from Pupils attending Model Schools, a portion of which (£5,100 12s.) is included in the payments made by the Commissioners to the Teachers of these Schools, and the remainder (£2,329 8s. 2d.) is passed to Her Majesty's Exchequer,	7,430	0	2
Amount received by the Commissioners on Sales of Farm Produce at their Model Farms (for this kind of receipt credit is taken in preparing the annual estimates as a set off against the expenditure),	6,080	6	3
Amount received for Books and other School Requisites sold to National Schools, and Miscellaneous Receipts (£1,408 18s. 5d.), which are payable to Her Majesty's Exchequer,	32,319	14	1
Dividends on Legacies and Donations (private contributions) invested in Government Securities,	84	19	0
Income Tax deductions, payable to Island Revenue Department,	1,084	18	9
Received from Her Majesty's Stationery Office for Requisites,	24	7	3
Sundry repayments of moneys due to the account of the vote of previous year (1879-80),	522	15	6
Contributions from Poor Law Guardians from the Union Rates in aid of Results Fees to Teachers of National Schools,	2,722	0	5
Stoppages from Quarterly Salaries of Teachers of one-fourth Premiums for Pensions, under Act 42 & 43 Vic., c. 74, 1879,	3,135	18	7
Total of Receipts,	£800,501	6	0

The EXPENDITURE during the year was as follows:—

Office in Dublin:		£	s.	d.	£	s.	d.
1. Salaries and Wages,	23,402	15	8

APPENDIX B.

GENERAL REPORTS ON THE STATE OF THE SCHOOLS, for the
year 1880.

The Commissioners desire it to be distinctly understood that they do not hold themselves responsible for the opinions expressed in these Reports, nor do they feel called upon to adopt any suggestions they may contain.

Mr.
Fitzgerald.

MR. M. FITZGERALD, A.B., Head Inspector.

Dublin, April, 1881.

GENTLEMEN,—I have the honour to submit for the consideration of the Commissioners of National Education, the following report for the year ended 31st of March, 1881.

The districts under my superintendence continued the same as in previous years, and the same inspectors were in charge of them, with one exception. Mr. Wilson, Inspector of Dundalk District was obliged to retire last autumn in consequence of failing health. He had been for twenty-six years in the service of the Commissioners, and was a most zealous and efficient officer.

The general work of inspection went on smoothly during the year; and the results examinations were completed within the prescribed time. These results examinations form the chief part of the inspector's ordinary duty, and are of a very arduous and exacting nature; not only from the amount and variety of the work to be done within a limited time, but from the necessity of adhering closely and punctually to the days appointed for the examinations, no matter how inclement the weather, or what the other difficulties may be. During the months of January and February of this year, the work of inspection had to go on, while the roads were covered deep with snow; and in localities where all ordinary traffic was suspended by the severity of the weather.

I cannot say that I observed any material change in the character of the schools that I inspected during the year. It must be remembered that a head inspector has not the same opportunity of forming a comparative estimate of the progress of schools, as a district inspector. He seldom examines the same school a second time, unless after such an interval as renders comparison impossible; and besides, a head inspector sees an undue proportion of the better class of schools. In addition to the Model schools which occupy a large portion of the time at his disposal for inspection, he has to examine the schools recommended as being the best in each district, to compete for the Carlisle and Blake prizes;

and the schools of teachers seeking promotion to first class, which are generally above the average, some of them very much so. It is upon the proficiency of the pupils in such schools that his estimate of the state and progress of education in his circuit must be mainly founded; and he is thus in danger of taking too favourable a view of its general condition. I have endeavoured to guard against this danger. I have also sought to correct my own estimate by the opinions of the district inspectors, as I have had opportunity of consulting them; and I have come to the conclusion that, while many defects yet remain to be removed, the majority of the schools are making fair progress; and that the prospect is encouraging. In almost all schools the junior classes are carefully attended to, and generally with success. This is shown at the results examinations, at which failure in those classes is comparatively rare, and at which the pupils, as a rule, pass with merit. In the senior classes there are more failures, and proportionally fewer meritorious passes; but the inferior grade of pass and the failures can commonly be traced to irregularity of attendance. By irregularity of attendance, I mean attendance on less than one hundred and fifty days of the results year. The rules of the Board admit pupils, who have made one hundred attendances within the preceding year, to the results examination; but one hundred attendances are not sufficient to enable pupils in the senior classes to master the numerous subjects in which they have to be prepared; and when such pupils are presented for examination they fail, or at best pass with difficulty. Hence, in most schools we find a larger proportion of inferior passes and of failures in the senior classes than in the junior. And it is to be feared that this will continue to be the case, for it is when pupils reach the senior classes that they are old enough to be useful at home, and it is scarcely to be expected that the children of the independent poor will be kept regularly to school when they are able to work. Further, the small proportion of pupils in the senior classes, as compared with the junior, proves that there are large numbers of children who leave school altogether when they reach an age at which their services become of any value at home; and before they have acquired an amount of knowledge likely to be serviceable to them in after life. Of every hundred pupils on the rolls of National schools, twenty are infants, fifty are in the junior classes—viz., first, second, and third; and only thirty in the senior classes—viz., fourth, fifth, and sixth. From the infants' class to the fourth the decrease is gradual; but it afterwards becomes more rapid, until in the sixth class only five pupils remain, and among these five a certain proportion of paid monitors is included. Thus, if we suppose the percentage of infants to represent the new pupils admitted in each year, we find that of every twenty brought within reach of instruction, only twelve proceed as far as the fourth class, and of these twelve only five persevere to the end of the school course; the other fifteen have dropped out by the way.

The percentages I have adopted are those found on the rolls on the 31st of December, 1879, and those for 1880 were probably not materially different; but if we had the corresponding percentages for June or September, we should find the proportion of infants larger, and of senior pupils lower than in winter. We need not fear, therefore, that we are over-stating the case when we say that of every twenty pupils who enter our schools, only five remain to complete their education in them; and it does not follow that even these five make the necessary hundred attendances to qualify them to be examined for results in sixth class.

Pupils who have passed creditably in fourth class, may be considered

Appendix B.

Schools.
Mr.
Fitzgerald.

Appendix B.
Reports on
the State of
Schools.

Mr.
Fitzgerald

to have acquired the instruments of knowledge; they can read, they can write, and they know the elementary rules of arithmetic—but, unless placed in a position where they will have the opportunity of further study, or daily practice in what they already know, they will soon forget it. They cannot be said to have completed their education; but they have reached a point, when, having mastered all the earlier difficulties, their future progress would be comparatively easy and certain. Apart from all questions of gain or loss to the individual, it is a serious loss to the State if pupils, for whose instruction results fees have been paid for five or six years, leave school without being educated, as pupils do who do not proceed beyond fourth class. Next to getting pupils to attend school at all, the most important thing is to keep them there long enough to derive all the benefits the school offers; and I do not know anything that would tend so directly to improve the education of the people as a successful effort to keep the pupils, who now leave after passing in fourth class, until they had passed at least once in sixth class, or even until they had passed in fifth.

The obvious and only certain means of attaining this object, is a law rendering attendance at school compulsory, up to a certain age, or a certain standard of knowledge; but this mode of meeting the difficulty is not likely to be adopted, at least for some time. We cannot as yet compel pupils to attend school, but I think we can do something to encourage them. There is an anxiety on the part, both of teachers and pupils, to secure the amount of attendance necessary to qualify for results' fees; and there is a corresponding carelessness about attendance when it is found that the number of days cannot be secured within the prescribed period. I think we might take advantage of this anxiety and get rid of this carelessness by allowing the attendance made in one year, when insufficient to qualify for results' fees, to be carried forward to the credit of the succeeding year. There is no practical difficulty whatsoever in the way of permitting this; and the advantages likely to arise from it would, in my opinion, be very great. In the first place, I believe that a large number of pupils who now drop out of the school course would be encouraged to attend; and I am certain that such pupils would receive more attention from their teachers than they now do. The teachers would have a direct pecuniary interest in looking after pupils whom it is now almost their interest to neglect; and thus both the amount of attendances, and the mass of knowledge in the country, would be increased. The number of pupils who are not seen by the Inspector at the results examinations is very large; and we have no guarantee that these pupils are receiving any education worth the name; I believe that such a change of rule as I suggest would bring a considerable proportion of them under examination, at least every second year. I do not propose that these pupils should be allowed to attend the results examination on a minimum of one hundred attendances, spread over two years; but I think that pupils making 160—or even 150—attendances in two years, might fairly be admitted. I would at the same time raise the minimum number of attendances within the year to 120.

At present about 26 per cent. of the pupils examined for results, do not make above 120 attendances each—the average being about 110; and, as already stated, it is among these pupils that the failures chiefly occur. I do not think, therefore, that the teachers would suffer any pecuniary loss by raising the number of qualifying attendances to 120; if, at the same time, we allowed them to present for examination, pupils who had made 160 attendances within the preceding two years. I would rather hope that the amount of Results' fees earned would be considerably

increased, and that the increased outlay would represent not only a larger amount, but a better quality of instruction.

I made a suggestion similar to this some years ago, and the experience I have had since then confirms me in the belief that it would be a move in the right direction. It may be interesting to mention, as one result of my investigation of the subject, that the pupils examined for results fees make as nearly as possible an average of a hundred and fifty attendances.

I regret to say that, as far as my observation and inquiries have extended, the teachers do not seem to be improving as school-keepers. There is, no doubt, increased activity in teaching; but many teachers are not aware, or have forgotten, that to make teaching thoroughly effective, it should be conducted in a systematic and orderly manner. I do not now find the same attention paid to the time-table as formerly. The same care is not bestowed upon its preparation, nor is it observed with the same fidelity. I do not think that the increased activity of teaching, which becomes almost feverish as the day of examination approaches, compensates for the loss of the regularity and definiteness produced by adherence to a well constructed time-table.

Again, I observe many of the minor details of school-keeping neglected, or but imperfectly attended to. The neatness of the room; the movements of the pupils; the supply of slates, ink-bottles, pens, &c., are, in too many cases, regarded as of little importance. Even the supply of sale stock in anticipation of the demand immediately after the results examination is too often inadequate. This last is so serious a defect, that I think it would be well if the Inspector when making his annual results report on each school were empowered to recommend the immediate issue from the Office of a suitable sale stock, where such were not already provided by the teacher, the amount to be deducted from the results fees.

The supply of schools with small requisites, such as pens, ink, slate-pencils, &c., is often a matter of difficulty. This was formerly met by allowing the teacher commission on the amount of his order for certain requisites. This was equivalent to the discount allowed by booksellers; and I cannot but regret that it has been abolished. It seems to me, however, that the difficulty might be met by granting a small supply of these minor requisites free with each parcel of books issued, the amount to be proportioned to the amount of the order. Inspectors could then insist upon a proper supply being maintained in every case, to the great benefit of many schools in which there is at present a difficulty in procuring such requisites, and a greater difficulty in getting the pupils to buy them.

These defects in what I may call the school machinery are traceable, in great degree, to one cause—the want of technical training in the majority of the teachers. Until some means be devised by which the National teachers of Ireland can be properly trained for the discharge of their duty, it is, I fear useless, to expect that general improvement in the schools, which it is the aim of all our efforts to secure. I am fully sensible of the difficulties which beset this question—difficulties into which it is not my province to enter in this report—but I cannot refrain from pointing out the fact, that for the last nineteen years the majority of the teachers employed in National schools have been practically excluded from the benefits of training; while, during the same period, the outlay by the State on Irish education has been trebled. It is scarcely necessary for me to dwell upon the anomaly of such a state of things; but I would fail in my duty if I were not to express the opinion which I hold, that the great defect of the Irish

Appendix B.
Reports on
the State of
Schools.
Mr.
Fitzgerald.

Appendix B. system of National education is the want of technical training in the majority of the teachers. In every country in which national education is established there is abundant provision made for the training of teachers; and in some countries, untrained teachers are not eligible for employment by the State. In Ireland, there is provision made for the training of a limited number of teachers; but a large proportion cannot avail themselves of it; and while this continues to be the case, we cannot expect to find our schools as efficient as they might easily be made.

Reports on the State of Schools.

Mr. F. W. Fitzgerald.

In common, I suppose with every one who has practical acquaintance with Irish National schools, I have often regretted that there is no provision made by which pupils of exceptional ability and promise would be assisted to obtain the higher education which a primary school cannot and should not be expected to give; and this feeling has been increased by the establishment of the system of Intermediate examinations.

By the happy conception of that system, a difficulty which seemed insurmountable has vanished almost at a touch, and the teachers and pupils of Intermediate schools have had a bright prospect opened before them.

I feel the wisdom of the restriction which prevents teachers of National schools from seeking to participate in the results fees that are payable under the Intermediate Education Act, while allowing the pupils to compete for the prizes; but I confess I should like to see some encouragement given to pupils of National schools to avail themselves of the advantages offered by the Act.

It has been suggested to me that this could be done by assisting some of the cleverest pupils to gain admission to schools of a higher grade where they could obtain the instruction necessary to insure their success at the Intermediate examinations. One effect of the Act has been to put schoolmasters all over the country on the alert to secure boys of superior talent, from whose success they hope to gain in reputation more than an equivalent for the reduced terms upon which they are willing to admit them to their schools. School exhibitions of £10 and £20 a year are freely offered for competition, the meaning of which is that the masters are willing to reduce their terms by that sum in the case of exceptionally clever pupils. But these exhibitions, being open to all, are often won by boys who do not really stand in need of them—whose very position has secured them the preliminary teaching necessary to win the exhibition—and, even when won, the exhibition is, at most, only a reduction of the terms; and a yearly sum, smaller or larger according to circumstances, has still to be made up by the pupil's friends. Something more than this is required to meet the case of the poor but clever boys and girls of whom so many are to be found in National schools; and, I think, it is not impossible to supply this want. The Commissioners have at their disposal a sum of over £100 a year, which is now given as the Carisle and Blake Prizes. It is a small sum, but it would give £10 each to assist ten deserving pupils, and if those pupils were selected with judgment, there are many Intermediate schools in the country that would be glad to take them for £10 a year each—as boarders—in view of the reputation likely to be acquired by their means. The selection of the pupils should be by strict competitive examination, carried out by the District Inspectors; who might be trusted with the duty of selecting a limited number of candidates in each district. The successful pupils or their friends should be at liberty to select the school to which they would go; and there should be no religious or other test imposed beyond

being of good character and within the limits of age. I cannot, of course, say whether the Government would be willing to set apart a yearly sum of money to assist in carrying out this scheme, though I think the payment of premiums to pupils in Model schools forms a strong precedent, but I have little doubt that, if the scheme were started, private subscriptions would be forthcoming to supplement the fund established by the late Lord Carlisle and Mr. Blake, which, I believe, would be more usefully employed in encouraging exceptionally clever pupils than in rewarding exceptionally skilful teachers.

*Appendix B.
Reports on
the State of
Schools.
Mr.
Fitzgerald.*

I have observed of late a tendency on the part of some teachers to complain of what they call the complexity of the school accounts, and the labour involved in keeping them. I have no sympathy with such complaints. The school accounts are now simpler, and entail less trouble on the teacher than they did twenty, or even ten years ago; and any changes that have been made have been rendered necessary by the introduction of the results' system, which has brought a large addition to the teachers' incomes. Results examination cannot be held without rolls and other documents setting out fully the actual state of the school, and the necessary details respecting each pupil. These rolls cannot be prepared without accurate detailed accounts carefully kept throughout the year. I do not maintain that the present system of accounts could not be improved, but I doubt if it could be much simplified without omitting some essential details. Take for example the summary roll, against which the clamour is loudest. We may transfer the details now shown upon it to the roll-book, but the details must still be made out, and when the teacher comes to fill his examination roll, he will have to collect these details in some such form as they appear on the summary; and it is really easier for him to do that month by month than all together at the end of the results year. But there is another aspect of the question which should not be overlooked. The inspectors have to check those accounts, and for an efficient check it is essential that the books should be kept in such a form as to admit of quick examination. Each teacher has one set of books to keep in the year; each inspector has some hundred and twenty sets of books to examine; and it is indispensable that the attendances of the pupils be somewhere shown in a collected form, otherwise no inspector could check them in the time at his disposal. As a matter of fact, the summary roll was originally intended to assist the teacher in making out his annual examination rolls; it was assumed that, at some time, the teacher would have to collect the pupils' attendances in order to ascertain those who were eligible for examination; and it was justly thought that the most convenient form in which to do so would be a sheet to be filled monthly, which would have only to be cross-totaled at the end of the year.

The summary roll has proved a very effective check upon an ingenious system of fraud, and I am thankful, for the sake of some teachers, not many, that it will still prove so; for though transferred to the roll-book it will continue to be a summary roll in reality—only entailing somewhat more trouble on the inspector to examine. I am happy to say that I believe the great majority of the teachers—I might say almost all—keep their school accounts with accuracy and fidelity—some of them under circumstances of great temptation to the contrary—and I believe that the clamour against the accounts does not proceed, in any great degree, from such teachers.

I have the honour to be, gentlemen, your obedient servant,

M. FITZGERALD, Head Inspector

The Secretaries, Education Office.

*Appendix B.*Reports on
the State of
Schools.*Mfr.*
*M. Keenan.***Mr. M. KEENAN, A.R.**

Letterkenny, 3rd March, 1881.

GENTLEMEN,—In compliance with the request contained in your letter of 15th December last, I beg to submit to you the following Report of the schools in Letterkenny district for the year 1880.

Since my last Report this district has been enlarged by the parish of Inishkeel, containing 13 schools, having been added to it. As a compensation for this increase, two schools, Glenmaquin and Boltifree were taken from this district and added to the Strahane district.

There are at present 142 ordinary and four Poor Law Union schools in operation, but it contains neither Model, Convent, nor Evening schools. During the year, grants were withdrawn from three schools on account of the wretched cabins in which they were held, but in two of these cases grants were restored on a suitable house being procured. One of these new school houses, Gortahork, was rebuilt by a grant of £250 from the Commissioners with adequate local aid, and is at present one of the best schools in this county having been fitted up with every requirement.

I cannot report much progress in school building since my former report in 1878, as during this period only three new schools have been established, two of which are held in suitable houses, but the third is held in a thatched cabin which has only been recognized by the Board as a temporary school-room.

Of the 146 school houses 31 have been built principally by grants from the Commissioners, and are vested either in the Commissioners or in local trustees; 7 have been built by private individuals at their own expense, and the remaining 98 have been built from funds subscribed by the people of the locality in which the school is situated. The vested schools and those built by private individuals, are with one exception, good substantial houses fitted up with every requirement, as are also 74 of those built by local subscriptions, but 24 are thatched cabins utterly unfit for school purposes. These wretched houses are situated in localities where the people are miserably poor, and I greatly fear can never be replaced by suitable houses without external aid. These unsuitable houses are tolerated because, were they closed these poor localities would be deprived of all educational advantages.

Since my last Report the managers of two schools, Milford male and Letterkenny No. 2, have taken advantage of the provisions of Teachers' Residence Act, and have built two excellent houses for the principal teachers of these schools. In addition to these residences built at the public expense, the manager of Cashel No. 2 built a house for the teacher of this school at his own expense. In the case of Letterkenny male, the grant made by the Board to provide a residence for the principal teacher of this school has not been taken advantage of and I greatly fear will not be, as the manager to whom the grant was made has since resigned. I draw attention to these cases to show that in this district the managers of schools are beginning to see the importance of providing suitable houses for the teachers.

This is a subject that I do not wish to leave without drawing attention to the wretched state of a large number of the teachers of this district as regards dwellings. Many of them live in small thatched cabins similar to those occupied by the poor peasantry of Donegal, with an earthen floor, badly lighted, with no ventilation except the door, and consisting of two and in some cases of three compartments. Even of the more comfortable of the teachers, very few have a room separate from the rest of the family to which he can retire for study, so that when any teacher does take to self-improvement he is obliged to retire to the school-room.

Appendix B

Reports on
the State of
Schools.Mr.
M. Keenan.

One of the greatest difficulties teachers coming from other districts have to experience in accepting appointments here is that of procuring a suitable residence. In few places it is possible to procure a house for any rent however high, and consequently managers are compelled to appoint to their schools, either teachers residing in the neighbourhood or unmarried teachers who would be satisfied with lodgings.

I observe that there is a growing desire upon the part of many teachers in this district to become the owners of small farms, so that by farming they may increase their incomes. I generally find that teachers who have become the owners of farms never apply themselves to their studies with a view to improving their classification but spend the greater part of their time, outside school hours, in working upon their farms.

These teachers are neither good teachers nor good farmers; they are satisfied with imperfectly following the example of the neighbouring farmers in the cultivation of their farms and in manner, dress, and conversation they have a greater resemblance to agricultural labourers than to school teachers. There are 20 teachers of this class in Letterkenny district, and I believe only one has had any success as a farmer.

This class of teachers, and unmarried teachers, present the great obstacles to managers of schools to take advantage of the provisions of the Teachers' Residence Act. The only other difficulty is that of procuring a lease for an eligible site.

During the year I examined 145 schools for results fees, and one was examined by the head inspector for Carlisle and Blake premium. Of these schools 8 are for boys only, 8 for girls only, and 130 for boys and girls, or mixed schools. Of the mixed schools 19 are taught by female principal teachers, and the others by male principal teachers. At the beginning of the year there were 13 permanent assistants employed, but during the year 4 of these were discontinued, 2 on account of falling off in attendance in their schools, and 2 others resigned, but the attendance was insufficient to justify managers to appoint successors. About the end of the year 1877, to provide a sufficient staff in schools in backward localities in months when attendance was high, the Commissioners permitted managers to employ temporary assistants. There are at present 16 of these assistants employed. I am glad to be able to report that a much better trained class of young persons than first offered are applicants for vacancies on this staff. During past year, nearly all new appointments were filled up by young persons who had served as second class monitors. I shall in another part of this report point out the improvement that has taken place in the schools where these assistants are employed, and the great stimulus these appointments have given to the cause of education in the outlying portions of this district. The principle upon which temporary assistants are employed still commends itself to those interested in the education of the youth of this district. It has induced the teachers to make greater efforts, and I am glad to say with

Appendix B.
Reports on
the State of
Schools.

Mr.
M. Keenan.

some success, to secure more regular attendance of pupils. The children now in these backward localities come to school at a much earlier age than formerly, and I never find the teachers absolutely idle for want of pupils as I did before these appointments were made when I visited these schools in Spring or Autumn months. Still a great deal remains to be done to bring education within the reach of the large and scattered population of this district.

It is clear from the large number of children on the rolls of the schools as compared with the average daily attendance, and the number qualified by attendances to earn fees for teachers at results' examinations that the attendance is very irregular—I believe the most so of any district in Ireland.

The number of children on rolls, upwards of 12,000, is among the largest of any district in Ireland, whereas the number presented at results' examinations is among the smallest, being under 6,000. In addition I conceive that there is a considerable portion of the population who do not send their children to any school. In order to remedy this state of things two things require to be done—1st, we must make the teachers more efficient and increase their numbers; 2nd, we must increase the number of schools. The following analysis of population and schools will show the necessity for school extension.

I shall take up the different Poor Law Unions as the correct returns of population under this head is most accessible.—Letterkenny Poor Law Union has 35 schools for a population of 17,113; Milford Poor Law Union has 40 schools for a population of 25,819; Dunfemagh Poor Law Union has 21 schools for a population of 16,477; Glenties Poor Law Union has 34 schools for a population of 20,150. It will thus appear that we have only *one* school for a population of over 600, a number clearly too small, when we consider that this is a scattered population. In addition, the number of children in this district forms a larger proportion of the population than they do in almost any other part of Ireland. These schools in general have each an average attendance of less than 45, which shows that about one-third of the children are growing up without receiving any education. Should the entire children of this district attend school with ordinary regularity, the school accommodation would require to be increased by at least one-third. In dealing with this large non-school-going population, it must be remembered that we have to bring education within their reach for the first time, that is, neither the present generation of children nor their parents ever received any education. Some would solve this difficult educational problem by introducing compulsory education. I would not agree to such a solution, as I am convinced that by increasing the number of schools and making them efficient, by appointing teachers properly trained, will afford the surest and best remedy. I am supported in this opinion by my experience of the past three years—the attendance at the schools in these backward localities having been increased by 800 when they were improved in efficiency. There is another reason why compulsory education is not practicable here at present, that is a large number of children are so poorly clothed that they could not be admitted to any school.

The next question that will engage my attention is the teachers employed in the schools. There are at present a staff of 147 principal teachers, 25 assistants, and 50 monitors. The difficulty that was felt by managers of schools in this district of procuring properly qualified persons to fill up vacancies in the teaching staff has to a great extent been over-

come. In my former report I pointed out the unsatisfactory method that prevailed here, of filling up vacancies in the teaching staff by appointing young persons who had merely been advanced pupils but who had received no special training for the office of teacher. During the past year, of 19 new teachers that were appointed, 14 had served as monitors or pupil teachers.

Appendix B.

Reports on
the State of
Schools.Mr.
M. Keenan

The teachers of this district are very anxious in general to improve their classification, and the Teachers' Associations in most places have become Mutual Improvement Associations. It is to be regretted that they cannot receive some assistance in their studies from more distinguished scholars than their own body can supply. I attribute their want of success at our examinations to their want of skilful and careful preparation.

During the year four teachers, three males and one female, availed themselves of the provisions of the Teachers' Pension Act, and retired from the Board's service. The female teacher had been in the Board's service 43 years, one of the male teachers had served 40 years, the second 36 years, and the third 32 years. In the last we have lost the only connecting link in this district between the National schools and the system of Education which they superseded. This old man commenced life in 1828 as a hedge school master, entered the service of the Board in 1849, and retired from teaching in 1881 upon a pension of £35 per annum, having thus served as a public teacher for 53 years.

The subjoined table gives the classification of the principal teachers in this district—

I.,	5
II.,	9
III.,	27
Unclassed,	104
	12

It will thus be seen that two-thirds of the teachers in charge of schools are in the third or lowest class. I only gave the numbers in each grade of first class separately, as it is only in this class that a separate rate of salary is attached to each grade.

With regard to the small number of teachers in 1st class, I have to inform you that in 1877 there were only 2 teachers in higher division of 1st class in this district, since that year three teachers have been promoted to higher division of 1st class and 1 to lower division. It will appear strange that only male teachers have been promoted to higher division of 1st class, although I consider their programme of study comparatively much more difficult than the programme for 1st class female teachers.

The following table will show the number of pupils examined in the different classes at results' examinations held by me during the years 1878, 1879, 1880.

	(1878.)	(1879.)	(1880.)
Infants, . . .	1,118	1,495	1,465
I., . . .	1,015	1,243	1,350
II., . . .	851	895	988
III., . . .	801	750	674
IV., . . .	400	565	496
V., . . .	218	295	321
VI., . . .	161	205	192
VII., . . .	129	228	231
Totals,	4,491	5,778	5,717

Appendix B.

Reports on
the State of
Schools.Mr.
M. Keenan.

If we exclude from the numbers examined in 1879 and 1880, the numbers examined in the 13 new schools that were added to this district, we shall have remaining 5,378 and 5,317 respectively, or in round numbers 800 more children were examined in 1879 and 1880 than were examined in 1878 in the same schools. It will also appear from these tables that there was more than a proportionate increase in the numbers examined in senior classes especially in the sixth class. This great improvement can only be accounted for by the fact that the schools were better taught during the last two years than formerly, in most cases by the introduction of a sufficient staff of teachers when the attendance increased, and in a few cases by replacing inefficient by efficient teachers. I shall here give examples of two schools of the latter class, where inefficient teachers have been replaced by efficient teachers, and I may remark that to have a knowledge of the Irish language is not necessary for a teacher who may be appointed to a school in an Irish-speaking locality, as these two instances will show. Both these young teachers were trained as monitresses in the Baggot-street Convent National school in Dublin and had no knowledge of the Irish language, and I believe had never heard a word of Irish spoken till they took charge of their schools in the wilds of Donegal. I think it right also to add that these two schools have not increased in attendance at the expense of other schools in their neighbourhood, for I also observe an improvement in the latter during the same time.

In school No. 1 average attendance before present teacher was appointed was 36 and £7 10s. 9d. amount of results' fees earned; in 1880, average attendance at same school was 68, and amount of results' fees earned was £31 10s.

In school No. 2 the average attendance has increased from 35 to 53 in the same period, and the amount of results' fees earned has increased from £6 4s. to £24.

I quote these two instances to prove that a teacher who has no knowledge of the Irish language need have no difficulty about accepting an appointment in an Irish-speaking locality. Having devoted so much of this report to matters other than actual school work, I shall now offer a few suggestions regarding the teaching of the various subjects of the school programme, and I deem it proper to remark that where so large a proportion of the teachers are in the third or lowest class, we must be satisfied with mechanical rather than intellectual teaching.

Reading in general is fluent, but that is all I can say in its favour. Pronunciation is bad, except in the schools taught by teachers of 1st and 2nd class. Pupils are not familiar with subject matter of reading books and there is not in the greater number of schools any attempt made to make the pupils understand the subject matter of the lesson by a system of intelligent questions and answers. The teacher is satisfied if the child can read the lesson fluently, and is familiar with the meaning of the words in the vocabulary at the beginning of the lesson.

Spelling.—Oral spelling and dictation receive a great deal of attention both from teacher and pupils, and I am glad to be able to report an improvement.

Writing.—This important branch is now taught with more skill and success than formerly. Teachers upon the whole in this district select the copies for their pupils with judgment, and exercise fair supervision over the exercises of their pupils. The written exercises of pupils at examinations have greatly improved.

Arithmetic.—In the junior classes I find in many cases pupils are

deficient in Addition, Subtraction, and Multiplication tables, although the pupils almost invariably know how to work the exercises set to them. In the senior classes the pupils can work sums of considerable difficulty in the various rules prescribed for their respective classes. But I am not satisfied with the proficiency of the senior classes in the theory of arithmetic. Pupils will work questions with ease and accuracy in such and such a rule, but they seldom understand the reason of the rule they employ. This is greatly to be regretted, as the value of learning arithmetic as a mental exercise is lost to the pupil. When examining schools for secondary reports, I made my examination on arithmetic to a great extent an examination upon the theory of arithmetic.

Grammar and geography in most of the schools are badly taught. Grammar is taught as defining moods, tenses, &c., without apparently any ulterior object, and geography as an exercise of the memory in remembering names. I have endeavoured to counteract the bad teaching by requiring pupils to point out places on the maps, or describe accurately their relative positions.

Extra branches.—There has been a falling off in the extra branches taught, and in the number of schools in which they are taught since my last Report. Some of the teachers who had been teaching extra branches in their schools did not present themselves at the examination held last year, to obtain certificates of competency. In two instances at least this is to be regretted as two of the teachers who had been teaching classics in their schools proved their competency by the success of their pupils at the matriculation examinations in Queen's College, Belfast.

The extra branches taught at present are, algebra and geometry 1st and 2nd courses, book-keeping, drawing, music, and sewing-machine.

I am, gentlemen, your obedient servant,

M. KEENAN, District Inspector.

To the Secretaries, Education Office.

Mr. ADAIR, A.M.

Mr. Adair.

Coleraine, March 1881.

GENTLEMEN,—In compliance with your instructions, I beg leave to submit the following as my general report on the schools of the Coleraine District, for the year ended 28th February last.

1. The area of the district is the same as when I furnished my last general report, two years ago, and there has been but little change in the number and circumstances of the schools in the meantime. Three new schools have been added, viz.:—Ballintoy No. 1, Ballintoy No. 2, and Agherton, all in county Antrim, and all non-vested. The Ballintoy No. 1 and Agherton schools were formerly in connexion with the Church Education Society. Ballintoy No. 2 is a new foundation, the house being built at the landlord's expense, to meet a want that was felt in the place. One school, Ballymagarry, county Antrim, was struck off the roll during the past year, as the attendance of pupils was quite too low to warrant continuance of the grants, and as the teacher had been guilty of falsifying the school accounts.

2. There are at present 143 schools of all kinds in the district, of these 18 are vested in the Commissioners in their corporate capacity,

Appendix B. 9 are vested in trustees, and 116 are non-vested; and they may again be classed thus—6 model schools, 3 Poor Law Union schools, and 134 ordinary National schools. Four of the schools at present on the roll are inoperative, viz.:—Ballyverdock F., V.C., on “suspended list,” Breen M., V.T., on “suspended list,” Armoy M., non-vested, closed owing to small attendance, and Ramoon (building) V.C. Armoy M. and Ramoon (building) are likely to be removed from the roll, the former because the number of boys now attending the female school is not likely to increase to such an extent as would warrant the manager in reopening it under a male teacher, and the latter (Ramoon B.) because there is no probability (owing to a change in the proprietorship of the Ballycastle estate) of the building being proceeded with. The Ballyverdock F. school has been reopened recently under a female teacher, and the manager has applied to have the reopening sanctioned on the ground that owing to the closing of other schools, not National, in the locality the attendance of females will be found sufficient to warrant salary to the teacher.

*Reports on
the State of
Schools.*

Mr. Adair.

3. There is ample school-room accommodation in the district for all the children of a school-going age. In fact in some localities the schools are too numerous, which has the effect of making the attendance small in many, and does not tend to the increased efficiency of any. The school houses are in general good and well adapted for school purposes. Not one school-house in the district is thatched, and not one has an earthen floor. The furniture and apparatus too are in general sufficient, both in quantity and quality, and I had but very few cases in which the supply of requisites for sale to the pupils was defective.

4. In general the teachers live in respectable houses, such as becomes their social position. Since I last reported the “Teachers’ Residence Act” has been taken advantage of in two additional instances, Killowen school, Coleraine, has had a residence for the teacher provided near it, and so has Gorrin school, both in county Londonderry, the former on Sir H. H. Bruce’s property, and the latter on that of Colonel Hugh O. Lyle, Moville. In no instance does the teacher pay rent for the school-house. Twenty-six schools have free residences for the teachers attached. It is still matter for regret that the Teachers’ Residence Act is so little availed of. In some cases I know there are legal difficulties in the way—such as validity of title to proposed sites; but in the majority of cases there seems to be a great degree of apathy in the matter on the part of the teachers themselves.

5. The attendance of pupils is fairly regular. In this respect this district will compare favourably with most other rural districts in the country. I find the percentage of attendance to 100 on rolls to be 70·8, which I look upon as being higher than the average. Of course the great majority of the population of the district being of the farming and labouring classes, the attendance is very much affected in spring time and harvest by the more grown children being kept at home to assist at field work. But all things considered, I am agreeably surprised to find so many to make the required number of attendances to qualify for the results examinations. I observe the greatest eagerness on the part of the pupils to accomplish this. It not unfrequently happens that pupils who have been kept at home owing to illness, will at great risk to their health, present themselves for examination. As a rule the parents of the pupils are in comfortable circumstances and can afford to keep them longer and more regularly at school than is the case in many other districts. It is no uncommon thing to find pupils who had

made nearly the required number of attendances returning to school after long absences, to make up the 100 days, shortly before the time for the annual examinations. Such pupils are, of course, the most likely to be and are, among those who fail.

Appendix B.
Reports on
the State of
Schools.

Mr. Adair.

The percentage of pupils who made 100 attendances to the number on rolls is 60·6, and the percentage of those who were present and examined for results fees to those who made the attendances is 93·7, therefore of those eligible for examination only 7·3 per cent. were absent, I think it is as much as could reasonably be expected.

6. The total number of pupils examined for results during the year was 6,402, or an average of 46·7 per school.

7. The total school fees received, omitting model schools, was £1,087 6s. 10½d., or an average per school, omitting model schools and Poor Law Union schools, of £8 10s. 9½d. The results fees amounted to £2,461 2s. 7d., or to an average per school, omitting model schools and Poor Law Union schools, of £19 13s. 9½d. There are 44 schools with local endowments which vary from £2 to £20 a year. The total amount of such endowments for the past year was £384 10s., or an average per school of those in receipt of such local aid of £8 14s. 9½d.

8. The teachers of this district are a very respectable body of public servants, well conducted, sober and devoted to their work. Many of them are in very comfortable circumstances, with small farms conveniently situated, which they can leave managed without any interference with their school work. It is but seldom that one hears a teacher expressing himself as anxious to leave the service of the Board. Those who do so are generally young men who desire to get into the Civil Service, as Clerks in the Customs, Inland Revenue, or other Government offices. And indeed so many of them succeed in this direction that this branch of the public service may be said to be largely recruited from the ranks of our junior and assistant teachers, pupil teachers and monitors.

9. On the whole the proficiency of the pupils examined for results last year was fairly satisfactory.

Reading.—The reading is generally very fair as to ease and intelligence. Few failures in this subject occur in the infant's, first, second, fifth and sixth classes. There are more failures proportionally in reading in the third and fourth classes than in the other classes. I attribute this in great measure to the fact that many pupils in virtue of their "passes" in the lower classes get into third and fourth classes too soon, and before their minds are sufficiently matured to comprehend the subject matter of the reading lessons in these books. Explanation of lessons, and especially of the poetical pieces recited, is in general very poor, and the mere repetition of the pieces the pupils profess to know often very unsatisfactory; sufficient care is not taken at the outset—either by the teacher or the pupil—to see that the words and pauses of the text are properly taken up by the eye and apprehended by the understanding. A piece of poetry committed wrongly at first is seldom recited with thorough correctness afterwards. The teachers should give more attention to this matter, and to the development of the reading lessons generally. They (the teachers) do not seem to study this part of their business sufficiently. They do not "make up" the lessons themselves, and the consequence is that when they are put to examine a class on a reading lesson the most of the time is taken up by them in searching for questions, or in asking others which are of no worth.

Spelling.—Oral and from Dictation.—I have almost nothing to complain of under this head; the pupils of the junior classes as a rule learn to spell

Appendix B
Reports on
the State of
Schools.

Mr. Adair.

correctly the words given at the head of the lessons, and they also give their meanings tolerably correctly. Dictation (writing from) is extensively and successfully practised in the fourth and higher classes the knowledge that the pupils of these classes are required to write from dictation on paper from the reading of the Inspector at the results examinations has a good effect in this regard. I must however at the same time, say that the writing of letters off-hand, on a given subject, by the pupils of the sixth class has not yet reached any great degree of proficiency. Few of those submitted to this test ever fill a page of the exercise paper with their composition. They can reproduce in an original form but little of what they may have acquired from reading or from observation. But this is of course greatly owing to want of practice. I do not believe they are sufficiently exercised in the production of original composition.

Pennmanship.—The writing of the pupils in most of the schools is respectable, and I have observed latterly that the copy books are cleaner and more neatly kept than formerly. One defect I have frequently met with, and it is a great one, namely, the absence of correction by the teacher or monitor where mistakes have been made; misspelled words are to be seen often running down half a page. A mistake is made and in the next line, the pupil copying from the last line written, rather than from the head line, repeats the misspelling probably to the end of the exercise, unless the mistake is pointed out and corrected. The months of the year are frequently misspelled on the last line of the page. I have recently found, for instance, the month of February, written "Febuary" during the entire month without apparently having been noticed by the teacher. I need not say that in all such cases I have pointed out the neglect to the teachers.

Arithmetic.—Practical arithmetic continues to be taught efficiently, especially in the junior classes. It is in the fifth and sixth classes that failures in proportion to the numbers examined have been most numerous. The questions for these classes are generally I believe considered rather difficult. I consider myself that those for sixth class especially are too hard. Notation and numeration are efficiently taught, so are the necessary tables. The theory of arithmetic is but indifferently taught. It is almost all practical work at the results examinations, and it is only at secondary inspections that the Inspector can take sufficient cognisance of this part of the teaching in arithmetic.

Grammar.—I find but little improvement as to the knowledge of grammar possessed by the pupils of the schools since I last furnished a general report. The third class pupils are seldom found to be able to distinguish *all* the parts of speech readily in an ordinary sentence of their lesson book. Indeed they get into third class now at so early an age that it is not to be expected they can know much of grammar. Fourth class pupils are also generally weak in grammar. Fifth and sixth classes can generally parse a sentence syntactically with creditable correctness, but their knowledge of the text of the grammar is limited indeed. I do not believe they apply themselves sufficiently to "home lessons" in grammar.

Geography.—I am still dissatisfied with the pupils' attainments in geography. The pupils of third class can for the most part point out places on the map of the World pretty well, and so as to secure a pass of some kind in this subject; but beyond third class there are very many failures. In hardly any school can it be said that the sixth class pupils possess a thorough knowledge of the British Empire. The definitions are in general pretty well known.

Needlework.—Plain sewing and knitting are very fairly and very generally taught in all the girls' schools, and in mixed schools having a female assistant or workmistress. In such schools all the pupils above first class learn plain sewing at least, and the proficiency in both sewing and knitting I found satisfactory. The sewing machine is making its way into some of the best female schools, and with success.

Appendix B
Reports on
the State of
Schools.
Mr. Adair.

Agriculture and Book-keeping are now taught in more schools than formerly, but still these subjects do not seem to have much attraction for the pupils; I believe they are taught more because that under certain conditions they are now compulsory, than from any real desire to acquire a knowledge of them.

Extra Branches.—A fair proportion of the pupils of fifth and sixth classes learn mensuration, geometry and algebra, and with fair results.

Singing or vocal music is taught with very fair results in a good many schools.

Drawing is not making much way, and it is to be found efficiently taught in town schools only.

On the whole I think satisfactory progress has been made in the schools generally during the past year.

I am, gentlemen, your obedient servant,

S. ADAIR, District Inspector.

The Secretaries, Education Office, Dublin.

Mr. D. J. ROANTREE.

Ballymena, 26th March, 1881.

Mr. D. J.
Roantree.

GENTLEMEN,—I have the honor to submit for the information of the Commissioners the following general report for the past year on the schools of this district, of which I have been in charge since June, 1878.

The district is entirely in the county of Antrim, and comprises about 700 square miles. Approaching the lower Bann on the west, and having for part of its eastern boundary the line of coast extending from Cushendun to a point nearly midway between Glenarm and Larne, it stretches in a south-westerly direction about forty miles, from a short distance north of Cushendun to Lough Neagh, a little south of Randalstown, and its greatest breadth is about twenty miles. The great majority of the schools are crowded together in the southern half of the district; the northern half, which consists in the main of thinly inhabited mountain and moorland, containing but few schools. These are found either in the glens or other fertile strips of land by which this otherwise nearly barren tract is intersected, or in the villages situated where the glens open upon the sea. The district includes, besides the town of Ballymena, having, with its suburb of Harryville, a population of 10,000 inhabitants, the towns of Antrim, Randalstown, Glenarm, and several considerable villages. The occupation of the people is for the most part agriculture, varied in the north by working the iron mines which abound in the hill country, and in the south by the manufacture of linen, carried on chiefly by hand loom weaving. Most of the weavers are also cultivators of small patches of land and many of the larger farmers are linen merchants as well.

C

Appendix B
Reports on
the State of
Schools.

Mr. D. J.
Moore.

In April, 1879, seven schools in the south-west of the district were transferred to the districts of Cookstown and Maghara, and eleven schools in and around the town of Antrim were added to this district from that of Carrickfergus. The seven schools taken away had an aggregate average attendance of 471, the aggregate average attendance at the eleven added being 575.

This district contains now 138 National schools which are classed as follows:—

Model	.	.	.	3
Ordinary	.	.	.	129
Poor Law Union	.	.	.	2
Evening	.	.	.	4

With the exception of one evening school, all these are in operation, and the average attendance per school is fifty.

In the 134 day schools the number on rolls at the time of examination for results in the past year was 11,733; the number that gave at least one attendance in the last fourteen days immediately preceding that examination 9,422. The number of distinct pupils attending the National schools of the district may then be fairly set down at 10,000. For the instruction of these 10,000 children there is a staff of 134 principal teachers and 48 assistants. Of the principals, 83 are males and 51 are females, 26 of the latter being in charge of schools having a mixed attendance of boys and girls; and of the 48 assistants, 43 are females. Women thus constitute a majority of the teaching staff of the district.

Of the 134 principal teachers, 32 males and 31 females, or nearly one-half, are untrained; and only 10 of the 48 assistants have been trained, although many of them have served as monitors or pupil teachers.

The average incomes of the teachers are:—

	Males.		Females.	
	£	s.	£	s.
Principals,	63	12	55	15
Assistants,	58	2	35	19

The entire staff of 182, £54 10s.

Deducting the incomes of the model school teachers, these averages are as follows:—

	Males.		Females.	
	£	s.	£	s.
Principals,	62	5	52	17
Assistants,	48	13	35	10

The entire staff of 176 ordinary school teachers, £53.

Excluding the model schools, only seven National schools in the district have teachers' residences connected with them. But two of these can be regarded as suitable, and they have been erected from grants made under the recent Act of Parliament. The difficulty of procuring sites appears to be the chief reason why the provisions of this very liberal Act have not been more largely availed of.

The number of pupils qualified by attendance within the past year, for results examinations was 6,937, and the number of these actually examined was 6,523.

It appears, that taking 10,000 of the nearly 12,000 on rolls as representing the number of individuals who received instruction in the National schools of the district within the year, the large number of 3,477, or more than a third were, owing to irregularity of attendance ineligible for presentation at examination; and again, that of the entire

number examined 72·7 per cent., nearly three-fourths were in junior division, that is in the third class or those below it. It is evident that the small farmers, weavers, agricultural labourers, and miners, who constitute the great bulk of the parents, send their children very irregularly to school, and remove them from school at a very early age. Under existing circumstances it would I believe be hard to expect them to do better, and I regret to add, I can see no reasonable ground for hoping that the near future will bring any improvement on this unsatisfactory condition of things.

Appendix B.
Reports on
the State of
Schools.
Mr. D. J.
Keatinge.

With rare exceptions the teachers and managers are doing all in their power for the progress of the schools; and much useful educational work is done in the district, still, taking as a standard the official programme of instruction, the literary condition of the schools on the whole must be reported as decidedly low.

Reading.—Even in the senior classes, verbal accuracy is usually the highest quality that characterizes this exercise. Few pupils read as if they understood, and fewer still understand and remember what they read. Only in some of the best schools is there any evidence of an earnest effort to impart a knowledge of the subject-matter of the lesson-books, and not even in such schools is the effort always successful. Teachers complain that the branches embraced in the programme are so numerous, there is not sufficient time available for reading. Hence, it was a common practice throughout the district to devote no more than half an hour a day to reading in the senior division. Then, it is said that, notwithstanding the recent alterations for the better that have been made in the reading books, many of the lessons are still too difficult for the respective classes, besides being otherwise unsuitable. As regards both programme and lesson books, experience convinces that these complaints are not devoid of foundation.

Spelling.—Good; is fair generally, yet there is much room for improvement in the way of conducting the writing from dictation, particularly in the mode of correcting the exercises.

Writing.—The quality of most of it is inferior. While decidedly bad in but very few schools, not many have attained a high degree of proficiency in this branch.

Arithmetic.—Practical arithmetic is very fairly taught. Little attention is given to the *rationale* of the subject. Hence in processes calling for any exercise of judgment on the part of the pupil, failure is almost universal.

Grammar and Geography.—The teaching of these subjects may be set down as little better than nominal. Parsing is very poor indeed; and instances of successful letter-writing in sixth class are extremely rare.

For some time the conviction has been forcing itself upon me that at least in Geography our programme is too ambitious. I am strongly inclined to the opinion that, save where it may be thought desirable to introduce Physical Geography as an extra subject, the formal teaching of geography should cease after the mere "outlines and general features" of the map of the world and of the continents, together with the geography of Ireland and the leading facts of Physical and Mathematical geography had been mastered. And this, according to the sense in which I use these several terms, could be done by the time a pupil reaches the second stage of fifth class—and that all further necessary knowledge of local geography might be imparted in less time, as well as more agreeably and effectively, by means of reading lessons in simple and interesting narratives of travel and adventure, the pupils being required to point

Appendix B. out on the map, and describe the situations of all places mentioned in the lessons. Should it be preferred, the reading could be done at home, and the exercise in school limited to an examination on the subject-matter, accompanied by the necessary references to the maps.

Mr. D. J. Roantree. *Extra Subjects.*—Algebra has been taught with some degree of success; Geometry, very unsuccessfully. In the schools here I have met very few boys capable of following the line of reasoning in the larger demonstrations contained in the first book of Euclid and these few without an exception that I can remember were above the age of fourteen.

Singing in the schools is for the most part harsh in tone and rude in style; and the slight knowledge of the theory of vocal music required by the programme is rarely attained. Outside the Model school, the teaching of drawing is merely nominal save in one or two instances.

In conclusion I would observe that, my aim in the preparation of this report has not been so much to draw conclusions or offer suggestions, for which indeed the numerous avocations of an Inspector of National schools leave him but scant leisure, as to collect and present a few suggestive facts which for the most part speak for themselves.

I am, gentlemen, your obedient servant,

D. J. ROANTREE.

The Secretaries, Education Office, Dublin.

Mr. J. G. Macnamara.

MR. J. C. MACNAMARA.

Donegal, 25th February, 1881.

GENTLEMEN,—I beg to submit, for the consideration of the Commissioners, my General Report on the schools of this district, which has been under my charge since the 1st May, 1879.

The district may be said to consist of two parts; one, which comprises the whole of south-western Donegal, extends from Donegal town westward as far as Glen Head, a distance of about 40 miles, and is washed along its entire length by the waters of Donegal Bay. On the west it is bounded by the Atlantic and also on the north as far as Ardara (18 miles from Donegal) whence an irregular line of low hills—broken at intervals by gaps—runs inland, passing about 4 miles to the north of Donegal through Barnesmore, which is the north-eastern limit of the district. These hills form the northern boundary except at one point; going from Killybegs to Ardara I pass through one of the gaps—locally known as the “Nick”—to inspect the schools situated in the parish of Inniskeel, which forms one of those low-lying peninsulas so conspicuous on the west of the county.

The other portion of the district extends in a south-westerly direction along the sea-shore from Donegal to Cliffooney, about 24 miles, and is very irregular in form. The schools are mostly built on a strip of coast about half a dozen miles in width. Several, however, are situated on the main road from Ballyshannon to Pettigo, beyond which the district extends eight miles and embraces three schools. The town of Donegal is not, in an exact sense, the centre of the district; it is the point towards which the two parts, which form the district, converge.

In the northern portion, the distribution of schools accords fairly with the distribution of population. There are a few exceptions, chiefly cases

where one good school would meet the requirements of a locality better than several small middling (I cannot say bad) ones. In one instance where the distribution of food during the recent distress induced a considerable increase in the attendance, which is still maintained, the accommodation is now scarcely sufficient. A couple of years ago the school-house was enlarged sufficiently to accommodate 150 pupils, but during and since the winter of 1879 the numbers have, on many occasions, risen to 200 or more. On fine days large classes can be taught in the play-ground, the school being situated in a rather remote neighbourhood, but in bad weather the appearance of the children huddled together in corners, frequently with dripping garments, is anything but cheerful.

In the southern portion of the district there is a large tract of country, which I have been credibly informed is thickly populated, without any school; while the towns and the neighbourhood of the towns and a fertile strip of sea-coast are studded with schools, one-third of which lead an unhealthy existence and at best are barely tolerable. All the evils noticeable wherever congestion of schools occurs, are visible here—incoefficient teachers, ill-kept school-rooms, low averages, listless pupils, deficiency of school-fees, unsatisfactory general results. I must say that many of the schools in this part are efficiently conducted—a good teacher will make a good school in spite of many difficulties—but it is certain that the drawbacks incidental to all schools become more prominent and are more difficult to hold in check wherever the tendency to increase the number of schools unnecessarily prevails.

Deficiency of school-fees is one of the worst features in such places, and one which is the source of many other serious evils. In the remote parts of the district not many people are willing to pay for their children's education; the greater number think they confer a favour on teachers by sending their children to school for gratuitous instruction, as they consider the teachers sufficiently rewarded by whatever the pupils may earn for them in the shape of results fees. Hence when teachers insist upon their rights and demand school-fees, the pupils are probably withdrawn, and very frequently, I regret to say, a neighbouring teacher will be found so deficient in professional spirit as to admit these children free, thereby gaining little in reality, as the parents are sure to become indifferent and the pupils very neglectful of school duties. The former, value education only in proportion as they have to pay for it; when it costs them nothing the children are not properly looked after, the merest trifle serving as an excuse to keep them at home; on the other hand, if they have to pay school-fees in proportion to their means—and the poorest can afford a couple of pence a month—they are sure to get value for their money and to see that the children attend school, except when their services are very much needed at home.

There are in operation in the district at present 138 National schools, two of these being Convent and two Poor Law Union schools. Of the school-houses eighteen are vested in the Commissioners and fourteen in Trustees. Those vested in the Board are good substantial buildings and are usually kept in a thorough state of repair. With regard to their construction it may be allowable for me to make one remark in this place. The windows are always placed so high as completely to exclude any view of the external world, in order as manuals on the art of building school-houses say, to prevent the pupils' attention from being distracted during school-hours by external objects. To carry out this principle in the building of rural school-houses appears to me to be a mistake. The necessity of carrying it out in towns, where the children

Appendix B.

Mac-
mura.

Appendix B.
Reports on
the State of
Schools.

Mr. J. C.
Alcock.
1879-80.

are liable to be frequently distracted, may seem to exist, but surely, in remote country places, where objects of interest are like angel's visits, nothing can excuse a fashion that makes schools appear like gales, especially to those confined in them for several hours each day. In my opinion the windows ought to be placed low enough to allow children, when standing, to catch a glimpse of the outside world; a look at the green fields now and again, or even the sight of the mail car passing once a day would prove more beneficial than otherwise, as tending to relieve the monotony of five hours continuous work and close confinement.

The school-houses vested in Trustees are at the outset built substantially, and on the most approved principles, but too frequently they are allowed to fall into bad repair, as the Trustees rarely take any interest in them and managers are unwilling to be held wholly responsible for their condition. When neglected they present a far more disreputable appearance than the worst of the ordinary non-vested school-rooms, which are generally buildings of the same type as the dwellings that surround and supply them with pupils. These non-vested houses are, as a rule, kept in good repair, warm and comfortable. Most of them are slated and have boarded floors.

About half a dozen are unfit for school-rooms, being small, badly-lighted and badly-ventilated cabins. These, however, are being gradually replaced by better buildings; I expect the worst will be superseded by a commodious new house before the end of spring.

The schools are for the most part supplied with efficient and suitable furniture. Wherever rickety desks and unsteady forms are to be met with they are generally found to be accompanied by several other drawbacks, all of which spring from the same source, namely, carelessness on the part of the teacher.

A zealous teacher will not brook these minor evils, which can always be remedied by a little thoughtfulness and exertion. Such a one will be sure to have the desks firmly fixed in the most suitable positions, the maps and tablets properly suspended, the book press and teacher's desk neat and orderly, the ceiling, walls and floor clean, the windows bright and capable of being easily opened. A teacher who pays attention to these matters and who personally sets an example of neatness and order, will rarely find it necessary to speak directly to the pupils regarding their personal appearance. They are quicker to act from example than from precept, and will be ashamed to be found wanting, when they see a high value placed on order and neatness, whereas laxity on the teacher's part is sure to beget still greater laxity in the pupils. Every teacher knows how important strict attention to discipline, order, and cleanliness is in the education of children, and every honest teacher will strive to remedy any deficiencies in these respects observable in the school-room, the pupils, or himself.

As illustrations of these principles (among others), I have before my mind at present two schools situated in the same parish, little more than two miles apart. Enter one of them any time during school hours. The house may be crowded but even to one coming out of the open air the sense of freshness, as compared with the air of other schools equally crowded, is quite noticeable. Order and cleanliness are visible everywhere. The pupils are bright, joyous and healthy-looking, and are working in strict accordance with the time table. A pleasing murmur is heard, but no voice predominates—least of all the teacher's. One can see at a glance that good work is being done and that both teachers and pupils have their hearts in the work. Enter the other school. It was swept and dusted probably some ten days or a fortnight ago. Books, caps, and shawls are scattered about promiscuously. All the windows are closed,

the air, if the room be filled, being hot and unwholesome. Everything in the appearance of school-room, teacher, and pupils betokens want of attention to order and cleanliness. Should the teacher happen to be engaged with a draft, his voice predominates over every other. One division, probably all the pupils with whom he is not directly engaged, are lounging at the desks, nominally employed but really idle. Call teachers attention to neglect of time table and practical rules, to defects in order, discipline, and cleanliness, and excuses in abundance are forthcoming. The amount of energy and volubility with which he is certain to excuse himself, if previously directed in a proper manner would have obviated the necessity for any excuse. I dwell particularly on these two cases because, though so near, they are types, in one way or another, of all I meet with in this district. Not a few schools are as good as the first mentioned. I cannot call to mind any other quite as bad as the last. In conclusion I may add that sickness (scarlatina, I believe,) was prevalent in the neighbourhood of these schools during the early part of last year. It might be going too far to say that want of attention to cleanliness, &c., caused the sickness which carried off several children from and necessitated the closing of one of them for a considerable period. The other was not closed for one day. I believe that not a single case of sickness occurred amongst the children attending it.

Except in the Convent schools and a few others, reading is not successfully taught. The pupils are generally able "to pass," that is they can syllable accurately and without grievous mispronunciation all the words in a sentence or two; but fluency, proper attention to punctuation, and intelligent rendering of the meaning are not to be looked for even in the highest classes. The reason of these defects can be easily traced—indeed the reason of the teachers' ill-success in teaching reading will be found to be, at bottom, the reason of their failures (when they do fail) in any branch of school-keeping.

In the selection of teachers, managers are guided chiefly by local influences. Were they ever so willing they find it very inconvenient to look for a teacher beyond their own or a neighbouring parish. Consequently faulty methods of teaching are perpetuated, for granted that the most eligible person is selected, who may have served a full term of first or second class monitorship, and passed all the examinations creditably being well prepared amongst other subjects in the methods of teaching; nevertheless, such a person is certain to inherit and perpetuate all the faults to which, under his own teacher, he may have been accustomed. The "Handbook of School Management" is learned for the examination in too many instances, as if the matter therein contained had no connection with the practical working of the schools, just as the majority of pupils who learn the outlines of agriculture would, so far as I can discover, as soon think of applying the rules of syntax to the working of their fathers' farms as the lessons learned from the "Introduction to Practical Farming." In both cases the reason is the same. Unless when directly forced to it, neither teachers nor pupils will bring to bear on their daily work the lessons they are at such pains to learn. Unless a teacher be very earnest and devoted to his business, he finds it extremely difficult to abandon long-continued habits and to apply successfully principles learned from a book to the actual working of a school. The surest remedy in the case of the teachers appears to be a course of training wherein they might be gradually and, as it were, unconsciously accustomed to the best methods of teaching, by having daily before their eyes and by taking continuous part in practical illustrations of those methods.

One great aid to the successful teaching of reading is very much neglected

Schools.

Mr. J. C.
Mason—
1879.

in the schools—I mean the learning and the repetition of the poetical pieces. As a rule teachers form an erroneous idea of this subject and of the reason of its introduction into the programme. In most schools it is totally neglected throughout the results year, but coming on towards the examination teachers and pupils wake up to the necessity of preparing the poems, and the requisite number of pieces are hurriedly learned—crammed, as the expression is—within the shortest possible time. It is no unusual experience to be told by a teacher in the middle of a results year that the pupils have not begun to learn the poetry yet, but that he hopes to have them thoroughly prepared on the subject before the results examination. Surely, in such cases, the whole meaning of the requirement is lost and it would be better for teacher and pupils, having omitted the subject so far, to neglect it altogether during the remainder of that year. The meaning of the poetical requirement I take to be thus, to render the teaching of the prose lessons more easy by accustoming the pupils to distinct and accurate pronunciation, to intellectual rendering of the subject matter, and to some elegance of expression.

Take for example the fourth class. The pupils of this class have to be prepared in six poems. Instead of leaving the subject to the end of the results year, the poems should be committed to memory at the beginning; the teacher taking care to explain thoroughly every poem before the pupils learn it. Even if they are preparing different pieces this will involve little extra trouble. By learning one poem weekly the required number will be known at the end of six weeks; then frequent repetition will be found of high value. If a pupil can repeat the poems accurately, distinctly, and intelligently, if he understand and can explain them thoroughly, it is reasonable to expect that an otherwise unattainable amount of precision and intelligence will be brought to bear on the learning of the prose lessons, and that faulty methods of reading can be more easily perceived and checked than otherwise they could be. Furthermore, the poetry may be made to subserve the teaching of several other subjects besides, reading—for example, phrase-spelling, writing and grammar. To copy out in their neatest hand writing for exhibition at the results examination all their poetical pieces would be a most beneficial home exercise for the pupils of any class, the poems might also be used as a touchstone for their knowledge of grammar. An earnest intelligent teacher can turn this subject to very great advantage in many ways.

Writing is taught with a fair amount of success; still great improvement is needed, which would be soon effected, if teachers were to put in practice the rules for teaching this subject, to be found in the ordinary books on method. Many teachers content themselves with supplying the pupils with paper and pens; few superintend the writing lessons; fewer still examine the written copies, and point out the defects. The copy books also are, in too many instances, kept in a careless, slovenly fashion.

In Arithmetic the proficiency is generally satisfactory. The junior pupils are sometimes deficient in knowledge of the tables; the pupils of first class especially, whom I expect to be able to add three numbers (e.g. $7 + 9 + 6$) mentally, and with rapidity; while the seniors very frequently fail in mental arithmetic. The theory of arithmetic is much neglected in most of the schools.

Grammar and Geography are well taught in a few of the schools; in most however the proficiency in these subjects can only be classified as "middling." They are taught too much by rote; inexperienced teachers, failing to see that knowledge acquired in this way is almost useless, are surprised when, at examinations, their pupils are unable to

answer simple questions, when not put in the exact words of the text books. In teaching these and kindred subjects, when the intelligence of the pupils needs to be cultivated and developed, what the teacher does is a small matter in comparison with what he causes the children to do. Many an earnest, hard-working teacher, who trusts over-much to the memory of his pupils, fails in comparison with a less energetic, though more skilful person, whose aim is to educate, rather than to instruct, to draw forth and cultivate the best powers of his pupils, rather than to implant various kinds of knowledge in perhaps unsuitable soils.

Appendix B
Reports on
the State of
Schools.

Mr. J. C.
MacNamara.

Needlework and Knitting are not in such a progressive state as one would wish. In large mixed schools, when the services of an assistant can be procured, the girls can usually sew and knit well; but there are very many small schools under male teachers, when they do not enjoy the benefit of instruction in branches to them so important.

The School accounts are, for the most part, kept honestly and accurately, but neatness is too frequently neglected. I have had to report only one gross case of falsification.

The paid monitors of this district, form a very important class; this being the class from which new teachers are principally selected. Next to a proper course of training, the best preparation for a teacher is to spend a few years as monitor in a good school. I am always anxious to discover a candidate, who has had that advantage, when I have anything to do with the selection of a teacher. There are, however, a few schools, where the instruction imparted to monitors is of doubtful quantity, as well as quality; for the future, I intend to require teachers to set forth definitely on the Time Table, the hours devoted to the extra and ordinary instruction of their monitors.

In conclusion, I wish to add, that, all things taken into consideration, the teachers of the district are a most useful and deserving body of men and women, who perform their arduous tasks with general satisfaction. I know of no more useful class at the present day—of none that should receive greater consideration from the State, for (merely to illustrate their importance in one way), if the teachers do their work well, the State will, in course of time, be able to save many a heavy item of expenditure, which now lightens the public purse. I am, therefore, always anxious to see full justice done to the teachers, and above all, I am anxious to see the teachers themselves becoming imbued with a modest sense of the dignity and worth of their calling, and with a universal determination to perform the important duties of that calling honestly and well.

I remain, gentlemen, your obedient servant,

J. C. MACNAMARA.

The Secretaries, Education Office.

Mr. J. STERDE, A.B.

Mr. J.
Sterde.

Maghera, February 28, 1881.

GENTLEMEN,—I have the honour to submit to you for the consideration of the Commissioners this my general report on the schools in this district for the year 1880. The district comprises portions of the counties of Derry and Antrim and a small part of Tyrone, and is about fifty miles in length and thirty in breadth. It contains seven country towns,

Appendix B.
 Reports on
 the State of
 Schools.

Mrs. J.
 Stead.

of which Maghera, Kilrea, Garvagh, and Dungiven are the largest, but the population of none of these exceeds 1,300. In the Antrim portion of the district many of the people gain their living by weaving, but the great majority of the population depend on agriculture for their subsistence. There are in the district 141 schools in operation of the ordinary town and country type, and two evening schools. These schools are held in 123 houses, of which 86 are good, 32 middling, and 5 bad. Among the first class are to be found many substantially built, suitably furnished, well ventilated, and spacious schools, with ample play-grounds and excellent offices, models of what ordinary National schools should be. Of the five unsatisfactory houses, one, in consequence of an accident, will be rebuilt on an enlarged plan, another is to be superseded by a vested school, so that, in a short time, it is to be hoped that this class of school-houses will no longer be found in the district. Twenty-six schools are under the patronage of five of the London companies and are managed by their agents. Of these, thirteen belong to the Mercers Company, who keep them in satisfactory repair, and give to each master £20, and to each mistress £15 a year in addition to a free residence and garden, attached to twelve of their schools. Fuel is also provided by the Company for both schools and teachers. Five schools are endowed and managed by the Skinners Company, five by the Ironworkers, two by the Drapers Company, and one by the Fishmongers Company. Besides endowing the schools under their own management, the Mercers and Skinners Companies give annual contributions of from £2 to £12 to other schools on their estates, and in this way assist nine schools. The following improvements have been made in school-houses during the previous three years:—One house has been replaced by an excellent new one fitted up and furnished in a satisfactory manner; two others have been almost rebuilt; of these two, one has been beautifully fitted up, and a teacher's residence built adjoining it at the manager's expense; a fourth school has been enlarged and extensively repaired; new and suitable furniture, maps, &c., have been provided for others. In all, ten schools have thus been improved. A well built and handsome female school has been erected in Maghera for the girls who had been attending a mixed school that had been found too small for both boys and girls. There are residences attached to thirty-four schools, some of them of a very superior character. Only one of these has been erected under the National Teachers' Residence Act.

The management of the schools is vested in 78 gentlemen, of whom 52 are clergymen of various denominations, and 26 laymen. Whilst all the managers manifest a kindly interest in their schools, glad to carry out, if possible, any suggestions for their improvement, many of them take a very active and intelligent part in their management. By frequently visiting them, the attention of both teachers and pupils is sustained, a better attendance on the part of the latter is secured, and a healthy stimulus to continued work is excited, which produces good results at the annual examinations. There is no difference in this respect between clerical and lay management, as some of the best managed schools are to be found under lay as well as clerical management. One difference, however, may be observed, namely, that whilst nearly all clerical managers live at such distances from their schools as to be able to visit them frequently without much difficulty, some lay managers, on the other hand, reside so far from their schools that a visit has not been made to them, not merely once in three months, if it were only to check the accounts, but not even once in a year or more. In such cases as these, and there are two or three in this district, it would be well

for such managers to delegate a portion of their powers to a local clergyman who might thus be induced to visit the school and assist very much in its progress.

The teachers in the district form a very respectable body of men and women, the great majority of them attend closely to their school duties, and are anxious to promote the interests of their pupils. Of the entire number, three-fifths have been trained in the Board's establishment in Dublin, one-ninth are in first class, and a little less than one-half in third class. The differences, however, between them, apart from their classification or literary attainments, in regard to organizing powers, method of teaching, neatness, order, and cleanliness of their schools, are very marked. One of the best organized schools in the district is under a young trained teacher. It would be a pleasure for a visitor to remain in this school for an hour or more. The changes of lessons are made punctually, orderly, quickly, and quietly; the school and furniture are kept scrupulously clean, and the methods of teaching the different branches are excellent. Every child, whilst in this school, is usefully employed during the day. Many other schools are almost equally worthy of praise for the excellence of their arrangements and the order and precision with which the business is conducted. It is, however, much to be regretted that some schools appear to be conducted with no regard to order by teachers from whose experience and training better things might have been expected. This is chiefly the case with teachers who have been a long time in the service, trained over twenty or thirty years ago, who, possessing almost as much mental vigour and physical capacity as in their earlier days, have yet allowed themselves to drift into such vicious habits of school-keeping as they, in their younger days, would have been thoroughly ashamed of. The Pension Act will be useful in providing for such teachers as these, when their places can be filled by well qualified young men. It sometimes happens that local circumstances will interfere with the proper working of a school. In some localities, during some months of the year, the schools are overcrowded with pupils who wish to pay attention merely to Reading, Writing, and Arithmetic, and the same schools, at other times, are attended by a very small number of pupils. At these periods the arrangements for conducting the school in its normal condition are, of course, almost entirely upset. But there are other cases, where the attendance is nearly uniform during the year, the furniture and space accommodation good, and yet the organization of the school will be found deplorably bad. It would be well if such teachers were compelled, during their vacation, to attend some model school, with their manager's consent, and under the direction of the head master of it to take such notes as would assist them to improve their schools. Some teachers take pleasure in keeping their schools clean, tidy, and orderly; the maps and tablets are disposed on the walls in an artistic manner very pleasing to a visitor, the furniture is always placed most conveniently and kept free from dust, and the caps, &c., of the pupils laid by in their places. The contrast in these respects between different schools is very striking. There is no doubt that the appearance of a school has a life-long effect on the pupils attending it. Habits of order, cleanliness, neatness, and punctuality will be insensibly acquired by the pupils in the one class of schools, which no amount of mere oral teaching will be able to induce in pupils attending the opposite class of schools. Among the younger teachers of the district there is a desire to attend the annual examinations with a view to raise their classification. Their efforts are not always successful, due, no doubt, to insufficiency of preparation on

Appendix B.

Mr. J.
Streds.

their part. Many, instead of studying in accordance with the programme, think it sufficient if they are able to answer the questions given at the preceding one or two years' examinations, and who consequently fail if the questions at their examination be different from those. A notable example of a failure of this kind occurred not long since. A teacher under examination got a paper of questions on what he considered his best subject. These being different from what he expected, he found himself unable to answer, and retired from the examination. He then at once laid down a course of study for himself, taking the programme as his guide, attended the next year and succeeded, on creditable answering, in raising his classification.

In addition to the classed teachers, there is a good staff of paid monitors employed with a view to their being trained as teachers, which is the aim of the great majority of them. They are specially instructed by the teachers, and assist in teaching the junior classes, and are found to be well conducted and very obedient. The teachers faithfully give them the prescribed time for their extra instruction, namely, three-quarters of an hour before or after school hours; but in some cases this time is not judiciously employed. Instead of employing the whole of it in oral instruction, hearing and explanation of home lessons, &c., the monitor is sometimes engaged on written exercises, which could be done as well during the day when not engaged in teaching. To this, is no doubt to be attributed the failures of some of the monitors at their final examinations.

The days of the results examinations are now looked forward to with eagerness by teachers and pupils, and in many cases by managers, who testify by their presence, sometimes during the entire examination, the interest they feel not only in the general condition of the school, but even in individual pupils as they are examined in his presence. The pupils on these occasions come to school clean and neat in appearance, and are generally eager to be examined, a failure to pass, if known, being often attended with tears. The junior pupils, consisting of the infants, first, second, and third classes, generally acquit themselves in a satisfactory manner, and the senior classes in reading, spelling, and writing. It is in grammar that failures most frequently occur, and in the third and fourth classes especially. These failures are due, first, no doubt, in many cases to the thinking powers of the pupil not being sufficiently developed for him or her to be taught this subject with profit; but secondly, and far more, by want of skill on the part of the teachers in teaching it; and this want of skill, it is to be feared, is caused by the unsatisfactory manner in which this branch is treated in the text books in use. To call the word *that*, in the sentence "I bought that book," a demonstrative pronoun is to use the term pronoun contrary to its definition, for it would be impossible to substitute a *noun* for this word in the sentence referred to. The word in this case should manifestly be called a demonstrative adjective. Of course, an intelligent teacher will at once see that this is so, but the majority of the teachers are generally content to go according to the text book on grammar, no matter what absurdities it may lead them into. A good practical text book on grammar is still wanted.

Geography is taught with much better success, the excellent maps now to be found in almost every National school conducing to this result. Here, want of proper method of teaching prevents, in many cases, this subject from being so successfully taught as it should be. It might be made very interesting, and failures to pass in it ought to be rare. It is right to add, that failures in grammar and geography have

been attributed to the unwillingness of parents to have their children taught these subjects. This is, no doubt, true in some cases, but this feeling can be overcome by a skilful and able teacher, for wherever these branches are properly taught, good results are obtained, and no complaints of this kind are heard. The aversion on the part of both pupils and parents to the learning of agriculture is far more universal, and much more difficult to be dealt with. A very intelligent teacher in a country district not long since, told me that a few years ago he gave away, gratis, to his pupils some agricultural class books, and that many of them were, after a few days, returned to him with the statement from the parents that they did not want their children to be taught agriculture. This state of things is much to be regretted, as a knowledge of this subject would be most useful to the pupils attending country schools. Of all the branches of a child's education, reading, of course, holds the first place, as it is the key to all the others, and in the means used to acquire or improve this art, an immense amount of useful information ought to be acquired by the pupils. That this should be so, it is indispensable that the pupils should have an intelligent knowledge of what they read. To this end the teacher should himself read for them, explain difficult words, paraphrase passages, and show the drift and meaning of the whole lesson, even before the pupils have read it. That this is not done is one great cause of the want of intelligence on the part of the pupils which is too commonly met with. Even the pieces of poetry which the teacher can select for each class for repetition, are often quite misunderstood by the pupils, besides being repeated incorrectly, and in a hurried and indistinct manner. It would greatly facilitate the work of both teachers and pupils, in enabling the latter to acquire the power of reading with intelligence, if an alternative set of reading books were placed on the Board's list. The reading books at present in use have been revised, re-arranged, and improved; but additional matter, such as is to be found in the books published by Nelson, Chambers, or other publishers, would be found both useful and interesting. Taking into account the great importance of this branch of the school programme, it might well be considered whether a result fee might not be given to pupils of the second and higher classes, for No. 1 passes in reading, double that which is now allowed, the present fee being retained for No. 2 passes. Satisfactory, or No. 1 passes would, of course, only be given for accurate, fluent, and intelligent reading.

Arithmetic and needlework are well and successfully taught; seventy per cent. of those examined in the former branch in the year 1880-81 having passed.

The extra branches taught in the schools are singing, drawing, geometry and mensuration, algebra, physical geography, girls' reading book, the sewing machine, bookkeeping, trigonometry, mechanics, Latin, Greek, and Irish. The success in these subjects is varied; in some schools nearly all presented for examination passing, in others the reverse. There is no doubt, that in those schools in which these branches are successfully taught, an opportunity is afforded to advanced pupils of acquiring knowledge that may be of incalculable use to them in after life. One of these branches, namely, singing, deserves more than a passing notice. It is taught successfully in only three schools, in two of these the tonic sol-fa method is employed, in the other, the teacher plays the harmonium well, and the children sing by ear. Hullah's method, strictly so called, is in use in one school, and the result is very unsatisfactory. In others, the teachers sing from the ordinary staff notation, for and with the pupils, with fair results where the teacher's

Appendix B
Reports on

Schools.

*Mrs. J.
Steele.*

Appendix B. ear is correct. In the schools where the tonic sol-fa method is used, the pupils sing in two or three parts without much effort, and many of them have acquired the power of reading simple music at sight, which they could never have done by means of the Hullah or fixed DO system. It is a great pity that teachers do not make themselves acquainted with this system of teaching vocal music (which they might easily do during their vacations), as it is simple and easy, besides being scientifically correct. They would thus be enabled to teach with success and with little trouble, this most useful branch of the school curriculum.

*Reports on

Schools.*

*Mr. J.
Steele.*

The school accounts, with few exceptions, are honestly and faithfully kept. It sometimes happens on the day of results examination, that the teacher remarks that one or two pupils have made ninety-nine attendances, and adds, that these pupils would have done better than many who were to be examined; yet in these cases no attempt had been made to falsify the attendances.

With the exception of eight schools, two of which are about to be taken into connexion by the Board, the National schools afford the only means to the children of this district of acquiring an elementary education. That they are successful in doing the work for which they were intended, is shown by the results of the annual examinations; for the answering in about one-fourth of them ranges from eighty to ninety-five per cent.; of one-half from sixty to eighty per cent.; and of the remaining one-fourth, five only are very bad, the others being fair or middling. Over 6,000 pupils were examined for results during the year 1880-81.

I am, gentlemen, your obedient servant,

J. STEELE, District Inspector.

The Secretaries, &c., &c.

Mr. M. MULLALLY, A.M.

Cookstown, March 1st., 1881.

GENTLEMEN,—Agreeably to your instructions of the 15th December last, I have the honour to submit the following general report on the schools under my inspection.

The district list now includes 134 day and ten evening schools, of which latter only two are operative. Seven of the remaining eight have been closed for some years and show no tendency to re-open.

I am glad to have to record no increase in the number of evening schools since my previous report, save in one case, which followed the usual course. I have before expressed the opinion that these schools are worthless, and time has but served to strengthen me in my belief. Allured by the novelty of the proceedings, and perhaps encouraged by the inducements of the "teacher", the pupils on their first establishment attend very fairly for some time. The charm of novelty, however, wears away, enthusiasm is replaced by apathy; and the signs of premature decay are soon visible. Judged then by what they have done, or likely to do, evening schools in connexion with the Board are a failure. As I have indicated, the real incentive to success—earnestness—is wanted. In my view, evening schools should get no aid from the State, but be left solely to the domain of private speculation. Apart from the many arguments in favour of

*Mr. M.
Mullally.*

this course—the difficulty of their inspection and of detecting falsification, the facility of personation of pupils, and of presenting pupils who have been paid on before, or have not acquired their knowledge at the school—it has one great unanswerable argument; it would separate the drones from the workers, only those animated by a real desire for improvement would then attend, and I feel convinced, that a few such evening schools would effect far more good than a score of those established under the present system.

During the past two years, the ordinary day schools have been increased by six, of which only one was an entirely new creation, making a total of 132, all of which, together with two workhouse schools, are now in operation. I cannot flatter myself with the idea that the proficiency of these is improving. Some have, undoubtedly, made some little progress; some I consider to have retrograded; and, on the whole, I fear that but little, if any, advance has been made during the five years of my inspection here. Whether due to actual retrogression of the schools, or to my having insensibly adopted a higher standard, a comparison between their state as noted by me for 1876-7, and for the year now concluded, does not speak very favourably for the progress made in the interim.

The reading of the pupils is seldom good, the schools in which bold, accurate reading is to be met with being decidedly few. Occasionally it is merely the result of memory and association on the part of the pupil, as is proved by its not being uncommon to find pupils, even in the higher classes, who can apparently read the more advanced lessons of a book with fluency, while utterly ignorant of the earlier ones. The results of defective training are frequently visible in this branch, characterized, as it too often is, by an utter want of grouping, by a manner hurried and indistinct, by a want of attention to pauses, by vulgarisms, and sometimes by substitutions so absurd, that one is tempted to believe that the pupil is not looking at the words which he professes to read.

To the subject matter of the reading books, scarcely any attention is paid. There is no attempt, by a course of judicious questioning, by a different collocation of the facts contained in the lessons, by their thorough analysis, and a combination and presentation of the facts in every possible way, to cultivate in the pupils the invaluable habit of properly reflecting on, fully grasping, and thoroughly digesting what they read. Hence it is only plain, bald questions of single incidents or facts, that will in any case be answered. Questions whose phraseology differs from the text-book, or in which the subject is presented in a different light, questions comprehensive or philosophic, are generally heard in "mute surprise." The pupils have but a vague idea of what they have read. They have not the substance properly garnered in the storehouse of their memory available for use in any form required. Frequently there is such a hesitancy in answering, such a reluctance to speak out boldly, as if the pupil were entering on unknown ground and mistrusted his own powers, as leads me to the belief that the subject is altogether neglected; sometimes the answers are so utterly unmeaning, that one would imagine the pupils to be deficient in common sense as well as in training.

The repetition of poetry receives, as a general rule, no preparation; this pleasing exercise which would form so agreeable a relaxation from the strain of severer studies being practically untaught. Pieces are, indeed, committed to memory in a loose, inaccurate manner, but in their proper repetition, there is no instruction. So far as I could observe, the usual plan seems to be for the pupil to repeat, at the time for hearing "home

Mr. M.
Mellish

lessons," a number of lines got off as a "task," a performance which is hurried through with the utmost possible expedition on the part of both teacher and pupil. Nearly all other subjects receive a brushing-up for the results examination. Poetry is generally deemed of no little importance as to be let shift for itself. Pupils are allowed to select their own pieces; evidences of want of proper preparation crowd thick and frequent; and the result is that gross inaccuracy and defective style are the distinctive features of the exhibition.

The results achieved in spelling are not on the whole unsatisfactory. The oral spelling of the junior classes is very fairly performed, and among the seniors the large percentage of mistakes necessary to disqualify a pupil, permits the great majority to obtain a pass in this branch. In fourth class and above, I, however, find that the separate words of moderate difficulty are not well spelled. To effect improvement in this particular, I think it desirable that the spelling of such words should be taken into account in the award of marks. This would secure a better graduation in the conditions of a pass than is secured by the present method, under which it is not uncommon, from the nature of the lessons, to have the dictation test of fourth class pupils as difficult as that of fifth, and would also prevent passes in this subject from being obtained on the very small amount of knowledge that now suffices to procure them. For instance, an examiner gives a dictation exercise of fifty-three words, with the addition of six separate words. It is now quite possible for a pupil to have the whole six words wrongly spelled as well as five in the dictation proper—i.e., eleven out of a total of fifty-nine—and yet secure a pass. My idea is that two errors in the separate words should count as equivalent to single error in the ordinary dictation and thus affect the result. For example, in the instance given, it would take four mistakes in the separate words ($= 2$) and four in the ordinary dictation, (i.e., $2 + 4 = 6$), a method of marking I apprehend by no means too severe to secure the rejection of a pupil.

I consider that the writing of the first class has been brought into a fairly satisfactory state, a matter not unattended with difficulty, as a very large number of the teachers seemed to have no methodical plan of teaching the subject to this class. In the higher classes, though I have made strenuous exertions, by a diligent examination of the copy-books, by pointing out the defects in imitation of the head lines, by marking off unnoted errors, and by showing how through series of copies and copy-books, a wrong formation of particular letters is allowed to continue, to bring prominently under the notice of the teachers the benefits of supervision and correction, I have not yet been able to get the care and attention with which this subject should be taught devoted to it. Teachers, indeed, do not profess to disregard my suggestions on the point, but under the impression that by having models placed before them, the pupils will learn to scribble in some way, and that almost any scrawl ought to secure a pass, they seem to me, however erroneously, to have come to the conclusion that writing is the one thing which can be neglected. Under this one head of want of supervision of and attention to the exercise, are to be grouped many of the evils which occur in connexion with it. Not once alone have I found teachers ignorant of the lines to which particular letters should be written, and even of the very spaces in which the pupils should write; a want of knowledge that betrays gross inattention to the subject. Copy books of all shapes and sizes, some with head-lines and some without, find their way into the hands of the pupils, to whom is often permitted the baneful privilege of exercising their own choice. Hence, it is not an uncommon occurrence to discover among the copy books

written by a pupil during the year, numbers from three or four different series. This variation of the model, must evidently be a serious bar to progress, an almost insurmountable obstacle to the acquirement of a decided style; and it is, in my opinion, to be regretted, that so many different series have found admission to the Commissioners' list. Another point deserving of notice in connexion with this exercise, is, that even where only one series of copy books is used in a school, members of the same class do not always get the same number, which in itself, seems to me a defect and destructive of that uniformity, that should mark *class* teaching; for, as members of the same class read the same book, and work the same arithmetical rules, so should they, to my mind, write the same style, and even copy the same head-lines.

Arithmetic is not badly taught, taking into account the difficulty of the subject, and a very fair percentage of the pupils manage to reach the minimum. This may be accounted for, by there being no doubt greater attention paid to it by the teachers, on account of its intrinsic difficulty, and also by the fact, that the pupils devote much time to it during school-hours, as it always offers a ready means of affording constant employment. The great defect in this subject is, that the junior classes are not fully prepared in the addition tables—a defect which follows them with but too fatal an effect into the higher classes. I have before stated, what I believe to be the only remedy for this important defect, viz.: to require the junior pupils to add at once on the blackboard or slate, by means of the addition tables. Examination on the tables, is but of little avail. The pupils frequently answer on them with moderate readiness, and yet in practical addition neglect them; reverting at once to the fingers. In several cases, more attention might be paid with advantage to the neatness of the figures, and of their arrangement; and in the senior classes practice on paper is not sufficiently extensive.

I cannot agree with ideas which I have seen put forward, that the theory of this subject does not receive sufficient attention. If by the "theory" be meant the *rationale* of the processes employed in the different rules, the idea is far-fetched, as many of the processes involve for their thorough comprehension a knowledge of algebraical operations; if the word be intended to include merely a knowledge of the technical terms and of the rules themselves, the objection does not hold good, as several examples could not be worked, were not the Terms and Rules understood, though the pupils might be often at a loss to define the one or formulate the other. Besides, in the papers set by that great examining body, the Civil Service Commissioners, so far as my memory serves, questions of either class seldom, if ever, find a place. To accustom the pupils, however, to precision of language, as an aid to precision of ideas, I think it well that questions of the latter kind should occur on the examination cards, while at the same time, I consider that those flimsy queries in the answers to which the pupils could be enured in a day, and which in their own nature, are neither embodiments nor exemplifications of principles, are to be deprecated.

Mental arithmetic is very much neglected. The pupils are usually ignorant of the short rules intended to facilitate calculations under this head, which are given in most text-books, while it is extremely rare to meet with a pupil in any class, who can apply any of the simple rules mentally to numbers of two or three figures, or can answer readily and correctly simple practical questions on marketing or commercial transactions.

The knowledge of Grammar I consider to be increasing. In third

Metheny.

class the noun and verb are fairly distinguished; the adjective proves a considerable stumbling block, at which several come to grief; and of the remaining parts of speech only the more usual are known, and these merely from memory. In the preparation of this class, the great fault of teachers as regards grammatical instruction occurs. The words of a sentence are gone through in a mechanical kind of way, without any exercise of judgment on the part of the pupil, who merely refers each word to its class, under correction from the teacher or another pupil if he be in error. Such a course is evidently beginning at the wrong end. There is no scientific classification. The pupil learns the parts of speech *inductively*, and is not taught them *deductively*—consequently, his knowledge of the greater number of words which he can classify is a matter of memory, and when he otherwise classes a word correctly, he does so from a hazy, indefinite idea, that it resembles others which he knows to be so classed. Not that he does not know the definitions. The teaching of these goes on side by side with the process mentioned above, but their practical application is neglected, from which arises the strange result, that a pupil may often be met with, who can tell that the word *horse* is a noun, and that "a noun is the name of something," and yet is unable to state his reason for classing the word *horse* as a noun.

This wearisome process of acquiring knowledge must be exceedingly irksome to youthful minds. We may wonder that such a system could be pursued—but our wonder will be diminished, if we recollect, that it was formerly considered the only way in which to learn the dead and other languages. There are points of difference, I grant, as in learning the languages, a knowledge of the construction and style was also aimed at, but the systems are essentially the same.

In fourth class, the classification of the parts of speech is generally fairly performed; and an attempt, more or less successful, is made to have the pupils acquainted with the portion of the text-book relating to inflections. Their answering on the latter however, is nearly always characterized by inexactness and indecision; by superficial knowledge; and by a preparation in particular questions, which are so suggestive of cramming and of a want of solidity in the instruction.

In parsing, the fifth class is making some slight progress; so much cannot, I fear, be affirmed of its etymology. The letters of sixth class are generally very poorly done. Mengro in ideas, and deficient in style; interlarded with vulgarisms, such as "I take my pen in hand," and "no more at present;" without punctuation; and not seldom undivided into sentences; and free from any taint of capital letters; as a subject of examination on which to award the pass mark, I consider the letter inappropriate. In town schools, attended by the more respectable class of children, several would probably be written fairly, with very little instruction from the teacher. In country schools, it must be only by great efforts on his part, that the deteriorating influence of bad models can be overcome.

In *Geography* the amount of information possessed by the pupils, though often respectable, is not always so full or so accurate as I should wish. Relatively, as well as absolutely, the third class possesses the least knowledge of this subject; a deficiency which I attribute to the more indefinite nature of the programme for the class; the want of a division in the text books, embracing all required for it and no more; and the neglect of the teachers in not preparing for themselves, and adhering to, an outline of a systematic course. An attempt has indeed been made in one of the books, sanctioned by the Board, to meet this want, but I am compelled to say that the attempt has not been a happy one.

Where I have had an opportunity of observing a lesson in this subject being carried on before a map, it has often struck me that a wrong method is pursued. No systematic order is followed in the pointing out of places, which are taken at random; the teacher fills the position of an examiner, rather than of one conveying instruction—forgetful that however useful such an exercise may be as a *test* of a child's knowledge, it is not *teaching*, and incurring the danger, to which all examiners are more or less prone, of going over the same track, and leaving many other things of importance unnoticed and unknown. The same remark applies to *test cards*, which, though useful in their proper sphere and with limited application, can never be made an efficient substitute for regular instruction.

Another evil in connexion with this subject to which I wish to advert, is the frequent changes in, and changes of, text books. Two of the books on geography on the Board's list, and those the very books most affected by the pupils, have undergone three changes in about as many years, while a third has been lately added. In any subject, changes would be detrimental, but in geography they are an unmixed evil. The knowledge of geography depends wholly on the memory; memory is aided by a proper classification, and by association of ideas, and whatever has the effect of disturbing the classification and interfering with the association, must act as a drawback upon our powers of recollection. Limitation to one book is, therefore, essential. The use of more, as is now sometimes found, even in the same class, must produce a want of uniformity, confusion of ideas, and even waste of time.

In a former report, I hazarded the opinion, that it would be desirable to have the examinations of the senior classes in grammar and geography, written and conducted by means of cards. That opinion I beg to repeat, with the addition, that what are known as the sub-heads should be made integral portions of the examination. These sub-heads now run the risk of being neglected, if not altogether overlooked, though many of them seem to me to be in no way of minor importance; but should they be deemed of only secondary interest, the difficulty could be met by having less weight attached to them in the value awarded to answers, or in the number of questions given. This course would, I imagine, save loss of time, ensure attention to the sub-heads, cultivate accuracy, and create a uniform standard.

Agriculture, as all the world knows by this time, is not well taught, and I now rarely find the subject attempted in fourth class. This, I have no doubt, is partly due to its rather "dry" nature; and even in fifth class the "Rotation of Crops," is not read with the same eagerness nor answered on so well as "Live Stock." Aids to the teacher in his instruction in this subject are desirable, and I believe it would be found serviceable, if the author of the class book supplemented each chapter by appropriate questions, as well as to have the edition of the "Practical Farming," with the questions annexed, substituted for that now on the Board's list.

In those schools in which book-keeping is taught, it is scarcely ever taught with success. Too much attention is given to mere theory, while the practical portion of the work is neglected; with the result, that the pupils while knowing book-keeping, could not keep books. So strong is the tendency to confine the pupils to the mere routine of question and answer—the importance of which for the knowledge of the principles is evident, but which could never be made a substitute for the art of book-keeping—that I have a recollection of the surprise one day evinced by a teacher at my rejection of a pupil who was brimful

Atkisson.

of the answers to all the questions appended to the prescribed "sets," and I find it a most common thing to meet pupils who can rattle off glibly, journalistic and ledger entries, but could not draw out and close the simplest form of cash account. In new editions of the Programme, it would be well to reintroduce the clause from which teachers are to understand that suitable exercises are to be presented for each pupil claimed on.

The Extra Branches taught in this district are comparatively few—singing, drawing, physical geography, and, to a few boys here and there, geometry and algebra, with now and then Girls' Reading Book and sewing machine—and as time rolls on they are likely to be fewer. Nor is this to be regretted. Several of the extra subjects on the Programme are entirely outside the scope of ordinary elementary schools, and any arguments for their retention thereon, have been much diminished by the establishment of the Intermediate System. The languages, as the common portal to all the professions, and having regard to the extinction of the old classical schoolmaster, might be retained. Geometry and algebra, for their own importance and the providing a future race of teachers, are necessary. But the others should go. The amount of physical geography taught is not worth the expenditure, and should be known by all sixth class pupils, as part of their ordinary course. Paying for instruction in the sewing machine seems an utter waste of public money. To several of the girls, who will never possess a machine, the ability to work it is useless, and those who can procure one will have no difficulty in acquiring a knowledge of it. Not to speak of the meagreness of the course prescribed from them, book-keeping as an extra for girls stands in no better position. To none of the girls whom I have seen learning it could it possibly be of any benefit. I am not unaware of the movement for the extension of female employment; but I do not remember to have seen it yet suggested that women should be engaged to keep the accounts of large mercantile establishments.

In the preceding account of the proficiency of the schools, my aim has been rather to point out defects, than to indicate excellences; and while I cannot conceal from myself that several of the schools and schoolmasters are immeasurably inferior to what they should be, I with pleasure recognise that scarcely any of the latter exhibit anything like gross neglect of duty, that more of them are fairly successful workers, and that not a few are marked by earnestness and enthusiasm.

With the old men little can be done; but as the cause will always produce the same effects, it is an important question to consider what steps should be taken for its removal. In town schools the matter is but of secondary importance. Apart from the fact that these schools usually fall into the charge of superior teachers; there is generally more intellectual activity, a greater degree of refinement and polish, which remove or render less operative causes that act so powerfully in rural districts, where the teachers become almost undistinguishable in manners and language—and in some cases one would be tempted to think in attainments—from the peasantry around them. I am not among those who believe in the all-powerful influence of a course of training. Its paramount usefulness in imparting a knowledge of method, and in giving a basis for a future superstructure, I do not mean to deny. But when the slight polish acquired by his trip has worn away, when he has again become vitiated by old times and old manners, when he has abandoned his reading habits, and confines himself to the dull routine of his daily work; a being almost without energy and without

hope, I look in vain for marks to distinguish the trained teacher from his less fortunate brother. He suffers from the same cause—intellectual stagnation—a cause which will, I feel convinced, be, while unremoved, a powerful factor in preventing our schools from being what they should be, living centres of light and industry.

The class of candidates seeking admission to the profession does not promise well for the future race of teachers. I never met one who exhibited a thorough acquaintance with the entire Programme; while in some cases the answering was so bad, as to cause me to believe that the aspirant had formed a very poor estimate of the qualifications required in a teacher. In an exceptional instance or two, there was a deficiency of general culture and manners, which could not be calculated to exert a very refining influence on the pupils; and I would take the liberty of remarking that in the conditions of admission to the service this point seems to have escaped inclusion.

Save a few, the school-houses of the district are fairly comfortable buildings, and cleanly kept. They, however, as well as maps, furniture, &c., are not made to last for ever, and with a couple of honourable exceptions, I seldom find managers display much alacrity in remedying deficiencies of this nature. In fact, in some cases, the neglect is so gross that I think it would be well if some definite period were prescribed, beyond which a defect of the kind, would not be allowed to exist.

The order of the pupils, while under examination, is generally exceedingly good. There are, to be sure, some attempts at affording and obtaining assistance, but their general demeanour, their quietness and submissiveness could not be too highly praised, and the evident delight and anxiety with which they in several cases enter upon their work, contribute to make a results examination often the pleasantest portion of an inspector's existence. Materials so quiet and plastic could be moulded into any form the teacher chooses, and when the result produced is disappointing, we may take it as certain that the fault lies in the producer.

Of the conduct of the teachers themselves during my visits, I can also speak in terms of the highest commendation. On a few occasions, indeed, at results examinations, their anxiety has betrayed some of them into unwarrantably interfering, but I have always found a private remark of mine amply sufficient to prevent a repetition of this impropriety.

Before closing this report I wish to allude to what I consider to be the cardinal defect of bad schools—want of discipline. This defect, so great an obstacle to smoothness of working and progress, is most noticeable at secondary examinations, and incidental visits, on which occasions an inspector could sometimes fill volumes with irregularities under this head, which now and then only peep out at results inspections. For all faults of this nature—in attention to time table, in enrolment of pupils, in division of school, in draft arrangements, in the seating of pupils, in the supply of and method of keeping stationery,—indicative as they are of unsystematic working, a smart fine should be inflicted. These are the very points which should distinguish the National schools founded on a system from their predecessors, the hedge schools; they are also, I regret to have to say, the very points paid least attention to; and I am strongly of opinion that for a violation of any one of them, no toleration should be shown to an offending teacher.

I have yet foreborne to express my opinion on the merits of the results system, and I do so now with great diffidence, seeing that, as inspector, I have had no acquaintance with any other. While it has, undoubtedly, somewhat stimulated the lazy and apathetic, it is ques-

Mullally.

tionable whether, on the whole, its effect is beneficial. There is too much hurry, too constant a high pressure, considering the time spent at school by many of the pupils; in the effort to move them from class to class, the knowledge is but crude and ill-digested, hastily acquired, and more hastily forgotten. Nor are there to be reckoned as amongst the least of its evils, the large mass of clerical work which it has cast upon teachers and the never-ending labour which it has caused to inspectors. These things in themselves would be of minor importance compared with great or marked advantages. But while retaining the principle of the results system, I think it possible to get rid of its imperfections. The payment of a "lump" sum calculated on the average attendance and the general proficiency might not be a matter of difficult arrangement. Such a system, if workable, would secure to large schools the benefit of their attendance, would supply all with the needed stimulus, and would do away with a numerous progeny of evils of which that of payment by results has been the prolific parent.

I have the honour to remain, Gentlemen,

Your obedient servant,

MICHAEL MULLALLY.

The Secretaries, Education Office.

Mr. J. J.
Hynes.

MR. J. J. HYNES, A.M.

Enniskillen, February, 1881.

GENTLEMEN,—I beg to submit in compliance with your instructions, my second general report on this district.

Since the date of my last report (March, 1879), the district has undergone some change, consequent on the re-arrangement of districts that was made in 1879. Ten of my operative schools were then transferred to the Omagh district, and I received six schools from Monaghan, and four from Sligo district. The new schools are more distant from my centre than those which I have lost, and on that account I would, as far as the district is concerned, prefer to have matters as they were. Two schools, that were not needed, have been struck off since the same date, and five new schools have been taken into connexion, making the number at present in operation 136, viz:—

Model,	:	:	:	3
Evening,	:	:	:	1
Ordinary,	:	:	:	132

There are also ten building cases, two of which are in localities hitherto unprovided with schools, and the remaining eight to replace unsuitable houses. Seven of the ten are either completed or approaching completion, and will be opened in a few months. All are designed according to the Board's plans, so that the accommodation afforded by them will be unexceptionable. One in particular, that erected in Fivemiletown, is really a splendid building. In addition to these houses, erected with the assistance of the Commissioners' grant, five others have been built from funds derived from local sources, and are well adapted for school purposes. There are only five houses, which I would describe as bad, for which steps have not yet been taken to provide suitable substitutes. In a very short time there will not, I am hopeful, be a decidedly objectionable

houses in the district. The improvement in the accommodation is going on steadily, and must be regarded as a promising sign; for I invariably find that managers, who are content with very indifferent results when their schools are held in poor quarters, expect much better work, when they go to the expense of providing proper houses. It seems to offend against their sense of the unities, to have a good teacher in a wretched cabin, or a bad teacher in a fine school-room. This feeling is of service in helping me to weed out the inefficient, an end to which the Pensions Act has also contributed, although not as largely as I should wish. Five of my teachers, who were incapacitated by old age for further employment, have been placed in receipt of pensions, and three more have made application, and will, I hope, be pensioned in a short time. Salary has also been withdrawn by the Board from two within the past year, on the ground of inefficiency; and three have been dismissed by their managers for the same reason. It is as yet too soon to pronounce as to the merits of their successors, but I think in each case a change for the better has been made. There are still a good many of my teachers, who were never very efficient, and who are past the age for teaching, whose removal is to be desired, and will be soon effected. We have to thank the Pensions Act for enabling us to lop off our decayed branches. Before its passing, old teachers clung with tenacity to their posts, seeing no hope for themselves, but to die in harness; and it would have been cruel to cast helpless upon the world, men that had grown gray in the service—we have been rescued from this state of stagnation, but only to be met by a new difficulty. Few managers and few inspectors have not, I am sure, experienced the difficulty of which I speak—that of procuring suitable candidates to fill vacancies. There is always plenty of raw material to be had, but trained applicants are very few. It is far from unusual to have probationers, without previous experience of teaching, appointed, and the harm done by these persons is very serious. Some of them, who have intelligence and tact, perhaps become, after a good while, efficient teachers, but others sink into mere drones. Strange that for any mechanical occupation, however humble, training and apprenticeship are indispensable; but for teaching, which, to be successful, requires experience and high qualifications; a mere test examination in literary acquirements is prescribed. I believe that this want of training is at the root of almost all our deficiencies. In our schools undoubtedly we are doing the most with the materials at our disposal, but the number of unskilful teachers, whom a proper course of training would have improved or, failing this, would have eliminated, is much too large and is likely to increase, if our ranks continue to be recruited in the same manner. The evil makes itself more felt every day, for every day a nearer approach to the requirements of the Programme is expected, and teachers, who some years ago would have jogged along pretty well, are now behind the times—a greater amount of technical skill is every day required. As far as the schools under Roman Catholic clerical management are concerned, our Training Establishment may, unfortunately, be non-existent; no candidates hailing therefrom, will be selected to fill vacancies, and entrance to it is vigorously discontenanced. It is not my province to speak as to the grounds of objection, or to offer suggestions for their removal, but the fact I greatly deplore. Until a course of training prior to appointment is compulsory, our progress will not be satisfactory. The course should be longer than at present; it ought, I think, extend over two years, at least, and at the end of six months, such candidates as do not show a sufficient aptitude for teaching, should be removed. Pending a reform

Mr. J. J.
Hynes.

of this nature, appointments of untrained teachers should be conditional; and should not be ratified until a favourable report in regard to the candidate's ability as a school-keeper and in regard to such qualifications as are not tested by mere examination has been received from his district inspector. Many who possess the prescribed amount of knowledge fail utterly as school-keepers, and in due course either resign or are dismissed—these, however, do not cause the most trouble. There is still another class of those who verge, so to speak, towards the neutral line, who are not successful enough to give satisfaction, or inefficient enough for dismissal. Once let a teacher of this character be appointed to a school, and none but an inspector can tell how difficult it is to remove him. In making a selection of untrained candidates the inspector, not having perhaps a lengthened acquaintance with them, will sometimes even be at fault. It is only from the observation which a training school affords, that capacity for teaching can be gauged. Our monitors ought to be a reserve from which to fill up vacancies, but here again the same difficulty confronts us. Many of our teachers are not competent to train monitors, nor do their schools afford good examples of method. Our present arrangements regarding monitors are indeed, in my opinion, very unsatisfactory. The remuneration is too small; the age of appointment too low; and the examination in the text-book of school-management too long deferred. The employment of the monitors in teaching during three hours each day is also excessive. A large number of our schools are in operation only for four hours (exclusive of play-time) each day, so that one hour's ordinary instruction, and three-quarters of an hour of special instruction are to supply for the monitor the place of the four hours teaching which the pupils receive. They are not equivalents, and I often find that the monitor, when he does not possess much more than the ordinary share of intelligence, after his first year either remains stationary or retrogrades. This is most apparent in the case of third class monitors. The limits of age for this class are from ten to thirteen years; children of this age are of no assistance to the teacher, and their little stock of knowledge is slowly augmented or becomes gradually exhausted. The minimum age for a monitor should, in my opinion, be fifteen years, and the course should extend over five or even six years. A special programme should be adopted and the Results' Programme of the class, in which the monitor happens to be enrolled, should not be the test, as it does not secure a uniform standard (in accordance with the standing of the monitor). In case of want of application or unsatisfactory progress in studies, salary should be stopped on receipt of the second unfavourable report. An increased remuneration would cause a more lively competition for vacancies. At present, there is in this district a great dearth of candidates and rarely is the examination competitive. It is remarkable how few covet the post of monitor, and it is no less strange how few of my teachers seem to have adopted the profession from choice. Some chance opening, the death of a relative who was in charge of a school, a vacancy in the locality, or such other occurrence appears to have been the means of enlisting many of them in our service. For other employments persons study for years with a settled purpose in view, but many of those, who pursue teaching as a calling have been led to adopt it through chance or from want of something better to turn their hands to. It is only too patent that the emoluments of a teacher are not, as a rule, sufficient to make the position appear generally desirable; sufficient to render it prudent, in the eyes of intelligent young persons to expend capital in time and money in seeking to attain it; are not even

attractive enough to retain men of capacity, when an opportunity presents itself of joining such branches of the Civil Service, as the Excise or Out-door Customs. A teacher, if industrious, should be able to live well by his school, and should be placed above the fear of want. Not a few of those in charge of my schools, who are not deficient in application, would be sore pinched if their incomes were not augmented by the profits of their little shops. In a few favoured spots, the emoluments are sufficient, or perhaps more than sufficient; but in others the pittance is so small, that how a person can live decently, not to say respectably, on it is a puzzle. With better salaries a better class of candidates would be obtained, and the efficiency of our schools would be promoted.

Not inferior in importance to the question of salaries is that of teachers' residences. Suitable residences are much needed in this district, and yet since 1879, when I furnished my last report, advantage has been taken of the Act in only one instance. A large number of my teachers have miles to walk between their schools and the cabins—wretched ones too often—which they call their homes. It must be remembered that a journey, which on a fine day would be inconsiderable, becomes a serious matter in wet weather, and that teachers, at times, reaching their schools quite drenched and remaining in their wet clothes all day, sow in this manner the seeds of disease. The difficulty of procuring a site is, in most cases, the great impediment, and the same difficulty has too often prevented or retarded improvement in our school-houses. What an advantage it would be if the granting of sites for school purposes were compulsory. I hope that there will soon be some legislation to this effect.

I find the teachers, with few exceptions, scrupulously exact in keeping their accounts. Within the last two years I have had only one case of gross falsification to report. It is in small languishing schools alone, that there is much temptation to falsify. In such the temptation to falsify with the view to keeping up a fictitious average and preventing loss of salary is often very great. There is little inducement to credit with attendances pupils who have not been present on 100 days, so that they may be eligible for examination, as teachers are aware that children who have attended so irregularly rarely succeed at a results inspection, and indeed, as a rule, fail in all subjects.

To fairly satisfy the requirements of the results programme, an ordinary pupil must, it appears to me, have received instruction on 200 days. The answering of those that have been present on less than 150 days generally brings discredit on their schools. It is desirable that the minimum numbers of attendances, to qualify for presentation, should be raised from 100 to 150. I have spoken to some of my teachers in the matter, and they agree with me in thinking that the change, although it may cause a temporary falling off in the number of those eligible for examination, would in the end be beneficial, and would soon produce a marked change in largely increased results generally. The falling off in the numbers for examination would, as I have said, be merely temporary, for after a year or two there would, I feel sure, be present at inspection as many pupils credited with 150 attendances, as there are now with 100. Parents, in nine cases out of ten, will make some effort to have their children qualified by attendance for examination, and are desirous to have them present thereat. Those who are careful will see that no day is lost without sufficient reason. Those who are careless cease to take further trouble when they think that the prescribed number of attendances has been made; but raise that number from 100 to

150, and they will continue their efforts, however slight they may be, and endeavour to comply with the new regulation. Some teachers too become less pressing in their exertions to secure regularity of attendance when they find that pupils have attended sufficiently often to qualify them for presentation. The worst of this is that at the very time—the eve of inspection,—when regularity of attendance is most important, it ceases. So very difficult do teachers find it to work their classes up to the required standard of proficiency in the ordinary subjects, that the teaching of extra branches, in this district at least, has greatly decreased. This is not much to be regretted. There were no regular classes formed. A few pupils received lessons at intervals snatched from the ordinary business of the school. Their acquaintance with the subjects was in many cases extremely imperfect, and they were put forward merely in the hope of being able to slip through and score a pass at the end of the day, when, it was thought, the inspector, weary with his labours, would be less exacting than usual. This kind of proceeding has, however, been abandoned, and wherever extra branches are now taught, an effort is made to teach them thoroughly. The programme for ordinary subjects needs, I think, to be narrowed in some points. Sixth class arithmetic is too comprehensive. As at present worded, pupils on their first examination in this class are expected to work questions in any rule in arithmetic. There should be distinct and defined courses for first presentation and for second. To know the map of Europe intimately would afford employment enough in geography for one year to the first stage of fifth class. A knowledge of all the Continent might be prescribed for second stage, and the British Empire might be reserved for sixth class. With regard to repetition of poems, a reduction in the number of pieces required—say three pieces for fourth and lower classes—would be of advantage. The poems are at present repeated, as a rule, in a way that indicates hasty teaching, and this is not surprising, the attendance is so irregular and the more important branches of the programme engross so much of the teacher's time. But in the poetry, as in other subjects, it would be well to insist rather on attention to quality than to quantity. In schools where the attendance is regular, if the teachers are fairly efficient, they may be expected to work their classes up to the prescribed standards of proficiency; but in the majority of country schools, the attendance is extremely irregular, and in them a near approach to the programme is unattainable. Teachers are of course sometimes to blame for the want of regularity, but, for the most part, any efforts which they would make to remedy this defect would either be futile or would meet with trifling success. All who are interested in the education of the country will, I think, hail with satisfaction any measure to render attendance compulsory.

With all our drawbacks, however, we have no reason to be discouraged, for we are advancing. Our progress may be slow, but it is sure. I have little doubt that if the views of all our inspectors were obtained, there would be an almost complete consensus that a substantial improvement has been made in every branch, even within the last five years. Of some of the so-called sub-heads, this cannot be said. Explanation, for instance, or answering on the subject-matter of the reading lessons continues to receive insufficient attention, and is likely to be neglected until a pecuniary value is set on proficiency therein. No. 1 and No. 2 passes in reading should carry different results fees, and the former should be given only when the answering on the text is satisfactory. If this were done, the requisite amount of care would be paid to this important portion of the school business, and, as a necessary consequence,

our reading would be more intelligent. Reading now, with rare exceptions, is intelligible. It is generally verbally correct in the junior classes and, not unfrequently, fluent in the seniors; but we seldom meet with finished or thoroughly intelligent reading. We cannot hope for much better results under existing circumstances. The proficiency in spelling may be pronounced satisfactory. Fourth class appears to be the most difficult to work up in this branch. Third class pupils can of course write from dictation only very simple sentences, and I am at times puzzled to select a passage suited to their capabilities. The test for sixth class is not sufficiently high. Exercises from the Spelling Book superseded ought to be included in their programme.

A very high degree of proficiency should be insisted on in writing. The improved copy books now in use have greatly facilitated the teaching thereof, and a very moderate amount of care on the part of the teacher produces satisfactory results. The progress is not quite equal to the facilities afforded. Though all the series of copy books on the Board's list are not of equal merit; any of them, if adopted and constantly used, will make excellent writers. Some teachers are unwise enough to employ, seemingly through mere capriciousness, sometimes the books of one series, sometimes those of another. This does much harm, as the hand of the pupil becomes unsettled in changing from one style to another. Books 9 and 9b of Thom's series deserve special mention. They are, so far as I am aware, unique. The former contains specimens of the Civil Service hand. Where it has been introduced the desired style has been readily acquired. 9b gives models of letters, business and other, and is extremely useful for sixth class pupils.

Mental arithmetic and theory of arithmetic continue to be low. A great deal of time is, of necessity, devoted to arithmetic, but almost all of it is engrossed in teaching the pupils to work sums on slate or paper, so as to secure a pass at the results inspection. In this practical work, the proficiency is, on the whole, respectable.

Grammar and geography are improving, but very slowly. The fee for these subjects should be raised from 1s. 6d. to 2s. in the case of the second stage of fifth class and sixth class, so that the payment may be more proportionate to the amount of time and attention which they require. I am of opinion that their exclusion from the programme of third class would be advantageous, not because the teaching of them would not be useful, if time permitted, but that the children of this class may be able to give undivided attention to the more important branches. Sensible teachers would of course still continue to give instruction in them, but only as a preparation for fourth class, the standard of which should be lowered.

The results in agriculture and bookkeeping are far from satisfactory, but the pupils make, in general, so few attendances and have so many subjects to prepare, that this is not to be wondered at. Until attendance is made compulsory, more successful teaching therein can hardly be looked for. I have, I must confess, very little confidence in the value of mere book instruction in agriculture.

I regret that I have been prevented, by pressure of other duties, from entering more into details in this report; but an inspector's time is so taxed by his ordinary work, that the leisure requisite for doing so was wanting. The great increase in the amount of work devolving on inspectors is indeed a matter for serious consideration. Their physical and mental labour, is considerable, and their duties are so engrossing, that no Government officers have less time at their disposal, for recreation or for mental culture.

Hynes.*

Appendix B. The new regulation regarding recently appointed unclassified teachers, according to which their examination is conducted in writing, makes a further demand on time, before fully occupied.

Reports on the State of Schools.
Mr. J. J. Hynds.

I am, Gentlemen,

Your obedient servant,

JOHN J. HYNES, Inspector of Schools.

The Secretaries, National Education Office.

MR. WM. HEALY.

Downpatrick, 28th February, 1881.

GENTLEMEN,—In accordance with your instructions, I have the honour to submit the following general report on the state of the schools under my charge for the year 1880-81.

At present there are 132 schools in the district, viz:—

121	Ordinary Day Schools, in operation.
3	Do. do. Insipiente.
1	Convent School.
1	Peer Law Union School.
6	Evening Schools.

Total 132

The recent partial reconstituting of the district, has proved very advantageous, both in diminishing the amount of travelling, and in bringing the schools more immediately under supervision.

During the year, 128 of the foregoing schools have been examined for Results—one of them by the head inspector, and 127 by myself. Two evening schools remain uninspected at the request of the parties interested.

In addition to the Results Examinations, I made 46 secondary inspections; and 179 incidental visits to 91 different schools.

The unexpected visits are of very great importance in many ways. I know them to be highly prized by managers, as also by the more deserving and efficient among the teachers—it is only by careless and inefficient teachers they are dreaded, and looked on as a sort of unnecessary official espionage.

It is much to be regretted, that the pressure of other duties does not allow of a secondary inspection of each school, about the middle, or the latter half of the Results period; they would be of great service to both teachers and children—weak points in the progress and proficiency would be discovered, and the energies of teachers could be more profitably directed, during the remaining portion of the year. It is only right to say that the teachers, whose schools I was thus able to fully examine, expressed their thanks for being put in a position of justly estimating how they were proceeding.

The number of pupils on the rolls on last day of month preceding examination, of the 123 day schools examined for Results, was 10,757; the average on rolls for year was 10,840; the number qualified for examination by 100 days' attendance was 7,163; the number actually examined was 6,747; and the average daily attendance was 6,240.

The foregoing returns afford intrinsic evidence of the general faithfulness with which the school accounts are kept by the teachers; they also record nearly the entire school attendance of the district, as hardly any other schools are in it, the few that are, being attended by only a comparatively small number of children.

Of the total number on rolls, 58·6 per cent. were in average daily attendance; 66·5 per cent. qualified by attendance for examination; and 62·7 per cent. were examined. This per-centage examined, viz.: 62·7, is very satisfactory, when contrasted with the same per-centage for all Ireland, which, for year 1879, was only 45·1 per cent. of the total number on rolls; while, it at the same time amply testifies, how much social prosperity adds, even without compulsion, to the school-life of children.

Reading.—Taken as a whole the reading is quite as good as can reasonably be expected; the passes in this important branch having been 89·2 per cent. of the total number of *classed* pupils examined. It is true it has many faults—being, among the juniors, too often hurried and rote-like—among the seniors, monotonous, listless and unappreciative. But, in estimating Results in primary schools, a too fastidious taste cannot be allowed to gain the supremacy; for, the difficulties that beset pupils before attaining even a correct, not to mention an intelligent mode of reading, are truly great. The great defect chiefly noticed and commented on by inspectors, is, absence of *intelligent* reading. But, while this defect is unfortunately too general, it may, at the same time, be fairly urged that, taking all the circumstances of primary schools into account, it cannot reasonably be expected to be otherwise. The children in their homes have few sources of awaking their intelligence, or of adding to their vocabulary; their attendance at school is irregular and fluctuating; they are, for the most part, very young and have almost everything to learn; the teachers are not, in all cases, capable of smoothing the difficulties that stand in the way; hence, the wonder is that reading possesses, in many cases, the moderate amount of intelligence that it does.

I see it not unfrequently stated that, *intelligent* reading is less common than it was before the introduction of Results system. I must say that my experience, now pretty lengthened in school-work, does not warrant me to coincide with this statement. On the contrary, I venture to affirm that there is in our schools, a general breadth of intelligence in all subjects, reading included, very much in excess of what was before the period in question. That this must be so, may, even reasonably be inferred, from a consideration of the present exact and methodical examination of the children; the regular promotion of the deserving pupils and the consequent introduction to lesson books, &c., differing in style, matter, &c. Besides, I may add that, every year's experience proves to me, that there is not that great want of intelligence in respect of subject matter, among children, that their reading might lead us to suppose. Their silence when interrogated, is, I find, often attributable to my own inability to at once strike on the way to elicit their intelligence; in some cases to their hesitancy in presence of a stranger, and in others to a want of due command of language to express themselves. Still, while giving all due credit for what has been effected in the schools in regard to reading, I am every day more and more forced to the conclusion that, in order to make reading what it should be—a real source of information to the people—it is imperatively necessary that explanation of words, phrases, and allusions, combined with a fair mastery of the subject matter read, occupy a more prominent place in the school course, than it hitherto has; and, that, a judicious course of examination on the subject, and a fee commensurate with its importance, be decided on. Until this is done the mere husks of knowledge may be nibbled at, but the kernel contained in books can never be reached.

Appendix B.
Report on
the State of
Schools.

Healy.

Appendix B.
Reports on
the State of
Schools.

Sr. Wm.
Hall.

Spelling.—This branch shows a lower per-centage than reading or writing; nor can this be wondered at as existing in our schools, when the great difficulty of the subject is considered; so great indeed, that, we know it to be the rock upon which men of the highest attainments perish in the various competitive examinations. The teachers are, I am happy to say, most untiring, as a rule, in their efforts to improve this branch. To ensure however increased attention to this highly important branch, I would venture to suggest that a higher fee be paid for it—the fee at present paid, not being in my humble opinion, commensurate with the importance and difficulty of the subject.

Spelling and reading act and re-act so much on each other, that hardly too much attention can be given the former; and as these, with writing and arithmetic, specially concern all school-going children, I confess I should gladly see, in simple justice to that overwhelming mass of children whose time at school is so short, *higher* fees paid for those subjects than for the few extras found sprinkled here and there in the schools. It is unquestionable that the relatively high fees at present paid for extras, seem as a direct temptation to venture on teaching some pet subjects—a course too often attended with injury to the majority of children, as well as of pecuniary loss to the teachers themselves. My view is that those subjects which are of universal importance, are the ones that in State-aided primary schools deserve first consideration, and their successful teaching the *highest possible* reward.

Writing.—Writing is very successfully taught in most schools of the district, the per-centage of passes having been 94.6 per cent. of the number examined in this branch.

In no subject of the programme, do I observe such marked progress as in writing. Formerly it was one of the most carelessly taught, and the worst executed work in the schools. Now all this is changed; a sufficient supply of writing materials is almost generally kept up; the writing is neatly executed, and the copy books are no longer the blurred and tattered things they formerly were.

The main defect noticeable at present in writing is, want of ease and freedom in the execution, and this to a greater extent than, I believe, it might be. I think the transcription and dictation exercises might, by due care on the part of teachers and pupils, be made the mediums of developing and finally establishing a proper business style of writing, which is the great desideratum to be aimed at.

Arithmetic.—The general results in this important branch were good, having been 71.8 per cent. of the entire *classified* pupils examined. This per-centage would have been still higher, but for the rather general failures in first stage fifth class. In reference to this class I beg to state that my experience leads me to the conclusion, that the present programme requirements are too extensive, especially in arithmetic and geography. In such a subject in particular, as arithmetic, which requires so great an exercise of thought, it is useless trying anything beyond what is fairly possible. Up to fifth class, the work demanded in arithmetic can be made up, to a great extent, by mechanical teaching; it is only when the pupils arrive at this standard, that the reasoning powers are called much into exercise; and, as the majority of the children now reach it, at a very tender age, too much ought not to be demanded. High pressure teaching may produce wonderful effects in most other subjects of the programme, but, in arithmetic, the laws of mind assert their supremacy and prove inexorable.

At present there is little time for explaining principles, hence arithmetic is becoming every day, even among the advanced classes, where

principles are so much needed, more dry mechanical operations directed solely to the obtaining of a pass. Card-work, carefully drawn up, simply to meet the requirements of the class in which the pupils are to be presented, is, I fear, too prevalent, a fact of which my secondary inspections and incidental visits afforded conclusive evidence.

Should it be observed that the results in other districts tally with mine, I trust the Commissioners may see their way to a modification of the arithmetical programme, from first stage fifth class and upwards.

Grammar.—The per-centage of passes obtained in this subject was 62·3. Though the results, judged by the passes, are good, still I confess grammar to be one of those subjects of which I can write in least commendation. Except in the very best schools, there is little or no evidence of its being taught, so as to fulfil the object of its place on the school programme.

Home lessons in grammar text are hardly ever found even tolerably mastered; hence, one cause of the unsatisfactory state of this branch. Indeed, home lessons in general are not well attended to, but this is specially true in respect of grammar, about which parents, as a rule, care very little. Seeing how grammar is taught in many schools, I look on it as mere waste of time, keeping young children *gessing* at the parts of speech, while, in numberless cases, they are not able to define a noun. So far as I am concerned, I should be very glad indeed to see grammar struck out of *third* class programme, and the fee now set down for it, given for explanation, or as an increased fee for spelling and reading.

Geography.—In this branch the results fell lowest of any in the ordinary course, having been only 55·8 per cent. of the number examined. I believe this to be owing chiefly to the very faulty mode of teaching the subject. The maps are rarely found judiciously used as the great aids of fixing the matter treated of in the text books. Seldom do we find the home lessons on this subject taught before the maps; hence, the poor children are mentally tortured trying to make up a lot of abstract matter, which a few systematically taught lessons in connexion with the maps would render both profitable and interesting, as also easy of acquisition.

As in arithmetic, so I think in geography, the yearly requirements from first stage fifth and upwards are too extensive. At present, unless an inspector interprets the programme of those classes rather liberally in geography, the number of passes, would be exceedingly few, while as to the sub-heads they are all but unknown.

This state of things is not desirable, therefore a modified and more definite programme appears to me to be in the interests of all concerned very much needed.

Agriculture.—The results in this very important branch are in this, as in the other districts of which I have had charge, exceedingly low both in quantity and quality. Why it is so in this district, so justly esteemed for its successful farming, is rather puzzling, yet the fact remains as stated. Pupils were presented in only thirty-seven schools, the total number presented was only 282, and the passes were only 110, or 39 per cent.; these being in general just *mere* passes.

The teachers complain that the works on the subject on Board's list are too recondite, and contain little to interest the young. I believe there is considerable force in the objection, and that, excellent as some of the works undoubtedly are for matured intellects, they possess hardly anything to arrest the attention of children.

Might not a work be drawn up, something in the style of "*Martin Doyle*," containing the soundest principles of an improved system of agriculture?

Schools.

Mr. Wm.
Healy.

Appendix B. Needlework.—The industrial department has attained a high standard of proficiency in the district. Of 1,550 girls examined, 1,429, or 92·1 per cent., obtained passes.

Reports on the State of Schools.

Mr. Wm. Hooley.

I may observe that it is my practice to require specimens of the more common articles of dress, executed by the pupils, to be exhibited on the day of results examination. It is very interesting to witness with what pride and pleasure the little ones present their different specimens. The execution, in my presence, of the samples required by programme serves as a check as to the *bona fide* character of the articles exhibited; while the articles themselves serve as a test as to the care and efficiency with which the industrial department has been conducted during the year.

"Cutting out" does not hold that place in the schools which it ought. The fact is, many of the teachers, at least of those with whom I have come in contact, do not seem to me to be duly qualified in this business. I think it should be made an essential for every female teacher to prove her qualifications in *cutting out* and *making up* the ordinary articles of children's wear. As yet this has not been so, while, paradoxical as it may appear, and in reality is, the pupils of the higher classes under such teachers are expected to *cut out*, in order to obtain a pass in needlework. I trust that steps may soon be taken to remedy this defect in female teachers' programme.

The Teachers.—It affords me pleasure to be able to unhesitatingly bear testimony to the general faithfulness and integrity of the teaching staff. All are not efficient teachers— but all, or nearly all, try to be as efficient as they can. In my intercourse with them, I have rarely any cause of complaint; I find them as a rule, ready to act on any suggestion offered with a view to correct defects. Socially, they are regarded as persons of most respectable, quiet, and blameless lives. In their habits they are moral, temperate, and frugal. All are making the most laudable exertions to improve their social conditions; their increased income is not, happily, so much ensnared to be wasted; a reasonable sum is being wisely laid up by each, against old age, or other casualty.

Eighty-eight of the 120 teachers in charge of ordinary day schools are trained. The classification of the principal teachers is as follows:—

Class.	Males.	Females.
I.,	4	1
II.,	16	9
III.,	32	12
IV.,	5	2
V.,	24	8
VI.,	3	1
Prob.,	3	—
Total,	87	33

The average income of male teachers from all sources is £75 9s. 7d. and of female, £56 19s. 11d. per annum.

Besides the foregoing staff, there are 59 assistants employed in the schools, and 64 monitors.

In the matter of local endowment a few of the schools are favourably circumstanced—prominent among which are, those under the patronage of Lord Bangor, Lord de Ros, and Colonel Words; nor, can it be omitted, that many clergymen, out of their slender means, generously give endowments in non-contributory unions, to prevent their teachers losing the contingent Results Fees.

School-houses.—These as a rule are very well fitted for their purpose; and, are generally kept in fair—in some cases—in excellent repair.

Residences.—The entire number of residences provided is only 24; it is to be hoped, that improvements under this head may soon take place.

In conclusion, I respectfully beg to observe that the general state of education in the district, is healthy and progressive; the patrons, managers and teachers of all classes and creeds, are earnestly alive to the importance of the work in which they are engaged, and seem as if vying with each other. I think it only right to add that, I receive from all, the most active and friendly co-operation, and that, as a consequence, but very few occasions have arisen for official interference, since my appointment to the district, in June, 1878. At nearly every Results Examination, the manager of the school, or his representative attends for at least a portion of the examination, to make himself fully acquainted with the state of the school. This active interest in the well-being of the schools, on the part of the great majority of the managers, is as gratifying as it is beneficial.

Appendix B.
Reports on
the State of
Schools.
Mr. Wm.
Healy.

I have the honour to be, gentlemen, your obedient servant,

WM. HEALY, District Inspector.

The Secretaries, &c., &c.

Mr. J. BARRETT, A.B.

Ballaghaderreen, 23rd March, 1881.

Mr. J.
Barrett.

GENTLEMEN,—In compliance with instructions duly received, I beg leave to lay before you my general report on this district for the period between 1st March, 1877, and 28th February this year.

I beg to state that this district is for the most part situated on the extensive plain lying south of the Ox mountains in Sligo, and that it includes a large part of the county, a considerable tract of Mayo, and a small portion of Roscommon, and contains the towns of Ballymote, Tubbercurry, Swineford, Charlestown, and Ballaghaderreen. The country is almost a perfect level. In a few localities there are some tracts of good clay land, which are held in large farms, but in by very much the greater portion of the district the soil is bog, more or less reclaimed, and is unsuited for farming on a large scale. This portion is held in small plots, most of which are under £4 valuation, and at rents of from £1 to £5 a year. Agriculture is the only local occupation, but the soil is poor, and the return from it quite insufficient to support the existing population.

The houses in which a great proportion of the people reside are small, and in several instances, merely turf cabins, frequently shared by the cattle. The furniture is scanty, and the accommodation generally insufficient and uncomfortable.

The chief source from which the people derive their support is the wages earned every year by the men from March to November at harvest work in England. About the end of March almost all the adult male population of the labouring classes leave home for that country, and immediately after their arrival there, they begin to send home money for the support of their families. The women and the more grown children have to do the spring and harvest work in their absence, and from the middle of April to the end of May, and from the middle of September to the end of October these children are much required at home. About the beginning of November the men return, and remain almost unemployed till the time for going to England comes round again. In winter young men of from sixteen to eighteen years of age frequent some of the schools, with but little benefit to themselves, but with considerable inconvenience

Appendix B. to the regular pupils, and, in many instances, girls continue to attend school up to a comparatively advanced age for want of any occupation Reports on the State of at home. Schools.

Mrs. J. Barrett.

Many families seem to live all their lives in advance of their incomes. Their annual means seem to be barely adequate for their annual wants, and quite insufficient to get them out of debts, and any deficiency in the return from the land, or from the earnings of the working members, is sure to be speedily followed by distress.

When I was placed in charge of this district in March, 1877, it included an area of over 600 square miles, and contained a population of probably over 150,000 persons. There were 139 schools in operation, and over 30,000 pupils on the rolls. In that year two new schools, non-vested, were opened, and grants for two new schools, vested in trustees, were made. In 1878 grants for four new schools, vested in trustees, were made. In 1879 two new day schools, and one evening school, non-vested, were opened, and grants for five new schools vested in trustees, were made. And in 1881 grants for two new schools, similarly vested, were added to the number of those already accorded. In March, 1879, the number of schools in operation had risen to 136; to these were added two schools from an adjoining district, and, at the same time, from the total of 138 schools, 32 schools were transferred to other districts, so that there remained in this district, within an area of about 400 square miles, and for a population of probably close on 120,000 people, 106 schools in operation; and since that time 4 of the vested schools have been opened, and the district now contains 110 schools in full work, and 5 new houses in process of erection, of which 3 are to supersede existing school-houses, and 2 are for new schools.

About the time I took charge, the teaching staff consisted of 128 principals, and 121 assistant teachers, with 90 monitors, and a few workmistresses, and there were subsequently 47 monitors appointed within the year referred to.

The house accommodation though in some cases pretty good, was, on the whole, unsatisfactory. In several instances the houses were of a very inferior description, and though no inconsiderable improvement has since taken place, the accommodation at present is too frequently, to an injurious degree, inadequate to the wants of the pupils.

In 1879 the weather during the summer was unusually wet. The crops did not ripen well, and the earnings in England were much below the average. The means of support amongst the working classes were short of what was required, and they were unable to meet their liabilities. In the beginning of 1880 credit had almost ceased, and distress began to prevail, and in the spring and summer there existed amongst the people a great deal of want and disease. Creditable steps were taken by benevolent associations in various places to supply food, and sanitary measures were promptly adopted to preserve and restore health. Several families were supported almost entirely by gratuitous aid, but in spite of all efforts want and fever became very general throughout a large portion of the district. One locality was especially afflicted, and the temporary assistant in the girls' school there, a young woman of great promise, who had served six years as mistress, and had answered over 80 per cent. on second class questions at the previous annual examination, as candidate for assistantship in a model school, got fever, and died. A vast amount of good, was, however, effected by the several associations referred to, and though there was a considerable amount of distress existing and impending, the period of pressure passed over with infinitely less suffering than without those efforts would have to be endured.

The assistance given consisted chiefly of food, and was administered by committees of which the local clergy were invariably members. Several of these members were also managers of schools, and knowing that the teachers were well acquainted with the circumstances of the inhabitants of those localities, they in many instances employed them to draw up lists of the names of the parties most in need of relief. Those lists were to be subsequently submitted to the committees, and tickets negotiable for their value, presumably in meal, were to be issued to the parties whom the committee considered it advisable to relieve. The selecting of the parties whose names were to be submitted to the committee, was a duty often very embarrassing to the teachers, and one which placed some of them in a very unpleasant position, but, so far as I have been able to learn, all of those so employed performed the duty with creditable intelligence and good faith. In many cases they declined to submit the names of parties who applied to them, but whom they knew to be unfit subjects for relief, and later in the year these teachers were (they allege for this cause) subject to a great deal of serious annoyance and injury.

*Appendix
Reports on
the State of
Schools.*

*Mr. J.
Barrett.*

Of the various efforts made to relieve distress in Ireland last year, the measure that affected the schools most directly, and that came most immediately under my observation was the aid given under the title of the "New York Herald Fund." By means of the grant in this case, a meal of bread was given every day in 60 schools in the district to every child who attended school, and who was willing to accept it. The distress actually prevailing arose not entirely from insufficiency in the quantity of food available, but also, to a great extent, from the want of variety in the food within reach. The New York Herald Fund met this want effectually. All the children were able to get a breakfast of Indian, or of oatmeal meal before going to school, and by means of this fund were enabled to get a dinner of good wheaten bread, and in this way were insured a change of diet, which was highly beneficial to them. Grants to the amount of £111 12s 2d. per week, during several weeks in June, July, and August, were made to the schools referred to, and each pupil willing to accept bread got one pennyworth at a time, and hence 4,464 pennyworths per day, were distributed during several weeks in the period in which the children were most in need of relief.

This distribution of food in the schools caused an immense increase in the attendance. The number on rolls in this district on 30th June, 1879, was 15,046, and the average attendance for the year ended same date, was 7,357; but though there were in June, 1880, causes, such as want of clothing, which tended to keep down the attendance, the number on rolls on 30th of that month had risen to 18,571, and the average attendance for year to 8,896.

Some of the school-houses became intolerably overcrowded. Effective teaching was much impeded, and the proficiency was in consequence reduced. In some cases the sanitary authorities had to interfere, but in others, even worse, the crowding continued till the harvest came in, and the distribution of food came to an end.

Though fever prevailed very generally through the district, and though the pupils were, in numerous instances, subject to the influence of contagion, and on the verge of want, I observed in the schools in even the most distressed localities, that the children presented a healthy appearance, and seemed hardly conscious of the conditions by which they were surrounded, and if many of them passed through that trying season, without physical suffering, and perhaps with unimpaired consti-

Appendix B. tations and unbroken spirits, it is I believe, under Providence, due to the timely and judicious aid afforded by the generous donor of the fund
Reports on the State of referred to.
Schools.

Mr. J. Barrett.

In consequence of the improvements made in the district in 1879, Swineford was found to be unsuitable for the "Official Residence" of the inspector, and in the following year the inspector's residence was changed to Ballaghaderreen. This change has been attended to by considerable economy in the expense of working the district, and also by important advantages in the way of railway accommodation, and of school-rooms in which to conduct the teachers' annual examinations.

In the 110 schools at present in operation in this district, the teaching staff consists of 108 principals; 103 assistants; 14 temporary teachers; and 103 monitors, and 5 workmistresses. These, I am happy to say, are as a body well conducted and respectable, and though the past year was one of peculiar agitation and excitement in this locality, the teachers intelligently and firmly resisted the influences which were working around them, and in no case did they prove unfaithful to their obligations, or to the real interests of the country.

The classification of the teachers is not as high as might be expected. The system of payments by results causes some teachers to look for improved incomes solely from that source, but I do not observe anything like apathy on the part of the staff generally as to promotion. A greater number apply to be admitted to examinations than can be permitted to present themselves, and at last examination alone three female teachers obtained promotion to first-class.

The institution of temporary assistants is working beneficially, and it appears to me that if these teachers were admitted to examination for classification as monitors are, the result would be satisfactory.

Of the monitors appointed in 1877, most put in their full time, and those who did so were examined for classification in due course; some succeeded creditably, but many of the others failed, and have during the last year been apparently unable to find suitable employment. I have long been of opinion that if three years be the period for which monitors are to serve, not more than one-third of the number available for any district should be appointed within any one year. If this arrangement were adopted, there would be a greater probability than at present that only the best class of candidates would be appointed, and that those who qualify at their final examinations would obtain employment in schools.

The management of the schools is in the hands of 25 individuals, 17 R. C. clergymen, 1 community of nuns, 1 superiress of a convent, 3 E. C. and 1 R. C. layman, and 2 R. C. clerks of unions. The clerical managers visit the schools very frequently, and exercise careful and valuable supervision over both teachers and pupils. Many of them have, by great exertion, raised funds in various quarters, and erected improved school-houses in their parishes, and one who is distinguished by his successful efforts in erecting school-houses with aid from the Board, has set a further good example by getting up for the teacher of one of them a very neat and comfortable residence under the Act. The lay managers are much absorbed in other duties, but their schools are working fairly. All seem sincerely desirous to make the schools as useful as possible to the children, and I feel bound to state that, it has never been my good fortune to be associated with a body of managers more efficient in the supervision of their schools, or with whom I have found it more agreeable to deal.

The schools under the management of the superiress of a convent, and which are taught by lay teachers, are the Ballaghaderreen Girls' and Infants' Schools, and are the largest and most important in the district. They are held in a magnificent building which has lately been erected at a cost of over £2,000, and a school-room 50 by 32 by 14 feet in dimensions, and which for lighting and ventilation, can hardly be surpassed. The literary departments are conducted by a highly efficient staff, and had on rolls on 30th June, 357 girls and 119 infant boys. They afford admirable examples of neatness and order, and are attaining important literary success. But besides these there are in the same building industrial departments which are of immense benefit to the children in the locality. In these departments pupils who have passed through the literary schools are taught cooking and laundry, and are put in a position to earn a sure and respectable support for life.

In the better classes of school-houses the state of repairs is satisfactory, but in the inferior ones it is by no means so. In a district like this, in which money is scarce and families are large, and in which most parents have to contemplate the certainty that the greater number of their children will have to emigrate, though they may give small sums towards keeping the schools in working order while their children are in actual attendance, they are by no means willing to contribute after their children leave, or to subscribe towards benefits which but few of their own descendants would be likely to enjoy, and the managers and the teachers have generally to effect at their own expense such occasional repairs as enable the schools to be continuously carried on.

The records of attendance are very neatly and I have no doubt accurately kept. The entries of school fees in Daily Report Books and on the Summary Rolls, are consistent with one another, but whether or not the amount of money credited has, in all cases, been actually paid, is beyond my power to ascertain. The entries of ages are I fear in many cases quite unreliable.

The supply of books and requisites is on the whole fairly kept up. Under the results system the teachers have a direct interest in keeping the children well supplied, and they contrive to do so very fairly. The stock of copy-books however frequently runs out, and in such cases the pupils provide any kind they can get, and do with them till they can obtain a supply from the Education Office. Copy-books of tolerably good quality are to be had in all the towns throughout the district, and on the whole pupils experience no difficulty in keeping themselves supplied.

I beg to state, that religious instruction is given in all the schools of this district without any exception. The amount of time devoted to it is generally half an hour per day, on each of the ordinary school days; but in many schools, from one to two hours are devoted to this subject on Saturdays also, and great care is taken by the clergy to ensure, that the instruction is efficient and the proficiency satisfactory.

As regards the literary proficiency of the pupils I consider that, all impediments to progress being allowed for, it may justly be described as very fair. Amongst so many schools there must of course be considerable diversity. In several schools the proficiency, at least, in the most important subjects, is satisfactory, while in others, no doubt, it is low.

In *Reading*, the proficiency is, on the whole, pretty good. The style is distinct, and free from vulgarisms, and peculiarities; but in explanation the general proficiency is extremely poor.

Appendix B.
Reports on
the State of
Schools.

*Mr. J.
Barrett.*

Appendix B. In *Spelling* the proficiency is good, and in all schools, "dictation" is taught regularly, and with considerable success.

Reports on the State of Schools. In *Writing*, also, the general proficiency is on the whole satisfactory. In all the schools the junior classes use extensively copy-books with suitable ruling, and in most schools, they are fairly superintended while writing, and taught to form the letters distinctly, and to draw them from line to line. In many cases I have found the writing of the junior classes highly creditable, and in not a few I have found the general character of the writing in senior classes, to be fit for any of the ordinary purposes of life, and in several instances, I have observed specimens of superior excellence.

Mr J.
Burnett

In *Arithmetic*, also, as far as the practice portion is concerned, I am bound to consider the proficiency is, on the whole, pretty good. It is the subject that receives the greatest amount of attention, and it certainly, has been taught with considerable success. In the junior classes, comparatively few fail to "pass"; and in the senior class, in which the pupils are always examined on printed cards, a very fair proportion succeed. There are, no doubt, several failures on the higher cards, but the proficiency is not in those cases so low as at first might be supposed, for no pupil gets a "pass" on less proficiency than is proved by the correct solution of three questions, and many may, and no doubt do, possess a useful knowledge of arithmetic, and yet in the excitement of a Results Examination fail to work correctly three questions on a first or second stage sixth class card. In notation and tables the proficiency is generally fair; in "long tota" it is creditable; but in mental arithmetic, I hardly get any successful answers at all.

In *Grammar* the proficiency is, on the whole, very low. The sub-heads are little known, and though the writing of letters, prescribed for sixth class, is a highly beneficial exercise, the practice does not appear to be well carried out. In parsing there is some success, but generally, the proficiency in grammar is unsatisfactory, and the subject appears to be regarded as of little use.

In *Geography* the proficiency is uneven, and on the whole, low. In some schools it is not unsatisfactory. The maps of the Continents and of Ireland are, in some schools, successfully studied, and in some instances, the pupils answer well on the elements of the mathematical and physical portion of the subject, but in the majority of the schools, this branch is not satisfactorily known.

In *Needlework*, the proficiency is generally high. It is taught regularly in the schools, and many of the pupils get exercises in it at home; but owing to the conditions of house life, it is the only school subject, which is much practised out of school.

Book-keeping is taught in the town schools, and in some of the country schools, but as yet with no great success. The exercise books are, in many cases, neatly written, and this, so far as it goes, is satisfactory; but not many pupils have attained clear ideas of the principles on which the art is carried out.

In *Agriculture* the proficiency is low. The subject appears to be unpopular with both teachers and pupils, and the text-books are but little understood. The teachers will, no doubt, for the future, devote more time and energy to teaching them; but their success depends very much on the disposition of the pupils, and unless that be made favourable to the subject, a long time will I fear, elapse, before their efforts will be productive of any considerable success.

As regards extra branches I have to report that they are but little

taught. They have been found to take up too much time, and divert the teacher's attention too much from the general business of the school, and, moreover, to be by no means sure to pay. Some teachers, however, keep up a class in algebra and geometry, and teach these subjects fairly. Some keep up a class in physical geography; and one or two teach book-keeping to girls; but the only extra branch taught to any considerable number is music, in which subject, some teachers, who hold certificates obtained in training, continue to maintain classes, and to earn some Results Fees.

As regards the improvement of the means of education in this district, the first point that requires attention is the school accommodation. Fully fifty of the houses in present use are insufficient in space; and several are inferior in materials and construction, and deficient in light and ventilation; and many are unsupplied with out-offices. Of the schools which are deficient in space, some are vested, and cannot be struck off the roll; others may, of course, be deprived of the assistance of the Board; but the poverty of the population in most, if not in all, of the localities in which they are situated, makes it certain, that if the grants should be withdrawn, many children would have to let their whole school-going life go by, without education--and hence, had as these houses are, I am satisfied that it is advisable to retain them. The managers are, I know, sincerely anxious to provide suitable school-houses as expeditiously as possible, but considering the circumstances of the people, and the objection still existing to vesting school-houses, I fear there is no likelihood, that very great improvements will take in this respect, within any definite time. And unless Guardians of Poor Law Unions be compelled by law to rent houses for school purposes, and to pay the rent out of the rates, localities such as I refer to, must long continue to be deficient in suitable accommodation for schools.

As regards recording attendance of pupils, I am of opinion that a roll-book, which would show the attendance for each results year, on a single folio, would greatly relieve teachers, and facilitate inspectors, in their respective duties, and that a roll-book sufficiently large to admit of this, and yet, of a size by no means unmanageable, could be adopted, I have no doubt; and I therefore beg leave to submit the suggestion for consideration.

As regards the supplying of books and requisites, I beg leave to recommend, that a copy or two of the form for application, should be sent with every parcel, so that the teachers might be able, when necessary, to order a new supply without delay.

As regards the course of instruction, I am of opinion, that the infants in the higher stages, might with advantage, be got to write on slates; that first class might be supplied with a more extended lesson book; that the third class might be got to write "dictation" on paper; that the course in grammar, for all classes, might be reduced; and that the rules for mental arithmetic in the Board's small treatise might be printed separately in the same form as the halfpenny table book, and sold at the same price.

In conclusion, I trust, I may truly observe, that in the four years during which I have been here, the district has been progressing fairly. The area was reduced to a moderate size; several new schools was opened; the attendance largely increased; and the work, though considerable, has been brought quite within the power of any efficient inspector.

Within that period, I reported on seven applications for grants for

Appendix B.
Reports on
the State of
Schools.
Mr. J.
Barrett.

Appendix B. non-vested, and on ten applications for grants for vested schools; and in six of the former, and nine of the latter cases, my recommendations were adopted, and have led to satisfactory results.

Reports on the State of Schools.

Mr. J. Burwell.

Within the same period, I superintended four annual examinations of teachers, and, to the credit of those examined, I have to report, that in no instance, did there occur anything that could establish on reasonable grounds, even the slightest doubt, as to the perfect regularity of the examinations, or the thorough genuineness of the work done.

In July, 1877, I was struck down by a severe attack of scarlatina, and was unable to resume duty before the end of September, same year; but I was nevertheless, within these four years, able to examine 9,112 pupils for secondary reports, and 31,836 for Results.

The inspectors' assistant was employed in this district from 7th January to 14th February, 1879, and another from 3rd August to 3rd September, 1880; and again, from 1st to 26th February, this year.

I have the honour to be, gentlemen,

Your obedient servant,

JOHN BARETT,

District Inspector, National Schools.

The Secretaries, &c., &c.

Mr. J. B. Skeffington.

MR. J. B. SKEFFINGTON.

Bailioborough, 28th February, 1881.

GENTLEMEN,—I have the honour to furnish my second general report, in compliance with your instructions.

About two years ago the limits of this district were altered so as to include ten neighbouring schools, excluding an equal number; these latter are, however, large, with one or two assistants in each, most of them vested in the Commissioners, and provided by Lord Bath, the patron, with residences, farms, or endowments for the teachers, of whom the majority are well classed, having had the advantage of education and training in the Bailioborough Model Schools; a relation mutually beneficial, and desirable to be maintained.

The schools received on the contrary are non-vested, half of them inferior structures, with small attendances, and low-classed teachers, none of whom had been taught in Bailioborough.

School-houses, &c.—There are still too many unsuitable or inferior buildings, very many without proper out-offices, a large number but indifferently fitted-up and furnished; yet it is pleasingly evident that there is considerable improvement in these regards, and good hope of further progress, which the pressure of recent "hard times" has doubtless retarded, managers protesting it would be useless to attempt to get up subscriptions where relief committees were common. The erection in different localities of several vested schools, excellent, spacious, lofty, cheerfully lighted, thoroughly ventilated, comfortably and con-

veniently fitted-up, equipped with a good supply of apparatus, and having suitable appliances for health, decency, and cleanliness; such examples dispersed in various directions do much to enforce appeals for improvements, and many managers express approval and desire to imitate: thus public spirited and philanthropic persons in furnishing examples, do much good beyond the immediate school populations they mean to benefit. Besides the two new vested houses, two of the applicant schools were already well got up, several have been enlarged, some improved, others refitted with desks; racks for clothes and shelving for copy-books, &c., are useful, and can be cheaply provided. Many schools, however, at certain seasons, and several at all seasons, are overcrowded; for the maximum attendance is often very different from the average, sometimes double the latter. It is to be greatly regretted that efforts to get up schools have been in several cases frustrated: in one case the three-mile limit, in another the leasing powers of grantor, in others unwillingness of the owner of the ground or the holder of the land, keep large numbers deprived of the benefits, material, mental, and moral, entailed by the possession of suitable school-houses. In some cases the grants are declined, when, if repayable by instalments, they might be accepted.

Appendix B.
Reports on
the State of
Schools.
Mr. J. B.
Donaghy.

While the large majority of the schools are kept up in reasonable repair and suitably supplied with apparatus, yet in many cases such matters call for repeated reminding; indeed whitewashing once a year appears generally quite insufficient, four times a year would be much nearer the mark: the fourteenth and thirtieth recommendations of the Primary Commissioners offer suggestions on these points, but as parts of a general system which must be considered separately: what can be done is done to induce managers to provide for these, or teachers to procure them by aid of the pupils' subscriptions; and on the whole the improvement is pretty continuous—late years have of course been unfavourable in regard to funds for such purposes.

The provision of a constantly renewed supply of sale-stock for pupils' use, also requires careful attention in a minority of the schools, lest copy-books, ink, reading books, &c., may run out. It is, of course, well known that money advanced for books can scarcely, or with very great difficulty and long delay, be re-collected, especially as complaints of the dilatoriness of pupils in purchasing these requisites have lately been more frequent: no doubt a school well supplied with materials will turn out much better at results, and thus make up the loss to the teacher; it seems to be desirable, however, that some reasonable discount were allowed to teachers advancing the cost of books, &c., not necessarily a discount involving profit or payment; but at least so much as on the average to insure against loss would appear only fair, and would surely be a great inducement.

Proficiency, &c.—At the outset it is proper to consider how far the system is accountable for the state and progress of education in the district. Were the selection of sites, the erection of schools, the appointment of teachers, regulation of hours, &c., entirely at the disposal of the Commissioners, then the Board could be fairly tasked with the amount, quality and degree of instruction afforded, in fact, should be directly responsible for the primary education of the people. It is plain that quite contrary arrangements hold for most schools, the local parties undertaking the fixing of schools, appointment of teachers, &c., thereby become directly accountable for the results; while the Board only interfering in extreme cases, that is fixing the minimum attendance to

Appendix B. constitute a school, laying down the lowest scale of qualifications that will be accepted in the teacher, the least number of hours of instruction, of school days, and of minimum proficiency for classes, it follows that it is only directly with securing to the mass a *moderate* share of education that the system can be fairly tasked, and in most cases can only indirectly foster and encourage a better quality and higher degree of instruction. It is not intended to imply that this tender regard for the rights of minorities and jealous care for conscientious scruples are misplaced, or to suggest any change in these regards; but it is plain that very small schools cannot generally be of a very high order while a teacher's attention is divided among ten or a dozen classes of two or three pupils each without the aid of assistant or monitor; nor can the educational interests of a locality be highly advanced by a teacher who has with difficulty entered, and who cannot rise from the lowest grade. It is only in the Model schools that the conditions are systematically different. In many of the other schools also the managers avail themselves of the skill and experience of inspectors in the selection of teachers, but this, of course, is optional, and often prevented by local interests. The less direct power there is, however, of enforcing, the greater need is there of all possible indirect means being used to reward excellence, to stimulate effort, to excite enthusiasm, and to maintain for imitation as high a standard of excellence as can be attained.

Results.—The most general, constant, and beneficial stimulus is the system of results payments; but to make it effective the fees should be as large as possible, so as to counterbalance that *love of ease* and *repugnance to exertion*, which are the greatest impediments to progress; it is, therefore, well to find that the total amount earned in this district continues to increase, notwithstanding exceptional seasons and harvests; while it is to be regretted that in a few cases the second moiety of results fees could not be obtained owing to deficiency of local aid, which might have been made good afterwards had the old arrangement been in force: indeed it is clear that this risk of results earned exceeding by a trifle the local amount, tends to discourage exertion, which might be used to urge in pupils for examination, and tends also to tone down zeal in preparing them to pass. Here it may be observed that it would be much easier to have the local aid, were payments in kind, work done for teacher, rent of residences, value of land, &c., included: these are as real and as valuable as money, and it is hard to see why they should not count at a reasonable value, especially as by a perfectly fair double transfer of the equivalent cash, credit could be taken for the amount: in one instance a teacher having an excellent house and six acres of land free, could not avail himself of their fair value, and but for the generosity of the manager would have lost one-half his results fees. Only a few schools in one Union are fortunate enough to get the full results fees, which would do so much benefit if all schools were thus favoured.

Attendance.—The average attendance is a good deal higher than at last report, and but for the heavy failure of crops in 1879 would have been much more so, as there was a great increase till the pressure began; but the winter of that year and the succeeding summer were very unfavourable to attendance at schools, on account of the general poverty and especial want of fuel and clothing. There are now unmistakable signs of recovery, notwithstanding the temporary check of this unusually severe winter. The numbers examined for results last year also show a very considerable increase on the totals shown in my last report, an

increase which would have been much more marked but for the circumstances just alluded to, as proved by the great increase preceding the unfavourable seasons.

Classification.—The classification of the pupils exhibits a continuous rise; in several schools it is very high, more than half the pupils being examined in fourth, fifth, and sixth classes, in some perhaps too high considering the ages of the pupils. According to the returns for the year ended 28th February, 1879, it appears that of those examined for results 37 per cent. were in senior (fourth and higher) classes, somewhat over the average of all Ireland; while for year ended 28th February, 1880, it appears that over 30 per cent. examined in this district were seniors (fourth, fifth, and sixth), a very large and satisfactory advance; for all Ireland same year the senior classes were but 28·8 per cent.

When on this matter of classification I might allude to an observation made in the reports for the year 1877 and not since noticed, where an Inspector stated that 22·0 per cent. of the pupils examined in his district "were presented in fourth and higher classes," adding, "This proportion corresponds pretty closely with that given in the Commissioners' Report for 1876 in all Ireland," and thereon remarking, "This cannot be regarded as a satisfactory return, and in this respect at least the results system does not appear to have effected any improvement, as the Commissioners report that in 1867 there were 23·2 per cent. of those on the rolls of all National schools in third and higher books, while in 1876 there were but 22·5 per cent. in fourth and higher, the third book of the former year being the fourth book of the latter." Now, in the first place, the proportion for all Ireland was for that year very considerably higher than for the district referred to, namely 24·9 per cent.; in the second place the classification both on rolls and for results has been continuously rising year by year, as shown by the returns; thus for 1876 we have of seniors (fourth, fifth, and sixth) on rolls 23·5, examined 24·9 per cent.; for 1877 on rolls 26·5, examined 25·7; for 1878 on rolls 28·7, examined 26·8; and for 1879 on rolls 30·1, examined 28·8. Surely this is improvement, continuous and steady. Thirdly, without stopping to compare minutely the old classes, third, fourth, and fifth, with the new fourth, fifth, and sixth; or to inquire how far the higher classes were swelled in 1867 by the withdrawal in 1866 of the old sequels; passing over the facts that our present highest reading book had not been brought into use at all in 1867, and that the next below that was only issued in September, 1867, from which it appears that really but one of the present *high* series of reading books for senior classes was practically read in 1867; omitting all this, and taking the new classes to represent the old, we find that of the 23·2 per cent. in higher classes in 1867 only 6·8 per cent. were in the two highest, fourth and fifth, while in 1876 we have 11·4 in the two highest, fifth and sixth, 13·6 being in that same year examined in these classes; again for 1877 we find 14·3 per cent. enrolled and 13·7 examined in fifth and sixth; in 1878 there were 16 per cent. enrolled and 15 examined similarly; while by the last returns for 1879 these percentages were 17·3 and 16·6, thus again showing sustained and progressive improvement. Fourthly, if we try to find how many were in 1867 enrolled in the highest class (fifth) we have no means of accurately ascertaining the numbers in that class being apparently so small as not to be worth tabulating; but we have it on evidence of the highest order that in 1867 "third class teachers rarely have Fifth Book classes in their schools;" it is scarcely necessary to say that such

Appendix.

the State of
Schools.

Mr. J. B.
Staglington.

Appendix
Reports on
the State of
Schools.

Mr. J. B.
Slingstaff.

is far from the rule in regard to the highest class now; according to latest returns there were five per cent. enrolled, and nearly five per cent. examined in the sixth class in 1879. Fifthly, there is a more important element than either enrolment or presentation, namely, the numbers that succeed in passing; now we find that of all the pupils examined in reading in 1867 only 18 per cent. were able to read the higher books (third, &c.), while in 1876 the passes in the three highest (and much more difficult books), as tested by individual examination, gave over 22 per cent., which has risen every year since to 26.6 per cent. in 1879: thus a serious charge against the results system is disposed of. I have referred to this because of the generality of the case and definiteness of the statement, having been myself somewhat surprised by it, though believing it unusual; others may have taken it for granted without inquiry and comparison. The proficiency in arithmetic cannot be compared, as the tabulations in 1867 do not give the class returns separately, and as such returns would scarcely be of any value compared with the severe test now applied by separate cards to be worked on paper. In penmanship the per-centage of passes in 1867 was but 55, while in 1876 the corresponding per-centage had risen to 86, and has since gradually increased to over 93 per cent. In like manner the per-centage of passes had risen from 58 in 1867 to 75 in 1876, and has regularly gone up to 80 for last returns. Similarly for grammar and geography we find the passes 36 and 46 per cent. respectively in 1867 up to 52, and 51 severally in 1876, and since gradually advanced to 60 and 58 per cent. in 1879. This is independent of book-keeping, agriculture, and the various extra branches now extensively taken up; not to say that the returns are at present obtained from detailed marks opposite the names of individuals, after minute examination of each; it will scarcely be considered that the examinations or returns were of the same nature or character in 1867.

Standards of Examination.—In order to compare returns of different periods, so as to form an adequate idea of the rate of progress and comparative state of schools at various intervals, it is necessary to have some means of comparing the standards of examination applied at different times; such a means we possess in the circular of 5th February, 1862. The instructions therein given show on what conditions the character of a school was then determined as regards the primary branches, reading and writing; judging by these standards most of the schools here would now rank as "*quite satisfactory*" in reading, a category which required the upper classes to read the earlier lessons of their own books, and the lower classes the lessons of more elementary books; while there are scarcely any of our schools that would not be at least "*fair*," a designation which required only all the highest class to read the earlier lessons of that book, part or the whole of every other class being allowed to read an easier book than its own; and I should say that almost all the schools in this district would rank as "*quite satisfactory*" in writing, as to gain this character only the highest class were required to write freely, while the second class were allowed to write on slates. Details are not given as to the other subjects, but, reasoning in an analogous way, it may be assumed that our standards are now much higher, and that our schools, therefore, if judged by former standards, would rank very high.

Classes of Schools.—It appears proper that in arranging schools in grades or classes two distinct views of them should be taken, one embracing the numbers, classification, and positive proficiency of the pupils, the other regarding the order, neatness, and cleanliness of

school and scholars. The highest group of schools would do credit to any system, and are quite equal in all regards to high class or intermediate schools, save that the instruction they impart is rather solid than showy, rather useful than ornamental. In the best of these schools the pupils are found every day in the same state of perfect neatness and order as is found in all schools on results day; the pupils are always in thorough discipline without restraint or harshness; they look happy and seem at home; they are drilled to their business, and go through the movements with strict regularity without bustle or noise, pass from desk to drafts, take places, &c.; their countenances are bright with intelligence; the teacher rules and guides the whole without appearing to exert any effort, or to employ any compulsion, seeming merely to suggest the necessary changes: what a boon such a school is in a locality; what a lasting impression and beneficial effect this early training must cause long after school days are over; the sense of harmony, love of order, taste for cleanliness; are likely to remain with the adult, and in all probability affect the tastes and habits of the next generation. Such schools are generally highly valued, the pupils grow attached to the teacher, the parents desire to have their children in so healthy an atmosphere, the attendance is regular, and the proficiency high. The aim of course is to elevate each school in grade and advance it in rank in the two directions of proficiency and discipline.

Stoughton.

Class Subjects, Reading.—The paramount importance and surpassing value of this branch having been at repeated inspections pressed on the attention of the teachers, it is satisfactory to find that much improvement has been effected, to the great benefit of the schools in all other branches of learning. That this progress is real and marked cannot be in the least doubted, since during my early rounds of inspection, acting on the advice of an experienced and able superior, and as seemed proper and natural every allowance was made in this and other subjects for change of examiners, so that the pupils might be as little disconcerted as possible by any alteration in their accustomed modes of going through their exercises; thus at first the rather earlier and more medium lessons were used as tests for reading, while in the more recent rounds of inspection I expect and generally find the classes able to read any part of their books, in fact a satisfactory pass means that the child can read any proposed lesson with a degree of correctness, freedom, and intelligence suitable to its age and class; often indeed the accuracy and fluency of the reading is surprising, even when the most difficult lessons in the third, fourth, and fifth books are selected, though of course should a pupil fail to read these very severe tests and easier lesson is always substituted, but very frequently this is not at all necessary, and in many schools the pupils seem to read all the lessons with satisfactory facility. The reading tests prescribed in circular of 1863, above referred to, seem easier for second book, but for the higher books properly propose "reading in a way to satisfy the inspector that the pupils understand fully what they read," thus recognizing that the manner of reading, especially of a strange paragraph, is in itself a good test of intelligence; when, however, the lesson is familiar to the pupil, facility may not indicate real reading, and for this reason it is desirable to give two or three rounds of reading in different lessons, till reading cards or sheets be prepared specially as tests. It appears somewhat unaccountable that pupils presented for the second time in sixth class, that is at first time in the second half of sixth book, cannot earn fees on No. 2 passes in reading, since the matter is new to them and very difficult, and further since these are the very pupils that may make maximum attendances.

Appendix B. It is a well established axiom that it is necessary to keep pupils up for some years at a pretty high standard, in order that they may not on leaving school forget and lose that little learning which cost so much to acquire.

Mr J. B. Shefferson. The Biographical Sketches, the Literary Class Book, or the Selections from the Poets, might be read for successive years, always requiring a new book for each fresh year.

The introductions and explanations now given at the end of the sixth book form an interesting and valuable feature of that work, and reflect much credit on the literary taste, dialectic skill, and varied knowledge of the annotator; but it would be well that the mere *dictionary* meanings were replaced by more of the fuller notes, which are so useful to teachers as well as pupils; and these notes would be much more available, and, therefore, much more extensively made use of, were they given in the form of foot notes to the pages referred to; while, if placed at the end in an alphabetical arrangement, would much facilitate reference, and save repetition. As to the derivations it must be said that, however good such a treatise may be, and however proper for a Grammar or Spelling Book, in its present form (of an alphabetical arrangement of roots), it is difficult to see how it can be availed of in the way of reference, since in the Reading Lessons the learner wishes generally to find the root of a given word, while the list requires that he should know the root in order to search for it. The truth is, however, that in such a work as the sixth book, the derivations should be a help to the meaning and application, and accordingly it is plain that the roots, &c., should be given under the explained words as part of the notes, which could then trace the secondary applications, as well illustrated by the examples explained in the introduction to the lists of roots, &c.

Explanation continues to improve, though more slowly, because it has no effect on the Reading Pass, and because it requires teachers of superior education and intellect. In many schools, however, the proper methods are now being pursued, especially by the younger teachers, the old can scarcely be moved out of the fixed groove, or persuaded to leave the beaten path they are familiar with. As already suggested the tests in reading should be in texts other than those used for teaching, especially in the higher grades, and thus intelligence would be enforced; also the higher pass should involve a fair acquaintance with the sense and meaning of the passage read; and again here as under other subjects, it would be very desirable to give a higher fee for the satisfactory pass; until this be done the really superior schools will not be sufficiently encouraged, nor intellectual teaching properly rewarded. Certainly removals from class to class should require the higher pass, as nothing conduces more to after failures than the promotion of those indifferently qualified in their own class. Intellectual teaching, of which intelligent explanation is one effect, presupposes aptitude in the teacher as well as a pretty advanced culture and good training for the profession; it can, however, be promoted or retarded by the aids and encouragements held out, the mode in which programmes are drawn up, the works used in schools, &c.

Pennmanship.—The results in this second branch in point of importance are generally satisfactory, and continue to indicate progress, as the tests in fifth class and sixth class are now wholly by dictation, and the same test might be relied on in fourth. There should, however, be required for sixth class writing on *ruled* paper. The aids for the teaching of this branch are much more complete than those for reading and other subjects, the varied and excellent series of copy books now on the list

furnish ample choice, while the graduation of the system makes progress easy and certain with a moderate amount of care. Speed is an element too often overlooked or undervalued in the effort to reach some arbitrary standard of excellence, and in some schools in which imitation of headlines had been carried to a high degree of exactitude, the slowness of execution was often painful, and drew out the written part of the examinations to an inordinate length. The pen should be held in the position most favourable to facility of writing, and calling for the least muscular exertion of hand and fingers; the pen, fingers, and hand are all moved with greatest ease and speed in certain directions; generally the rest on the tip of the little finger tends to give the point of the pen a sort of progressive motion in oblique directions, hence the greater natural speed of angular writing, and the retardation caused by careful rounding of curves and corners, so that a *medium hand*, neither *too round* nor *too sharp* seems best adapted to general use, while special hands may be required for particular descriptions of writing.

Appendix A
Reports on
the State of
Schools.

Mr. J. B.
Stoughton.

It seems strange that a valuable suggestion in reference to the ruling of the copy lines, given some years ago by Mr. Inspector Newell, has not been availed of in any of the series of headline copies.

Spelling.—I have already expressed, and still believe (a) that oral spelling should form no part of a Results Examination, unless in the very highest classes where the application of the rules for spelling might be taught; (b) that letter writing should be taken under spelling and writing jointly; for this latter exercise cheap paper and envelopes on the list would be useful. Dictation exercises are improving, partly from the greater amount of attention given to written exercises, including transcription.

Arithmetic is generally well worked in the junior classes up to third, every satisfactory pass given by me in the third class indicates that the pupil can work simple long division accurately, a very definite stage of progress. It is well known that sums in the higher classes do not generally give such high results as in the other elementary subjects. I am glad to say that improvement is being effected in the form and correctness of the work in these classes, through the use of cards and written exercises in preparation for results examinations; but it does appear that this subject might be more intelligently and more usefully taught, and that a suitable adjustment of the programme would tend greatly in this direction. In the more elementary stages greater attention must be paid to an intellectual treatment of the subject, carefully graduated and adapted to the expanding capacity of the tender mind. Thus arithmetic may begin with infants, and here the duodecimal arithmeticon does much harm by giving a totally false conception of our system of numeration. Infants may add and subtract mentally at least. First class should also both *add and subtract tens and unite*, and thus the real connexion of these complementary exercises would be felt from an early stage: the principle of borrowing and carrying can be made quite plain with such short and easy exercises of two places, and the results as well as the data can be brought home to the child's mind in a way that cannot be done with large numbers.

The space at my disposal only allows of brief reference to the Bailieborough Model Schools.

It may be stated that the school fees, amounted to over £130 for the past year, a large sum (which proves a great deal) in a rural district during the late stress: the average attendance for the year 1880 reached the highest yet attained, and the numbers last examined for results exceeded those for any previous examination. The confidence reposed

Appendix. by all parties in this school continue unabated; its tenor and character
Reports on are steadily sustained at an elevated stage, and it occupies the interesting
the State of position of a typical Model School, and a Provincial or rather District
Schools. Training School.

Mr. J. B.
Sheffington.

I have the honour to remain, gentlemen,

Your obedient servant,

J. R. SHEFFINGTON, District Inspector.

The Commissioners, National Education, Ireland.

Mr. P.
Connellan.

MR. P. CONNELLAN.

Trim, 26th March, 1881.

GENTLEMEN,—In compliance with your instructions I beg to forward for the information of the Commissioners the following general report upon the schools of the Trim district.

Since my first Report on the district two years have elapsed—two uneventful years in the history of the schools of Meath. If it may be said of a school district, as of a nation, that it is happy if it has no history to record, my district is happy indeed. There is no wonderful progress to chronicle, no revolution in the mode of teaching, no great improvement in the position of the teachers; but I think there has been no falling off in any respect. Where any system—or any piece of machinery, &c.—has been long established, all that its superintendent can prudently do is to keep it in good working order. The system of National Education has been so long established in Meath, and so universally accepted, that it has become a settled institution, almost necessary to the existence of society. So smoothly and calmly has the work of inspection gone on, that I may say that my duties for the past two years have been confined to the examination of the pupils, and furnishing Reports of their answering to the Education Office. I have had other work outside the district to which it is not necessary to make further reference in this report.

Since my last report for 1878 the following schools have been transferred from other districts to mine:—

Batoath, male and female, Yellow Furze, male and female, Slane, male and female, Kentsdown, male and female, Chingworth, Cresswood, Cushinstown, Rathdrinagh (total 12); and the following have been transferred from my district to others:—Carraba, Cullinallon, male and female (total 3).

Three small schools, viz., Allonstown, Balnathbarry, and Clearmellon (No. 1), have been struck off the rolls for various reasons.

One important addition has been made to the schools of the district. Kells convent has become re-connected with the Board after a separation of about twenty years.

The number of operative schools in the district stand thus:—

Ordinary,	.	.	111
Model,	.	.	2
Peer Law Union,	.	.	5
Convent,	.	.	4
Total,	.	.	122

The average attendance in the ordinary schools for the past year was 43·3; in the Convent schools (excluding Kells, which has not yet been a year in connexion with the Board), 245·2: average for all the schools of the District 47·3. The corresponding averages for year 1879 were 40·1, 223 and 45. It will thus be seen that there has been a slight improvement in the attendance during the past year as compared with the preceding.

Appendix.
Reports on
the State of
Schools.
Mr. P.
Counselor

School-houses.—In my report for 1878, I stated that there were only four utterly bad school-houses in the district. The hope I then entertained and expressed, that suitable houses would be provided in these cases has not been realized. The circumstances of the times may account, to some extent, for my disappointment; but at my next visits to these schools I shall recommend the withdrawal of the grants; and then perhaps means may be found to secure proper school accommodation. The managers must admit that due notice has been given, and sufficient forbearance exercised.

Managers.—The management of the schools is, almost without exception, in the hands of the very persons in whom such a trust should be vested; and I can testify that their duties in regard to it are faithfully fulfilled. Owing to the sparseness of the population the duties of managers of schools are much lighter here than in other parts of the country; and of course, they are consequently, more efficiently discharged. A manager in Meath has rarely more than three or four schools to look after—generally fewer—while in other parts of Ireland with which I have been officially connected; from six to twelve was not an unusual number of schools under one manager.

Teachers.—The classification of the teachers remains almost the same as when I wrote my last report. A more intimate knowledge of their condition enables me to say that the great majority of them—indeed almost all—are in comfortable circumstances. Nearly one-half are provided with free residences within convenient distances from their schools. The three extensive Poor Law Unions of Trim, Navan and Kells, in which most of my schools are included, are all contributory. There are a few—and only a few—who, some from unhappy surroundings, some from unfitness for their office, are unable to live as teachers should live. But in no case is poverty, or pecuniary difficulty, attributable to bad conduct or improvident habits. Two teachers have lately retired on pension; a few others will soon follow. To the old teachers the prospect of a retiring pension is cheering; to the young the advantages of the present scheme are not so clear or encouraging.

Besides the advantage of getting old teachers to retire without unpleasant compulsory interference, it is reasonable to hope that the immediate and prospective premium attached to high classification will induce the teachers to aspire to, and qualify for it. I have this year more candidates for admission to the ensuing examination with a view to promotion than I have had for several years. It is but right that the highest class salary, attainable by a teacher, should be something worthy an able man's ambition; but the conditions of its attainment should not place it beyond the hope and reach of a man eminently successful as a schoolmaster, but who might, at the same time, be somewhat deficient in that knowledge of books, and that readiness of answering, which enable men to make brilliant examinations.

Monitors.—These form an important, and to an inspector, a very troublesome feature in the work of education. As I have reason to believe that new regulations regarding the employment and examination of the young persons will soon be issued I shall not now further refer to them.

Appendix B.
Reports on
the State of
Schools.

Mr. P.
Counsellor.

Examinations.—The principle of the system of payment by results is not to be discussed; but I hope it will not be considered going outside the lines of my instructions if I make an observation regarding its effects. It has now been sufficiently long established to justify an inspector in speaking of it without exposing himself to the charge of indulging in speculation, or foregone conclusions, or debatable theories.

My knowledge of the primary schools in Ireland goes far back before the inception of the "results" system—the system which most teachers now look on, and speak of, as the "task-work" system. I can remember the time when a good teacher's ambition was to be considered the protector, the guide, the nursing father of his pupils; when his anxiety by day and night was directed towards their welfare, rather than his own profit; when he read to acquire means of illustrating references, of elucidating difficulties, of simplifying words and phrases; of rendering smooth and interesting the path of knowledge to those unprepared or opening minds confided to his care. I remember too, that against all odds—and they were terrible—he tried to study the minds, and tastes, and dispositions of his pupils, with no light from books, no association with cultured intellects, with scarcely any hope of appreciation by those above him. He was impelled and sustained by a love for his calling, by an identification of his own interests with those of his pupils. These were some of the qualities which distinguished the good teachers of my early days.

I greatly fear these noble motives of action are fast disappearing. A pupil is now too often regarded by a teacher as a subject into which knowledge is to be ground, and out of which it is to return to him in the shape of results fees. The pupils and their parents are beginning to understand the new relations. I do not presume to forecast the result of this state of things. I am not arguing, I am merely giving faint expression to a thought that has grown into a belief with me.

For reasons which it is unnecessary to specify or examine, the profession of teacher has been always held in high esteem by the Irish people, and is so still, but in a diminished degree. I believe that if laws and regulations succeed in degrading teaching to a trade, they will also succeed in degrading, and finally destroying that Irish national tradition and sentiment under the influence of which the office of teacher was sure to command respect.

I am happy to be able to state that very friendly relations still exist in this district between parents and teachers. In a former report I mentioned with pleasure, as a sign of such good feeling elsewhere, that many children in cold winter weather came to school barefooted on examination days. This year I have been astonished by a circumstance which I think worth recording, as bearing upon the point under consideration. During the terribly severe snowstorms of last January three sisters regularly attended school. One of them caught cold and died. On the day after her death I examined the school, and although the mother was mourning over the dead body of her child, she sent the other two to school for examination. Every thoughtful mind will draw conclusions from this fact. I give it as an illustration of the thirst of the Irish people for knowledge, and their gratitude to those who impart it. If such a people were tolerably comfortable, laws compelling them to send their children to school would surely be unnecessary.

Examination.—It were much to be desired that some special provision could be made for the examination of schools suffering from exceptional difficulties which could not have been foreseen; such as epidemics or very severe weather occurring at, or immediately before, examination time. I think that either special rules should be made to meet such

cases, or a discretionary power should be given the inspector to exercise *Apposite R.* greater leniency than on ordinary occasions.

Before concluding these few general observations, I beg to say that while the results system as applied in Ireland, affords the inspector *Reports on the State of Schools,* ample opportunity of *testing* the teaching he has little or no opportunity of *witnessing* it. While, therefore, he can safely offer an opinion as to the quantity, he has but very meagre data from which to judge the quality or method of the teaching; one consequence of which is that his knowledge of the teachers' powers is much less intimate than formerly. I think this is an evil, and one for which I can suggest no remedy but an increase of the number of inspectors, or inspectors' assistants. Of course the question of expense here enters; but I write only in the educational interests of the Irish peasantry; doubtless the Exchequer will take care of itself. *Mr. P. Connolly.*

Subjects of School Course.—The instructions received from the Commissioners through the head inspector of the district at the recent conference of inspectors held in Dublin, render unnecessary many of the suggestions I had purposed offering with reference to the school programme. My observations under this head shall, therefore, be brief. Indeed in any case I cannot see the advantage of occupying space with elaborate suggestions upon points that have for many years engaged the attention of the whole inspection staff, from the highest to the lowest. By this time the Commissioners, the inspectors, the teachers, the intelligent public—all know more or less clearly what are the weak points in the method and results of teaching in our schools. I venture to repeat what I stated in my last report, that it is for the statesman rather than for the educationist to provide a remedy for most of them. Neither shall I obtrude any account of how I discharge my duties. My method or my plans—if any of them may be called mine—could be of no possible interest to any one but myself.

Reading.—Judged by a liberal as opposed to a strict interpretation of the programme, I think the reading in the schools of this district is satisfactory. The inevitable local vulgarisms are to be met with, and I see no desire on the part of the teachers to effect an improvement in this respect. Their ears are, naturally enough, deaf to false pronunciation, which, if they have not fostered, they certainly have never energetically discountenanced. To call butter "butther" does not render the sound unintelligible, and so it has a right to pass.

Explanation.—I can report a considerable advance in this all important branch of education. I call it an independent branch rather than a sub-head of reading. In the junior classes there are good reasons for considering them as one subject. But in the higher classes, or in other words, when the mechanical difficulties of reading have been overcome, I think explanation should be regarded, and paid for—and paid for at a high rate—as a distinct subject. Who would pay for the mere reading of a poem, unless appreciated, or at least understood by the reader? It strikes me that in dealing with primary schools we have been too apt to forget the well understood difference between the two meanings of the word "read." To "read" a lesson, and to "read" an author are surely widely different exercises. In the higher classes—certainly in the highest—it is reading in the latter sense that should be paid for.

While on this subject I will add that the aids to explanation lately introduced at the end of the reading books are sure to be of great use. All the intelligent teachers of the district speak in the highest terms of them. They not only give much useful information in a small space, but what I believe of greater advantage—they indicate to the less

Appendix B. skillful teachers the direction in which explanation should run, and the form it should take.

Spelling.—I cannot report any progress in the dictation of senior classes, although the oral spelling of the junior classes has improved. The latter fact affords ground for hope that after a time improvement will also appear in the senior classes. I often ask the teachers to read the dictation exercises, partly to assist me, but chiefly to ascertain how they are in the habit of reading them. In comparatively few cases do they discharge this simple duty judiciously. Sometimes the phrases are too long; sometimes little more than word by word; but the most general fault is too frequent repetition. I can also observe that from want of proper discipline the teacher's attention is distracted. It is unpleasant to see, as I often do, even in schools of more than average general efficiency, such clear signs of slovenly teaching as erasing words into indistinctness at the end of a line, or separating the letters of a syllable.

Pennmanship.—The head-lines are imitated with considerable care and success, and the transcription exercises are generally fairly executed—but the writing is very slow in the senior classes. I believe this arises from what I consider a very injurious practice, which has become almost universal, and that is that teachers have ceased to insist on any uniform method of holding the pen. They assert that a child should be at liberty to hold his pen just in the way he finds most convenient, and they defend the opinion by the "Results" argument—"If the work is done, it matters not about the means." So far as the mere painting of letters goes that may be true enough, but I hold that in writing, as in every other art, the use of the instruments should be systematically taught. Imitation is not everything in writing—reasonable rapidity should be required. With this view, I would suggest that at results examinations the time allowed for the dictation exercises should be limited.

Arithmetic.—Except in the very highest classes, the answering in arithmetic is generally satisfactory. As I understand that new test cards are in preparation, I shall not refer to any changes which I might consider improvements in those which have been in use for the past few years. I shall merely say that I have always thought the cards for sixth class girls much too difficult. How third class teachers, male and female, succeed, even occasionally, in passing pupils through sixth class appears to me something akin to mystery, and why such successful teachers do not rise higher in the scale of classification is almost as unintelligible.

Grammar and Geography.—No noteworthy change in the teaching of these subjects has taken place since I furnished my last report. The proficiency in grammar may be set down as middling; that in geography as fair.

Needlework receives due attention, with proportionate results.

Extra Branches—Geometry and Algebra.—The first year's course is taught with considerable success in several schools; very few pupils reach the second year's course, and scarcely any the course for third year. As there are only six first class male teachers in the district, advanced geometry or algebra could not possibly be generally taught, as it is only teachers so classed who are expected to be able to teach those subjects thoroughly.

Vocal Music is taught with marked success in Trinitarian Convent; very fairly in the two convent schools in Navan, and with tolerable success in one ordinary school.

Drawing is taught fairly in a few schools. The rule requiring teachers to take out certificates of competency to teach this subject has very properly lessened the number of schools in which it is attempted.

Sewing Machine.—I suppose there was good reason for making this an extra branch, but I confess I fail to see it. Ladies skilled in needlework have assured me that it is much easier to teach the use of the sewing machine than the working of a button hole. Why, then, the former performance should get the dignity of an extra branch and the latter not is somewhat puzzling. A child naively told me some time ago that she took a whole week to learn the sewing machine. I fear the children themselves regard as farcical, if not something worse, this pretence that their knowledge of this instrument is the result of a year's teaching. It may be said that the number of extra subjects which can be taught to girls is so limited that it would be unfair to cut off any. I would venture to suggest, as a substitute for the sewing machine, a subject which has been too long neglected, viz., literature as it can be learned from the Board's published volumes of Poetical Selections. Why not make one of Shakspeare's plays, as given in our own books, an extra subject? These books are on our list, but they are never to be seen in the schools. The following extract, from the preface of Vol. I. of these selections, shows that they were intended to be more than ornamental additions to the Board's publications:—

Appendix B.
Reports on the State of Schools.
Mr P. Connellan.

"The Commissioners having decided on a course of study and examination in English literature for their teachers, pupil teachers, and paid monitors, have thought proper to publish for their use the pieces included in the course."

I have the honour to be, gentlemen, your obedient servant,

PETER CONNELLAN.

The Secretaries, Education Office, Dublin.

MR. W. MACMILLEN.

Mr. W. MacMillan

Ballinasloe, March, 1881.

GENTLEMEN.—Since I last made a general report this district has been enlarged, by the transference of fifteen schools from other districts, and five new schools have also been taken into connexion since that time, so that it now contains 130 operative schools, as against 110 in February, 1879. The average attendance for the year was 6,714.

School-houses.—Eight of the mixed schools are held in thatched houses, of which four are little worse than slated houses, being, roomy, properly lighted, provided with wooden floors, and in good repair; the remaining four are unsuitable. The lease of the site for a vested house, to replace one of the worst of these has been executed. About twenty out-offices have been built during the last four years, but there are still thirty schools without any. Important improvements have been made during the past year, in the houses and premises of the Killimore and Kilnadeema schools, and others of less extent elsewhere. But there are houses in very bad repair, with inadequate or quite unsuitable furniture, to which those who ought to make the necessary changes cannot be got to do anything. Where not vested, the Commissioners have no means of compelling repairs to be effected; they can only, when matters are considered intolerable, withdraw the grants. This extreme step is, of course,

Appendix B.
Reports on
the State of
Schools.

Mr. W.
Alcock.

resorted to with great reluctance, as it may not only leave a neighbourhood educationally destitute, but may be disastrous to the blameless teachers. To give the Education Board the necessary control over the state of the houses, and their fittings and furniture, as well as for other weighty reasons, all grants from the public purse should be paid, on certain specified conditions, directly to the local parties maintaining the schools. Of equal importance with the keeping of school-houses in proper repair, is that of warming them. During each of the last three winters I was in many schools that were so cold that successful work on the part of either teachers or pupils was impossible, to say nothing of the risk at which they attended, and the loss to the less heroic who remained at home. Under existing arrangements, the losses accruing from such untoward circumstances fall directly on the teacher, who has seldom the means of removing their causes. My suggestion would remedy this also. A unnecessarily large number of the school-houses are built in very exposed situations. These should be surrounded by plantations, composed largely of evergreen trees and shrubs. This would not only afford protection, but materially improve the appearance of the place. Where a good dry foundation, with proper fall for sewers, &c., can be had in a spot sheltered by adjacent elevations, it should be chosen for the site of a school-house, instead of erecting the building like a watch-tower on the highest peak in the locality. Country air is always pure, but to the ill fed and ill clad it is often dangerously cold. Had space permitted, I should have added some additional remarks on school-houses, and especially on their apartments and surroundings, but I must pass on to speak very briefly of:—

Teachers' Residences.—Of these there are only twenty-eight in the district, affording accommodation to thirty-two teachers. Sixteen of the houses are satisfactory in character, four are indifferent, and eight are quite too small. A grant has been obtained for building a residence at Shannonbridge. The site is, as it ought to be, about a quarter of a mile from the school. Only in towns should the distance between the school and residence be less than this, and if it extended to between half a mile and a mile so much the better. Residences immediately adjoining the school-houses, are very objectionable. No mother could be expected to attend to her business properly in school, with the cries of her own baby ringing in her ears, and even much less potent domestic appeals will often suffice to divert her attention from her professional duties. Moreover the incursions of babies and fowls are to be dreaded, not to speak of pigs and dogs. Neither is such a close proximity, as must necessarily lay his domestic affairs to some extent open to public view, and infringe on the privacy of his house, desirable from the teacher's point of view. A residence should therefore be built on the school plot only, when no other site can be procured, and should then be as completely cut off from the school as possible.

Teachers.—There are 163 teachers at present in this district. Their conduct taking them as a body, has been creditable to themselves and gratifying to every one connected with them. Would that such unqualified terms were applicable to them professionally also, but the energy and skill of many of them fall far short of their steadiness and application. Considering the increase in salaries as we rise through the scale, and the dignity and importance attached to a high class, no one, I think, would have concluded, reasoning *a priori*, that the vast majority of the schoolmasters, thoughtful men, who prize highly the means of maintaining their respectability and independence, would

be willing to remain for life in the lowest ranks of their profession. Yet so they do. During the past eight years only nine masters have sought promotion to higher classes, though I am prepared to recommend at least three times that number, and have tried in vain, to induce several to allow me to put forward their names for the annual examination. The failure of every one of those who faced the ordeal, may partly account for the shyness of some who held back, others were conscious of their inability to rise by examination above their present position, but most have the power, but lack the energy to undergo the necessary preparation.

Appendix.
—
Reports on
the State of
Schools.

Mr. W.
Blackburne.

Probably under no circumstances is the office of teacher, especially in a popular public school, likely to prove attractive to the more robust and active minds. But that the schools here should now be in the hands of men below the average of the people in energy and general force of character, is just what one reflecting on the history of education in this part of the country for the last fifty years would be prepared to find. Not only was the income of the office so low, as to be despised by those conscious of possessing superior capabilities and determined to make the most of them, but the rapidity with which the National schools at first spread over an educational waste created a demand for teachers beyond what there were tolerably qualified candidates to supply, so that it was seldom possible to insist on the very modest minimum of qualifications prescribed; and thus many of the schools were filled by unfit men, whose courage to occupy their false positions, sprang from their profound ignorance of the duties and responsibilities of the office they had assumed. The new schools, however, under influential patronage, were permanent establishments in every neighbourhood, and though for bread they often gave a stone, they claimed to have brought education to every man's door, and seemed to have removed from the road to learning obstacles that hitherto had deterred the weak and tested and strengthened the courage, the enterprise, and the perseverance of every earnest peasant scholar. Now all this was changed; school life became easier and lazier than any other. The more inert, where possible, made the schools asylums from the irksomeness of manual labour to which their sturdier brothers took by choice. Thus these softer natures became the best scholars and ultimately the schoolmasters in their respective neighbourhoods, and such constitute a majority of our present staff of teachers. Neither have we to do with the causes of these in their results only; they are yet producing the same effects, though in a less degree. We are still without the means of adequately preparing teachers, the service is still the *dernier resort* of those despairing of more coveted posts, and to such our preliminary test is still too favourable. And the conditions of professional advancement are ill adapted to attain their end, even under more favourable circumstances than those which now affect their operation. Let an entrance test be applied that will prove those who pass it to possess at least the power to rise by a fair amount of application to the highest rank.

Now, in the dawn of a happier day for the teachers, the nation should be guaranteed in return for its growing liberality, more valuable services. At present we require our postulant to know a little of everything and little of anything, an attainment within the reach of anyone but the veriest dunce; probably, on the mistaken notion that so much as a man knows of any subject, so much of it he can teach. Even one possessed of respectable parts, and not without training in scientific methods, should be appointed only on probation, and should be distinctly

Appendix B.
Reports on
the State of
Schools.

Mr. W.
MacArthur.

informed that his appointment would not be confirmed unless during his year of trial he proved successful as a teacher.

Positive merit as a teacher should be an antecedent condition to all future promotion, and the bookwork required should neither be forbidding in kind, nor so large in amount as to make too great demands on the teacher's time and energy. Our present programme sins against both canons. Teachers are not allowed to indulge their own tastes in studying, while the amount of labour implied in making up all the subjects prescribed is so great that it is never attempted by most, and performed in part, at least, by the few who try it at their pupils' (i.e., at the public) expense. Several of the most energetic and successful teachers in this district (including the recipient of the Carlisle and Blake premiums) persistently decline to seek promotion, saying that their schools make such demands on their energies as to render them unequal to preparing for an examination. So we lose the advantage of that wholesome and invigorating activity which preserves in the mind something of the tone, freshness, and plasticity of youth, and keeps alive that sympathy with the learner so essential to success. But though I should like to see among our teachers more working power, higher aspirations, and more attention to mental culture, it must not be inferred that I think the more ambitious the man the better the schoolmaster; far otherwise. If, as I take it, education should tend to make the people contented, and to that end furnish them with a source of happiness in themselves, nothing could be more desirable than that they should have while young as their preceptor and model a happy and contented man, who takes a philosophical view of life.

Monitors.—With a view to improve as quickly as possible the methods pursued in the schools more attention should be paid to the training of monitors. These young persons are made to read from a book how they ought to teach. This information they generally fail to reproduce at their examination; but even when they do carry the plans of the author in their heads, they carry those of their master into practice in schools. Such as is the master such is the monitor, is really universally true. Instead of being taught what they ought to do while they see altogether different plans followed, they should be constantly trained in the practice of the plans recommended in their handbook. To see that this was done, and to encourage and assist in the doing of it there should be annual examinations of monitors held at sub-centres, on summer Saturdays, confined to methods (with actual class practice), and a few other subjects treated from a professional point of view. I would not only invite the neighbouring teachers to these examinations, but to take part therein. The fee for training to depend on this examination.

For the sake of simplicity I would recommend to have only one class of monitors appointed once a year at twelve to fourteen years of age, to serve for three, four, or five years according to circumstances. Should the exigencies of a school require the filling up of a place before the annual day of appointment, the candidate selected for the place could be paid at the rate for first year till the annual day from which the appointment would date.

Reading.—I can report only a little improvement in reading. I am nearly as far from being satisfied with the results attained in it as in any other branch. Not that I look for fine reading, but that I like to meet with intelligent reading. Indeed I consider reading, in every stage of the school course, where the words are mere sounds without sense as nearly worthless as any attainment possibly could be. So acquired it

can serve neither as a means of improvement nor of intellectual enjoyment. There should, I think, be no pass given for reading, however verbally accurate, if there appeared to be no ideas attached to the words uttered. The practice of reading without thinking is not merely barren of good, but has positively bad results, as the mind becomes, as it were, paralysed, and eventually almost incapable of performing the functions which, had it been developed under more favourable training, would have afforded in their exercise the highest gratification.

Spelling.—In this branch the failures are still numerous.

The dictation lesson is very seldom prepared by the pupils as it should be. The lesson is, moreover, badly conducted in several respects. The passages are badly selected, the clauses are repeated too often (in some schools as often as the pupils wish), copying is not prevented, too much pains is taken with the penmanship, and finally the correcting is neglected, or done hurriedly and ineffectually. In selecting passages for third or even fourth class long unusual words should rather be avoided, and the pupils exercised in the distinction between 'the' and 'they,' 'their' and 'there,' 'tail' and 'tale,' changes of 'y' into 'i,' and other difficulties likely to be encountered in writing the simplest note. If passages were selected containing such words, prepared beforehand, properly dictated, and above all the attention of the pupils held on the errors by proper questioning and rewriting in correcting the exercise, everyone but a dunce would be able to write an ordinary letter in his own words with correct spelling on leaving fourth class. This is of course only an extension of the only method of teaching spelling, namely, through the eye, which is mainly done in connexion with reading.

Arithmetic.—The failures in arithmetic continue to be numerous from fourth class upwards. This arises largely from a false system of teaching, namely, giving a rule by which to work examples instead of first finding the rule by the working of examples, detaching that from the knowledge already acquired that might have been drawn out of it, proceeding from the general to the particular, instead of from the particular to the general. I am sorry I cannot approve of the form in which the sums are presented on all the fourth class cards. The teaching has a tendency to accommodate itself to the examination, and pupils taught with a view to merely passing on the fourth class cards now in use must proceed rapidly to be equal to the fifth cards at the end of the year. Several of the sixth class cards, especially those of the second year, are too difficult.

Grammar.—This subject continues in the same backward state as heretofore. For this the teachers are not alone to blame; the subject is intrinsically difficult; we begin to teach it at the wrong end, and the text-book mostly used is badly arranged. And in the case of this as of most other subjects, the teachers place all their dependence on books. This trusting to books is a fatal source of disappointment; setting and hearing tasks is the chief, almost the only resource, of teachers, who cannot teach. I should like to see the use of all books—except reading books—forbidden in the schools for some time; their exclusion would be found surprisingly favourable to progress, and the growth of intelligence. It is the least evil of the excessive amount of home lessons now prescribed, that they defeat their own end—children employed on task work, seldom interesting and often unintelligible—nearly all the time between the dismissal and meeting of their school, return next morning in the most unfavourable state for learning possible, and consequently the best efforts of their teachers produce most inade-

Mr. W.
MacMillen.

quate results, to say nothing of the bad mental habits fostered by the system, and the danger to the pupil's health. Not more "home-work" than can be well done in an hour, should be set for any child under thirteen years of age. After long supporting the retention of grammar in the Programme for third class, I have become favourable to its exclusion, as the time devoted to it in most schools, is worse than wasted. A little more arithmetic might be required instead.

Geography.—The failures in geography are very numerous, and, contrary to what holds in grammar, they increase as we rise through the classes. This appears to me inexcusable; the subject is naturally interesting and not so difficult, but that the portions prescribed could be readily taught in less time than is allowed. But, as in grammar we begin at the wrong place, and build on a bad foundation. The early knowledge is not based on clear conceptions, drawn from observations, but on verbal definitions, and the whole subsequent course is a mass of undigested facts, with sequence and connexion, slowly and imperfectly acquired, without educational, and almost without practical value. When, in the absence of the map, I ask a third class boy to point to the north, he generally contents himself by staring at me, as if he would like to remind me that I was forgetting myself. I vary the question by saying "point to the north of the room." In a majority of the cases in which I drew a response, the ceiling is pointed to. And, after remarking that it was just noon, and that the sun was shining, I have frequently failed to get a single child in either third or fourth class, that could show me how to find the south. Yet these children, and their teachers, thought they knew what was meant by the north, &c., of the map. The geography for third class should be that of the neighbourhood of the school, in all its features; and to enable this to be taught, or more correctly to convey a clear notion of a map, and to exemplify and illustrate the terms used in connexion with the subject, all the baronial maps of the county, on the largest scale published, should be placed on the list of requisites. This would not entail much cost, and there would be a considerable sale for these maps. Having thus laid a solid sensible foundation, it is of less importance in what order we proceed with the remaining parts of our course.

I have the honour to be, gentlemen, your obedient servant,

W. MACMILLEN.

The Secretaries, Education Office, Dublin.

Mr. W.
O'B.
Newell.

MR. W. O'B. NEWELL, M.A.

Dublin, 28th February, 1881.

GENTLEMEN,—I have the honour to submit, for the information of the Commissioners, my general report on the district under my charge.

When the limits of the school districts of Ireland were modified, in the spring of 1879, this district was extended in area in the directions of Dunlavin and Enniskerry, and the Inchicore Model Schools, and a large convent school in the city of Dublin were also transferred to it. I took

charge on the 1st of May, 1879. I have now under my care 99
 ordinary day schools, a Model school with three departments, two evening
 schools, and one Poor Law Union school.

This district comprehends the greater portion of the city and suburbs
 of Dublin, lying on the south side of the Liffey—the south-western part
 of the county Dublin, the north-east of Kildare, and the valleys of
 Wicklow, which supply the head waters of the Liffey, Slaney, and Bray
 rivers.

The parents of the children attending the schools in the city, suburbs,
 and small towns are generally artisans, shopkeepers, cardrivers, or
 labourers. The rural schools are attended by the children of farmers,
 agricultural labourers, and herdsmen. The attendance in some of the
 rural schools near the Dublin mountains is composed to a considerable
 extent of children boarded out at the different farmhouses by the
 Guardians of the South Dublin Union, or by the conductors of charitable
 societies. Half the children attending Mr. Cobbe's schools in Glansmiff
 belong to this class. No doubt their sojourn in the country is very
 beneficial to them.

The schools are judiciously distributed, and are sufficient in number for
 the wants of the population. In the city of Dublin a considerable number
 of boys requiring elementary education do not attend the National schools,
 out go to those of the Christian Brothers, or to Protestant schools not con-
 nected with the Board; the girls are, however, almost entirely educated
 at schools under my inspection. In the portions of this district outside
 the city elementary instruction may be regarded as entirely confined to
 the National schools. I believe that in point of proficiency this district,
 taken as a whole, would not contrast favourably with many of those in
 other parts of Ireland. In the city the children attend school with
 extreme irregularity.

When passing from one school to another in the middle of the day, I am
 often surprised at the number of boys and girls to be seen playing in the
 streets and alleys. From seldom observing, as I pass by, any involuntary
 sign of recognition on the part of these children, and from not overhearing
 any such whisper to a companion as "there's our Inspector," I am in-
 clined to believe that many of them may be regarded as not attending
 school at all. Home influence in Dublin is also frequently unfavourable.

The large tenement houses in the Liberties and other old parts of the
 city—the mansions of the noble and of the merchant in the time of Swift
 —in which many of the poorer citizens are forced to dwell, are not con-
 structed to be the abodes of health, morality, or evening study.

No doubt the excellent houses which the Artisans' Dwellings Company,
 Mr. Guinness, and other large employers of labour are gradually building,
 will tend to improve the home influence brought to bear on the
 children.

In several of the city schools the average daily attendance sometimes
 falls as low as from 35 to 40 per cent. of the number of pupils on rolls.
 Having had the oldest portion of the north side of the city in my former
 district, I am now acquainted with the educational condition of the
 poorest stratum of the population—the class which it is most urgently
 necessary to discipline and educate. It is my conviction that this class
 will never be thoroughly reached until regular attendance at schools,
 certified as efficient, is made compulsory on all children up to twelve or
 thirteen years of age. Probably in no city in the United Kingdom is
 so large a proportion of the population comparatively illiterate, and
 living in comfortless homes as in Dublin. Consequently no city is

Appendix

 the State of
 Schools.

Mr. H.
 O'D.
 Newell.

Appendix B.
Reports on
the State of
Schools.

Lt. W.
G.B.
Newell

likely to derive more advantage from having the rising generation educated and trained to the habits of neatness, order, and self-restraint, which are to be acquired in a well-conducted elementary school.

It is true that the clergy of all denominations are anxious that the children under their care should attend school regularly, and frequently exhort the parents to send them. Still, owing to the parents' innate carelessness, these exhortations are attended with very moderate, and usually only temporary success. There is ample accommodation in Dublin, either in schools connected with the Board or in those which are not, so that compulsory attendance could not, I think, be regarded as imposing hardship on any denomination.

In the rural schools, too, I cannot speak of the attendance as being sufficiently regular, but it is far more regular than in the city. In the country the clergy can cope more successfully with irregular attendants by house to house visitations, and are not baffled by numbers and the intricacy of courts and alleys.

It must also be said that in the case of rural schools absenteeism cannot so often be traced to sheer carelessness. Small farmers and cottiers would suffer serious loss, if, at certain seasons of the year, they were not allowed to use their children's labour; and the fact, that early training in practical agriculture is profitable to the children themselves, should not be lost sight of. In Kildare, in Wicklow, and in portions of the county Dublin, the children have often to come several miles to school from "lonely dwellings far apart." On mornings when the weather is severe, a mother may perhaps be excused for thinking her children better at home by the fireside than on the bleak road to a distant school.

Schoolhouses, &c.—This district embraces about forty really good school-houses, well fitted up in all particulars. No doubt few of these would bear comparison with the buildings recently erected in England by the School Boards; they are, however, sufficiently suitable not to allow the teachers any excuse for want of progress on the part of their pupils. I regard forty-three of the houses as fairly comfortable, though defective in some respects. Whilst there are twenty schools where defects in either the houses or in the fittings are serious obstacles to successful instruction. About sixteen of the houses were not built originally for schools. Most of these are unsuitable.

It is my practice to lay great stress on the houses being kept in thoroughly sound repair, for many of the buildings are not sufficiently substantial to withstand the action of the weather, unless looked after constantly. I must say that, though the cost usually comes to a certain extent out of their own pockets, the managers, with four or five exceptions, show much alacrity in adopting suggestions about repairs.

I may mention the St. Peter's schools, and those in the parish of Dunlavin as having been recently very much improved by their managers.

The desks in several schools are old, and of a primitive construction. Those used, up to the present year, in a school in the Glen of Insell, were once the soldiers' mess tables in the adjacent barrack, which was built about ninety-eight, and long since abandoned. These tables were improved into desks by nailing on the top two boards with a steep slope.

During the past year two new houses have been built, and one school transferred to a better house. There are now only two schools in this district which have earthen floors, and only two with thatched roofs.

The number of vested schools is small; there are five vested in the Commissioners, six in local trustees, and three held by bond.

As to the warmth of the rooms in winter, I cannot say that many of them would stand the test of a pupil being able to remain in any part of them for half an hour at a time without feeling cold. Too often the doors, windows, and fireplaces have been fixed without regard to the laws that regulate currents of air.

The playgrounds very frequently require draining and gravelling, flagging, or asphaltting to prevent pupils carrying mud on their boots into the school-rooms. In the city, as is only to be expected, the playgrounds are generally too small. However, by watching the opportunity afforded by adjacent yards or old buildings becoming vacant, some managers have been able to give their schools a larger lung. As an instance, I may mention the excellent asphalted playground provided by Canon Walshe for the four SS. Michael's and John's schools.

Shelter-sheds in which the children could take a little exercise on extremely wet days, whilst the windows of the school-rooms are down for ventilation, are absent from most playgrounds.

I have also to regret the absence of porches from a considerable number of school-houses. A porch adds greatly to the warmth of a room, and conduces to the maintenance of order by affording a suitable place for hanging hats and muffling. I believe a porch well fitted with racks is often the means of preventing the spread of infectious diseases by allowing caps and cloaks to be kept separate instead of being flung promiscuously into a box, or being stuffed under a gallery.

Out of the 46 schools which are either rural, or situated in small villages, 29 have either residences or apartments for the use of the teachers.

Managers.—The schools are under the control of 45 managers; of these 20 are Roman Catholic clergymen, 2 are monks, 6 are Church of Ireland clergymen, 1 is a Wesleyan, and 1 a Presbyterian clergyman, 10 are nuns, and 5 are lay persons, 4 of the latter belonging to the Church of Ireland, and 1 being a Roman Catholic. Most of these managers do their best to induce the children to attend school, visit frequently, and give the kindest attention to my suggestions. The number of schools under the direction of each manager varies from 1 to 9.

Teachers.—The conduct of the teachers in this district has been very good. I find that the National teacher is generally respected by his neighbours.

Four male principal teachers are in first class, 16 in second, and 17 in third class; of the female principals, 6 are in first class, 28 in second, and 21 in third class; whilst 3 male assistants rank in second class, and 10 in third; 11 female assistants hold second class, and 35 third class certificates. These figures give 10 to first class, 58 to second, and 83 to third for both males and females, principals and assistants.

The teachers of the *Inchicore* Model schools are not included in these numbers. They are all trained and highly classed.

Very few male teachers sought promotion at the last annual examination, and those who did were most unsuccessful. Want of sound early training in mathematics is generally the cause of failure in the case of those seeking both first and second class, whilst candidates for first class seem to find the difficulty of obtaining instruction in Natural Philosophy—a hard subject to make up even from the best modern text-books without attendance at lectures—a further obstacle to success.

At the annual examination of 1880, the female teachers were fairly successful in obtaining promotion, though the number I could induce to come forward was small. It is a source of much regret to me, that the

Nesroll.

younger members of the staff of teachers engaged in this district, do not appreciate fully the advantages of improving their classification. There is but little excuse for a young man or woman, whose work only begins at half-past nine or ten and is over at three or four o'clock, and who usually has Saturday as an off-day, not spending a few hours every evening in study.

Many a teacher now passes on the programme for third class, and is content to remain in that class for the rest of his life. He may never have received any training in school-management, and may never see the working of more than one National school—his own. Now many of these third class teachers possess excellent natural abilities. If they were compelled at intervals to attend lectures on methods of teaching, and to come up for periodic examinations, I have no doubt the efficiency of their schools would be vastly improved, and that many of them would rise to higher grades of classification. But unless put under pressure, they will be content to remain in third class. No doubt much of the apathy shown by assistants, once they have obtained third class, is due to the fact that an improvement in their classification is not followed by any increment to their salaries. Now in large schools it is necessary, that the assistants should be able to aid in the instruction of the senior pupils, yet how can an assistant who only ranks in third class, be expected to teach a sixth class pupil with effect? To do so, with success, his knowledge should be much further in advance of that of the pupil than the difference between the programmes for each would imply. If the former rule by which class-salary up to second was allowed to the first assistant in a school, where two or more were employed, was reverted to, the efficiency of many schools would, I believe, be increased, and many young men who are now looking for Civil Service appointments, would be content to remain as teachers; whilst both male and female assistants would have an incentive to study.

When a boys' school is vacant, some difficulty is experienced in supplying a male teacher, even of the lowest class, who has been educated in this district. But abundance of female candidates, who have been trained in neighbouring schools, offer themselves for every vacancy. I think the supply to be obtained would warrant the standard of examination for female teachers being raised.

Possibly the test for admission to the service might also with advantage be made more severe in the case of males; as, though in this part of Ireland male candidates may not be abundant, there are in the south and west large classes of well grown lads attending school, who possess good intellect, and are soundly grounded in elementary mathematics. Many of these would willingly accept a school, and would, after some training, make excellent teachers.

A large number of the teachers in this district labour under the disadvantage of never having been trained in any normal establishment. Only twenty-five males and twenty-seven females, out of the 50 male and 101 female teachers engaged in the schools, hold certificates of training, and of these only sixteen males and twelve females have been trained during the past seventeen years. However, a considerable number of the female teachers working in the schools in or near the city, have gone through a course of mentorship in either Baginbun-street or King's Inn-street convent schools, which are evidently presided over by ladies who possess great natural gifts for organization. Hence these girls generally start with a fair knowledge of methods of teaching. Neither of the large schools just referred to is in this district.

Monitors.—There are 27 male and 136 female paid monitors in the schools under my charge. Of the males, one is first class, 19 are second, and 7 third class; there is one female in first class, 95 are second class, and 30 third class monitors. The male monitors rarely remain more than a year or so; the females are generally anxious to go on to be teachers. In order to see that monitors receive sufficient instruction I request that a time-table, showing how each ought to be engaged at any time during the day, be hung up in the schoolroom. This enables me at incidental visits to test whether a teacher is doing justice to his monitors or not. However, I fear that in spite of all my precautions many monitors are neglected and kept too long instructing classes. My colleague, Mr. Stronge, of Ennis, having recently shown me the exercises worked at the monthly examinations of monitors which the teachers in that district held, I have begun to ask the staff of this district to submit the monitors appointed in their schools to similar tests and to forward the papers for my perusal when corrected.

A large number of monitors failed at their final examination in 1880—a fact that did not surprise me, as I was aware how little most of them knew. Indeed the monitorial staff of this district is an extremely unpromising one, and I anticipate that time will be required to improve it. It is my opinion that monitors should be instructed in methods of teaching from the outset of their career, and that male monitors should also begin to learn algebra and Euclid from the date of their appointment. Neglect of the first subject militates against their success as teachers, whilst if mathematics are deferred until the last year, a boy's failure is almost certain. The largest number of monitors in any one school of this district is in Weaver's-square convent school, where there are twenty-three; from sixteen to eighteen are also usually employed in Townsend-street convent school. It is my practice to suggest to teachers that no second class monitor, who can be spared without serious inconvenience, should be asked to instruct classes for more than about two hours daily. To act as a teacher for a longer period is too exhausting for a child who has also the studies of a pupil to pursue for three or four hours, and who has then to prepare lessons at home.

Discipline, &c.—The maintenance of healthy discipline in its various phases I look on as perhaps of more importance than the communication of elementary knowledge. There are a large number of schools with whose discipline I am not satisfied. Having gone over the list of the 105 schools in the district, I would say that discipline in its several aspects is fair or good in about sixty. When examining for results' fees an inspector does not allow anything additional for excellence in discipline, but there is no doubt that the teacher who has his school thoroughly in hand will reap a rich reward owing to the increased efficiency which a good system of organization gave to his teaching during the year. Want of punctuality is a fault that is very rife. The best way to cure it seems to be that the teachers should themselves set good examples of punctuality and should see that the rooms are dusted and warmed early in the mornings so as to be inviting. Want of personal neatness is another very prevalent fault, especially in the city schools. In order to correct this, a general parade every morning before roll-call, and a careful inspection of hands, hair, faces, dress, and of such accoutrements as satchels, books, pencils, &c., and the giving of marks for attention to these matters, are very useful remedies. I have often had to notice that changes from desks to floor, the distribution of the materials for a lesson in writing or in needlework, and the dismissal of the pupils were clumsily performed, and too much time wasted on

Appendix B.

them. The manner in which these details of organization are carried out in the convent schools is in general exceptionally good. Singing or a little instrumental music when "changes" are going on seems to improve the tone of a school.

I think it very important that teachers should exercise a friendly supervision over the children in the playground, and try to give their games an interesting direction. High spirits should not be checked, but pupils need not be allowed to rush about in a disorderly, struggling mob, and should be formed into line when about to leave or return to the schoolroom. Time does not permit of play lasting for more than twenty or thirty minutes. This is too short to allow of boys engaging in cricket, hurley, football, &c. However, it is my impression that teachers would do well to encourage the formation amongst their pupils of clubs for the pursuit of these fine games on Saturdays and holidays. Games that can be taken up or left off at a moment's notice and which cause a brisk circulation of the blood of all the players are the most suited for a short outing. Those that chiefly consist of running would answer this purpose best. The safest gymnastic appliance to introduce into a boys' playground seems to be the vaulting-horse. The Board of Works have at Inchicore Model School set up two of different heights to suit the junior and the senior boys. These seem to be very popular and to afford good exercise for both arms and legs. Fly-poles and horizontal bars are excellent apparatus, but they are often the sources of accidents, as too many boys often cling to them at once. Light gymnastics are practised in girls' schools in Germany and other parts of the Continent. But it is hard to select any gymnastic apparatus that would be deemed in this country suitable for the playground of a girls' school. Wooden dumb-bells and light clubs might be useful, but they are not attractive, and children resent being forced to go through any exercise in which they do not take an interest. Medical men question the healthfulness of the skipping rope and the swing. Dancing in what Horriok would call a "round" is perhaps the most healthy and the most pleasing looking exercise for girls, and is especially attractive when accompanied by the singing of some quaint rhymes. A few minutes of drill when about to return from the playground to the schoolroom would be beneficial for both boys and girls. But it is now time to proceed to speak of the intellectual condition of the schools—on which the discipline maintained in the playground, as well as in the schoolroom, exerts no unimportant influence.

Proficiency of Schools.—With regard to the present state of the proficiency of the boys', mixed, and girls' schools of this district, I would classify thirteen as remarkably good, thirty-two as doing fair work, thirty-eight as inferior, but making a little progress, and sixteen as hopelessly bad, and likely to remain so whilst in charge of the present teachers. From the foregoing list I have excluded the Inchicore Model Schools, two evening schools, and one poor law union school with two departments.

The first named schools are working successfully, one of the evening schools is efficient, the other inferior, whilst the Nans poor law union schools are well conducted.

Several of the schools are either taught by nuns or under their supervision. The Sisters of Mercy teach two large schools in the city, which have generally about 2,700 pupils on the rolls between them, and also instruct a school in the town of Nans; two schools are taught by nuns of the Presentation Order; the Lorette and Carmelite nuns have one school each, which they themselves instruct; the Sacred Heart nuns superintend

two schools, which are taught by lay teachers, and the Sisters of Charity, the Carmelite nuns, and those of St. Clare also conduct one school each in a similar manner.

There is one school partly taught by monks and partly by lay teachers.

Ten schools are purely infants' schools, and eight others have a separate department for infants attached.

In many of these infants' schools, I found little taught, save the elements of reading and a few well-worn songs. To this class of school I have given my best attention. Such teachers as did not do so before, now study infants' school manuals; the children have learnt a number of new melodies and movement songs, and receive, from prepared notes, lessons on the manufacture and uses of the objects—such as silk, cork, iron, coffee, &c.—which are attached to the cards hung round the room or contained in the cabinets of specimens; interesting questions are also put and stories told about the large bright coloured pictures of animals, which surround the walls; whilst as the Board's Programme very properly does not permit the kindergarten system to usurp all the time of an infants' school, even the youngest children are taught the elements of reading, writing, and figures.

It now remains to say a few words regarding the several subjects of instruction specified on the Results Programme. One naturally begins with reading.

Reading.—In the junior classes, the words are fairly mastered, but the grouping and attention to stops are sometimes faulty. Errors in accent commonly arise from placing the stress too near the end of the word, and in tone from a tendency to drawl. At my secondary inspections, by transferring to a black-board in a plain round hand portions of the lessons of their books, I occasionally test the facility which the younger children have gained for reading writing.

Expressive reading, as I had also to remark in my report of 1876, even in the senior classes, continues to be rare. Teachers do not take the pains to make themselves good readers, and do not read passages for their pupils to imitate. Let any person of education and taste, who is not accustomed to read much aloud, take a piece of poetry or prose, with which he is not well acquainted, and try to read it as if for a critical audience; he will, I believe, be surprised how badly he does what seemed an easy task. To read the piece to his own satisfaction, he will, doubtless, find it necessary to master thoroughly the drift of the whole extract and the meaning of every allusion in it, and to practise it over and over again for days. How then can a young pupil expect to read the fifth or sixth book with expression, unless he has been made go through a similar process, and has a good example to imitate?

I am far from attributing backwardness in reading to the reading books in use, as is sometimes done. I have studied the best of the series adopted in England and Scotland, and it is my impression that the Board's reading books, in the hands of a skilful teacher, are superior to any of them. It seems to me that reading books should be above all literary, and interlarded as little as possible with scraps of physiology or of popular physics, which have neither beginning nor end, and which serve only to confuse a child's mind.

The Board's series of reading books is compiled from the best writers of English verse or prose, who have flourished from the time of Shakspeare. Undoubtedly a pupil who has gone through such a range of authors, ought to have acquired a large vocabulary, and should possess a fair acquaintance with the best idiom. This is the end which

Newell.

Appendix B.
Reports on
the State of
Schools.

Mr. W.
O'B.
Nevill.

should, I think, be aimed at in a series of reading books. The only lessons in the series which I would willingly see excised are those in the fifth book relating to Scripture history. The style of these extracts abounds in a *pseudo-classicism*, and bristles with sins against clearness and simplicity. It must be allowed, too, that the illustrations, which if clear and artistic might be a source of both pleasure and instruction, are very few, and as a rule, very inferior. New woodcuts are certainly much needed.

In order to test if the meaning of the pieces of poetry committed to memory for recitation is understood, I often ask pupils to write out a verse, whilst the books are closed. The result is not unfrequently disappointing, though often amusing. I find that the senior pupils are prone to select the shortest pieces of poetry for repetition—some of them mere scraps.

It, therefore, occurs to me that, as in England, a certain number of lines should be substituted for the six pieces which the Programme now allows pupils to select. In my report for 1876 I alluded to the improvement that might be effected in reading and in explanation by introducing the study of some English literature into the teachers' course of examination, as well as by establishing school-libraries. Doubtless these steps would be attended with difficulties, yet with difficulties which, I hope, may ultimately be overcome. I think some marks might with advantage be allowed to candidate teachers, and to those seeking promotion, in case they had taken the pains to make themselves really good readers and reciters; but I would allow none for mediocrity.

Spelling.—The first class spelled very fairly; the second class indifferently; and the other classes wrote from dictation poorly enough. I recommend the use of the black-board for the correction of errors.

Some teachers with very good effect still make their pupils learn tasks from Sullivan's spelling book. I would hail with pleasure the re-introduction of it, or some similar book, into the Programme. It seems useful to have the many puzzles of English orthography in a convenient form.

Writing.—When coming to this district, I brought with me specimens of the best copies and school-exercises executed in the schools of my former district, where the teachers were most successful in producing good penmanship. Several of my colleagues were also so kind as to supply me with examples of the good writing in their schools. I distributed these copies in my new schools in order to show what standard was fairly attainable in each class. The teachers' attention was also drawn to the methods for securing careful writing mentioned in my report for 1876. The greater number of teachers have worked loyally to improve their pupils' proficiency in this subject, and I believe their efforts have been attended with much success.

Mr. Vere Foster's copies are chiefly used. I have also seen in my schools the excellent series recently published by Alex. Thom & Co.

Arithmetic.—Some progress in arithmetic is to be noticed in the junior classes. In the instruction of the senior classes there appears to be a tendency to depend over-much on constant poring over test-cards, which are framed, so as to be almost identical with those issued by the Education Office, and to neglect the inculcation of general principles. In some weak schools I find that pupils are promoted from class to class, year after year, without passing in arithmetic. It seems to me desirable that teachers should be deprived of the power of promoting a pupil who has failed in arithmetic two years in succession.

Grammar.—Answering in grammar was not satisfactory. Too much time seems to be wasted in trying to get just such hard words as *etymology*, *polysyllable*, *triphthang*, these bugbears to a child's mind which loom in the threshold of most text books.

Pupils are not set sufficiently soon to break up or to compose sentences—the essence of grammar—and an easy task in a language so little inflected as the English.

Geography.—In geography progress is feeble. I have suggested to teachers of infants' schools that, in order to make the subject interesting, they should paste little pictures of Niggers, Chinese, Red Indians, Hons, camels, fish, ships, trees, pyramids, &c., on the parts of the map of the world where such might appropriately be found, and tell the children something entertaining about them. I recommend that the more advanced pupils be led on in a somewhat similar manner, by entertaining oral remarks to take an interest in the subject. To most children in the upper and middle ranks of life many countries, rivers, and towns are connected with some event in history or fiction, but it is not so with the greater number of children attending National schools; to them the acquisition of geographical names is a dreary task, not lighted up by any ray of association. My colleague, Mr. Purser, says, in his report for 1879, that he doubts if he would allow any but blank maps in a school; for my part I would wish to see hung next every lettered map a similar blank one of the same country. During a lesson the lettered one should be faced to the wall, until either pupil or teacher was at fault about some place on the blank one. I anticipate that Johnston's halfpenny test-maps, recently placed on the Board's list of requisites, will prove very useful to the senior class. What I recommend is, that each map be filled at least twice, the pupil being allowed to use an atlas the first time when in doubt, the next time the names being entered from memory.

Agriculture.—Pupils answered only indifferently in agriculture, still I did not mark severely, as I consider that much is gained even by having attention drawn to the subject in rural schools. It is very possible that in after life pupils may revert with more profit to agricultural manuals when they begin to have some practical experience in farming.

As the making of butter and dairy management play a leading part in the industries of Ireland, it might perhaps be well to offer in rural schools a small fee for girls in the fifth class, who may be acquainted with the chapters of the *Introduction to Practical Farming*, which relate to the cow. I find this work a much better text-book than the *Agricultural Class Book*.

Bookkeeping.—A fair knowledge of bookkeeping has been acquired in several schools. I was lenient in passing such pupils as exhibited a neatly worked series of exercises and could answer fairly on them. To the second stage of fifth class, I usually dictated the waste-book entries for a goods' account, and gave the sixth class in addition a few miscellaneous questions of a harder nature.

Girls' Reading Book.—I have encouraged the study of the *Girls' Reading Book*, and am glad to be able to state, as my experience, that the answering on the theory of cookery and other household duties was generally intelligent. There are, I am sorry to say, no classes for practical cookery in connexion with any school in this district.

Vocal Music.—The children in this district, especially in the city, are extremely musical. Singing is taught in a large number of schools, and

Appendix B.

Reports on the State of Schools.

Mr. W. G. B. Newell.

Appendix B.
Reports on
the State of
Schools.

Mr. W.
O'B.
Newell.

generally with success. I am glad to say attention is also given to reading easy pieces in time. Some of the teachers, who are persons of great musical taste, have been so good as to furnish me with lists of songs suitable for each class, so that, when necessary, I am able to recommend new ones, which the children will take an interest in learning.

Geometry and Algebra.—But little progress has been made in either geometry or algebra. In this district most boys leave school before they come to an age when they could be expected to master the courses prescribed in these subjects.

Other Extra Branches.—French and drawing are taught in a few schools; instruction in the former was attended with fair success, but good results were only obtained in one school in the latter. The other subjects of the extra branch programme were so seldom taken up that it is unnecessary to speak of them.

Needlework.—I find needlework fairly taught. I endeavour to give it a practical turn by calling the children's attention to any slight defects that may exist in their bibs or dresses.

School Accounts.—The account books were generally neatly kept. Of the 271 incidental visits which I paid during the year, I invariably examined the account books, and, when my visit occurred after eleven o'clock, I most frequently called the rolls. It gives me much pleasure to be able to state that I seldom observed serious errors in the record of attendance. Teachers who make it a rule to spend an hour or so at their account books on every Saturday do not, I believe, find them troublesome. It seems to me very desirable that as few changes as possible should be made in the form of the account books, or in that of the documents to be prepared for a results examination. All are in the main suitable.

School Fees.—Pupils, as a rule, do not pay as large school fees as might reasonably be expected, nor do they pay the amount at which they are rated with regularity. I think it will be found that the school fees have fallen off somewhat during the last year or so.

Requisites.—There is little to be complained of as to the supply of school requisites which the teachers of this district keep on hand for sale to their pupils.

I am, Gentlemen, your obedient servant,

W. O'B. NEWELL, District Inspector.

The Secretaries, Education Office, Dublin.

Mr. F. EARDLEY.

Templemore, 12th February, 1881.

GENTLEMEN,—In accordance with the instructions contained in your letter of the 15th December, I beg to submit for the information of the Commissioners this my General Report for the year 1880.

Since the last General Report, two years ago, the area of the District has undergone some modifications. Eleven schools were transferred to the Parsonstown and Portarlington centres of inspection, and twelve schools were added in the neighbourhood of the coal mining district of Ballingarry, so that the educational District of Thurles now extends in a north-easterly direction from near the village of Mullinahone for a distance of thirty-five miles, and from near Rathdowney, in the Queen's county, along the direction of the Great Southern and Western Railway for nearly the same distance. The middle of the area thus indicated is occupied irregularly by the Bog of Allen, no less than 48 schools out of the entire 117 being situated on the very edge of the bog or distant from it not more than half a mile. The district is traversed on its south-eastern and north-western directions by the Slieveadagh and Sliev-Bloom ranges of hills respectively, and the sub-divisions of the country thus made indicate pretty accurately the occupations of the inhabitants.

Immediately around the bog, tillage and turf-making are the staple employments, in the celliery district there is a considerable mining population in addition, while in the north-west portion cattle farming may be substituted for the coal mining of the south-east. The urban portion of the population is not considerable, the only towns of any note being Thurles and Templemore. The other centres of population, such as Rathdowney, Killenault, and Borrisoleigh, are not sufficiently large to impress upon the attendance of pupils a character other than rural. The distress of last winter and spring pressed most severely on the people living near the bog, and were it not that arrangements were humanely made to supply the children attending schools so situated with a daily breakfast, there would have been a marked decrease. As it was, the expectation of this breakfast brought numbers daily to school who without this attraction would have been idling at home. I was assured that in some instances this was almost the only food the children received in the twenty-four hours.

It deserves to be placed on record that Mrs. Power Lalor, of Long-orchard, Templemoahy, undertook the onerous task of distributing the supplies placed for this purpose in her hands by the Trustees of the "New York Herald" Fund, and to that lady the thanks of the community are due for the zeal, care and tact she displayed in a trying period.

As only 62 pupils in every 100 on the rolls attend school a sufficiently long time to qualify for presentation at the results examination, most of the teachers and many of the managers are anxious to have some scheme of compulsory attendance introduced, so far as to secure at least that each child of the school-going age should be present 100 days in the results year. No doubt such a measure would be extremely desirable as it is disheartening to see on what frivolous pretences many parents keep their children at home, and in the towns and villages as one goes through he will always find a considerable number loitering about, ready for mischief and receiving that training, one of the worst of all, incapacity for serious or settled application. But to whom would the

Appendix B.

Reports on
the State of
Schools.Mr. F.
Eardley.

Appendix B.
 Report on
 the State of
 Schools.

Mr. F.
 Eardley.

enforcement of such a compulsory law be entrusted? The consideration of this delicate point leads one to the conclusion that for the present a change would be impracticable.

School-houses.—There are only three really bad school-houses in the district. In two of these cases application has already been made for aid to build, and I have little doubt that in a short time good vested houses will be provided. In the third, there is a prospect that a good house, now almost disused, will be secured, so that there is not much reason to complain in this district of unsuitability of accommodation for the pupils. As to the question of residences for the teachers, it may be said that the inducements held out by Parliament for their erection have been no more than nibbled at. One has been built at Castlefleming, another is in course of erection at Clonantagh, and this is all that has been actually done. Application was made to build at Borrisofarney, but the project is not likely to be realized, at least for some time, owing to a difficulty regarding the necessary lease, and the manager of the Moynes schools expressed his intention of availing himself of the provisions of the Act in the course of the present year. From the well-known zeal and energy of this gentleman, Rev. William Power, R.P., Templetoohy, I have little doubt he will carry out his design to a successful issue. Only twenty teachers in the district have free residences, and in ten instances the teachers reside a distance of three miles or more from their schools. In severe weather these teachers either do not attend at all or arrive with their energies so impaired that a satisfactory day's work is not discharged.

Managers.—The interest taken in their schools by the managers I have never seen surpassed in any other district. They visit constantly, frequently examine the children, endeavour to promote a regular attendance by public exhortation and private advice, and are anxious as far as they can to remedy defects in the school-house and premises. Indeed their co-operation in this regard with the wishes of the Commissioners is most cordial.

Teachers.—The point that most frequently recurs to one's mind regarding the teachers in this district is, not their want of zeal, not their want of energy or intelligence, but their want of suitable training. It is a truism to assert that, a trained workman in any handicraft can in a shorter time and with less labour to himself, turn out work much superior to that which can be accomplished by one only partially skilled. The illustration is as applicable to teaching as it is to work in any handicraft or profession. That the majority of the teachers have received some preparation for their duties before commencing to discharge them is quite true—they have been monitors (mostly) for years, often assistants afterwards, and in either or both capacities have served under masters who, in many cases, were themselves trained. But such preparation is necessarily imperfect; their instructors not having the same facilities and appliances, could not possibly reproduce in others the effects originally produced in themselves, and the result is but a feeble imitation. One of the illustrations that occurs to me as to the necessity which exists for training, is in the saving of time, which could be effected by the introduction of suitable discipline, and systems in the mechanical arrangements. The school hours usually extend from ten to three o'clock, a period of five hours, sub-divided so as to give one half hour to each lesson, thus involving nine changes. But each change in those imperfectly disciplined schools absorbs six or seven minutes, instead of occupying as it should do, less than one, so that about twenty per cent. of the entire available school-time is quite thrown away. The

crude methods of instruction, again, so often followed, in which noise and shouting take the place of quiet effective work, are to be soon with painful frequency.

Two teachers in this district have been awarded pensions during the year, and these teachers appear quite satisfied with their treatment. There is a general feeling that the age for compulsory retirement is too high, and were it lowered by five years, the result would be hailed with general satisfaction. This would of course involve an increase in the annual amount of deduction from the salaries, and I think, such an increase would be willingly acquiesced in. During the year, I have heard no complaints from managers as to the conduct of their teachers, nor from the teachers in their relations with their managers—they appear to work with the utmost harmony. It speaks well also for the general good feeling between teachers and parents of the pupils, that except in cases of illness or other causes of unavoidable absence, the children who were qualified by attendance to attend the Results Examinations, were invariably present; in some instances, even at considerable inconvenience, as when temporarily residing with friends at a distance. Of course between parents and teachers cases of friction have arisen—some of the former complaining that the children are making progress that is not satisfactory, and others again, but indeed few, that the rate is too rapid and endangers the health. These latter complaints are heard only from the better circumstanced class, who themselves are pretty well educated, who take a very lively and active interest in how their children progress, assist them at home to some extent—at least to this, that the pupil has nothing to unlearn from what he hears at home, and the atmosphere there is as much congenial to progress as that of the school. On the contrary, those who complain are those least able to judge; they are naturally annoyed at finding neighbours' children promoted, while their own are left in the background, are likely to attribute the cause to any but the correct one, viz., their own general indifference, necessarily reflected in their children, and chagrin is felt at the general result by people who are disposed to blame everybody rather than themselves. The teachers were sometimes rather prone to meet this difficulty by advancing children who did not deserve it, and in this attempt to soothe wounded vanity, were inflicting real injury on themselves and their scholars. I have endeavoured to stay this disposition, and I believe there will be less recurrence of it in future.

School Accounts.—The school records are kept in the main accurately. Not more than three or four instances arose in which from the slovenliness of the entries had I reason to suspect that this apparent carelessness was a cloak for the still graver fault of falsification. Among the younger teachers, there is a good deal of blundering, from want of experience and want also of a due sense of the importance of keeping the accounts in strict conformity with the printed instructions; but the older teachers keep theirs with a degree of care, that might almost be termed scrupulous.

General Proficiency—Reading.—In reading I observe some improvement; greater attention has been paid to distinctness of articulation, so that a stranger has not now to put so great a strain on his attention to understand what the pupil either reads or says. Still sufficient attention is not paid by the teachers to insist on a calm, deliberate utterance, and to make each pupil hear for himself—as it were—the ring of each syllable on his own ear, and that when he does not take time to do this, a listener must have only a confused notion of what he utters. Of course, it must happen, that a teacher will understand a scholar,

Appendix B
Reports on
the State of
Schools.

Mr. F.
Barclay.

Appendix B
Reports on
the State of
Schools.

Mr. F.
Eardley.

and the scholars each other by a sort of mental short-hand, and the necessity for slowness is consequently not apparent to them. This tendency to hurry, was perhaps fostered by the injudicious way in which the tasks are generally recited. No doubt the tasks are a labour to the scholars—often very imperfectly learnt—and each boy was no doubt eager to assure himself as soon as possible that he was discharged of a disagreeable responsibility. Hence rapid utterance and mumbling in those parts in which he was not quite safe.

The matter of the reading lesson is often not sufficiently understood; but the significance of individual words is seldom left unexplained, and with this vocabulary at their command, the scholars, as their powers of judgment ripen, will no doubt be able to understand any passages not more difficult than those they can read with moderate ease. Where facility in recognising words at sight, without going through the laborious process of spelling, is not acquired, the sense is rarely understood, and hence I think it is of more consequence to acquire this facility at school, than to dwell too long on the explanation, as the sense of the words will be almost certain to be acquired in after life. To an examiner the explanation, often defective as it is, appears less intelligent than the judiciousness of the instruction would warrant from the following circumstances—the reading lessons for each year's stage can be seldom all gone through twice in the interval between two successive Results Examinations, certainly not twice by each individual presented; as a pupil is necessarily put forward, who makes barely 100 attendances, while the school is open, as a rule, more than 200 days. Hence, in a good many cases the stumbling, inaccurate reading, the faulty explanation, or the utterly blank faces of those who see perhaps for the first time on the very day of examination the passages selected as a test.

Spelling.—As a rule, the children now spell very fairly. The great point secured is, that it is scarcely made a separate lesson at all, but is interwoven with every other. During the reading lesson attention is drawn to how the words are spelled; during the transcription exercise, spelling and writing are both aimed at, and similar objects are kept in view in the writing from dictation. Indeed the real, formal and to some extent practically useless spelling lesson as such simply, is disappearing, and with its disappearance a great improvement in the orthography of the pupils is noticeable. For many years it has ceased to be recognised as a distinct subject in the English code, as pupils who read fairly and write fairly, can hardly fail to spell in the same manner.

Writing.—Nearly all the pupils pass in this subject, and nothing but gross neglect could secure their doing anything else. The material appliances are now so excellent, that but little supervision is required, and instruction in it can be commenced at a very early period in the child's career. The delight which young children take in scribbling on slate or paper, can be taken advantage of as a pleasing alternation from the reading lesson. While mediocrity is general, excellence is rare, and is confined to those schools in which the teachers themselves excel. The cramp angular hand affected by girls not so long ago, has nearly altogether disappeared, and its disappearance is regretted only by those who think it is "ladylike" to write a hand that is not easily legible.

Arithmetic.—There is a perfect contrast in the proportion of passes in this subject and in writing, in the latter the fewest failures occur, while arithmetic is the great stumbling block to promotion. In it, as has been frequently pointed out, a pupil must be either right or wrong, there is no middle course. A cause of the number of failures is that

the scholars are not sufficiently drilled in blackboard and mental exercises. When left to themselves to work out long exercises at the desks, a considerable number will idle rather than work, and I consider a good deal of the time set apart for the subject is thus wasted. When it is urged how can one teacher keep a number of classes occupied in the useful sense of the word, I say that a teacher who knows his business can, but one who does not, cannot. This objection is urged when after examining the classes and finding a comparative failure, I call for the time-table to see whether a sufficient period is daily set apart for the subject, say from an hour and a half to two hours, and finding this the case, I often ascertain the failure is due to the fact that little or no instruction is given orally; the technical terms are not understood, and a question varied however so slightly, from the stereotyped routine, is pretty certain to be missed. The use of test cards in ascertaining the knowledge acquired by the pupils is not without some drawbacks. The teachers now procure readily, and do so generally, cards similar to those the Inspectors use, but instead of employing these for their legitimate purpose in testing periodically the progress of the pupils, they are made to supersede the text-books, and thus the instruction is reduced to a species of 'grind' or 'cram', so that I fear the teaching is becoming more mechanical year by year. Again, the practice of copying at examination which these cards were intended to render impossible, has not quite been put down, I have known instances where clever scholars after working out their own sums, employed their spare time in helping a duller neighbour. However this abuse is not common, but it only shows how a theoretically complete arrangement may still need close supervision.

Grammar.—This subject is not taught with as much success as it used to be, and it is one of the most usual entries in my note book—"Pupils generally deficient in grammar and geography." However, it is a matter for congratulation, that the attempts of the sixth class pupils at writing a short letter on some simple subject are much superior to what could be found a few years ago. The falling off of the classes lower than the sixth, I attribute to the increasing neglect of tasks or "home lessons."

Geography.—As to proficiency, this subject may be bracketed with grammar. A singular neglect of the great assistance afforded by the maps prevails, and it often happens that pupils in the fourth class are unable even to point out the counties in Ireland on the map from which they are professedly instructed. This is another illustration of the necessity for training of the teachers, as the pupils, when able to read, should be so disciplined that they ought to be able to inform themselves on the map geography required, and no doubt they would, were their natural eagerness and curiosity properly directed. A few minutes daily from any intelligent teacher, first to direct and then afterwards to ascertain their progress, would easily suffice for the fulfilment of the requirements.

Agriculture.—Singular to say, this subject is unpopular with most of the teachers, as they allege the parents do not wish their children to be occupied at school with a subject that they will learn practically at home. I do not altogether believe in this theory, as I have frequently asked the scholars had they shown the text-book to their fathers, and almost invariably the reply was, they had, and that it was considered a very useful book from which many good hints could be obtained. I think the subject should be withdrawn from the fourth class programme, as the pupils in that class are not able to read the book themselves with any profit, and

Appendix B.

Schools.Mr. F.
Blandsp.

Appendix B. whatever little smattering of it they acquire has to be communicated orally.

*Reports on
the State of
Schools.*

*Mrs. P.
Eardley.*

Book-keeping.—This subject is increasing in popularity, particularly in girls' schools. This is a matter for congratulation, as in most country towns, whatever book-keeping has to be done, is for the most part performed by the female members of the family, and it is therefore desirable, they should have previously had some practice in the subject. I cannot speak highly as to the proficiency displayed, in some cases; the "sets" have been simply copied out of the "key," and the pupils when questioned as to the entries, displayed entire ignorance of the matter. However, it must be said that last year, I received more intelligent answering than ever I did previously.

Geometry and Mensuration.—There is increasing apathy with regard to the instruction in these interesting subjects, whether arising from the increased pressure as to the absolute necessity which exists for attending to the essentials, viz.—reading writing and arithmetic, or to the apparently growing disinclination of boys to apply themselves to private study. The fact is, that few of those who are presented, have entered seriously into the subjects at all, and they have been got up apparently, rather as a qualifying extra, with the hope of a chance "pass," than from a desire to have the pupils intelligently acquainted with the matter.

Algebra.—The same may be said as regards algebra. Indeed, it strikes me, whether any really effective instruction can be imparted in any extra subject, while the principal is or should be, fully occupied with the junior classes; and I am disposed to suggest, that no fee should be paid for these extras, unless the instruction in them be either imparted outside of the ordinary school-hours, or they be intrusted to an extern teacher. Of course, it would not be expected to have such a restriction applied to large schools with many assistants, where one of those assistants might have a special aptitude for instructing in one extra subject, and another in another; but I am speaking of the schools merely with which I am conversant, with only one assistant at most; and to these, the suggestion I have above indicated, might apply.

Needlework.—Plain sewing and knitting are taught in all schools in which a female teacher is employed, and the results are on the whole very fair. The children in the fourth and higher classes make useful articles of wearing apparel; those of the second and third being for the most part confined to practice on material of little value. In the sixth class, it is quite usual to find that the girls have made their own everyday dresses, those intended for Sundays being invariably sent to a regular dressmaker. There is a very interesting industrial class in Templetony girls' school, which deserves special mention from the great practical benefit derived from it by the members of the community. The material is supplied by the manager, Mrs. Power Lacey, and the finished articles are sold at cost of material to the poor of the neighbourhood, who have joined in a sort of club. Each member of this club, subscribes from 6d. to 2s. 6d. a month, and the amount thus subscribed is increased one half by the manager at the end of the year. With this sum each member purchases such clothing as may be considered most useful, and included last year such articles as chemises, aprons, jackets (for men and women), dresses, shirts, stockings, cross-overs, quilts, petticoats, night-dresses, flannel shirts, pinafores, and shawls.

I remain, gentlemen, your obedient servant,

F. EARDLEY, District Inspector.

The Secretaries, Education Office.

Mr. S. E. STRONGE, A.M.

Ennis, February, 1881.

Reports on
the State of
Schools.*Mr. S. E.
Stronge.*

GENTLEMEN,—I have the honour to submit, for the information of the Commissioners of National Education, the following General Report upon the schools under my inspection in the county Clare:—

For almost seven years I have had the schools of this district under my supervision, and this is the third general report—and I regret to say the last—in which I have given my opinion of their progress and usefulness. In the two preceding reports I have very fully described the peculiar form of this district, and have briefly indicated how thickly inhabited the western portion of it is by a population sustained almost universally by agricultural or pastoral pursuits. I do not consider it necessary to go over this ground again, and shall, therefore, confine myself to such changes and improvements as have taken place in school buildings, and in the teaching staff as well as to some remarks upon the work done in the schools.

At the date of my report of 1879, there were 114 schools open for instruction, and under my inspection in this district. There are now 105 only, the inspection of thirteen having been transferred to the inspectors of the Gort and Limerick Districts and four new schools having since been opened. These thirteen schools were on the north and east of the district—the only marginal line on which such a change could be made as the southern and western sides are bounded by the River Shannon and the Atlantic Ocean. These schools were situated in the most thinly inhabited part of the district, and though small as to average attendance, and within a short distance of my centre, yet the change narrowed appreciably the area over which my work was distributed, and was, I hope, an advantage to the public service by allowing me to devote more time and thought to the schools still remaining under my care.

During the two years preceding March, 1879—the date of my last General Report—four vested school-houses were built, two non-vested houses were received into connexion, and five houses were improved in respect of flooring or increased accommodation. During the past two years four non-vested schools have been received into connexion—Harmaney Row, in the town of Ennis; and Horse Island, Low Island, and Gortglass—all in the parish of Kildysart. Two of these—Horse Island and Low Island schools—are built upon islands, as their names sufficiently show. These islands, as well as Coney Island—on which a National school was opened many years ago—lie in the estuary of the River Fergus, are a considerable distance from the mainland, and are only accessible by boat at favourable seasons. Before the establishment of National schools on these islands—and towards the building and furnishing of two of them Mr. Vere Foster gave contributions—the inhabitants occasionally employed an uncertificated teacher, who went from house to house as a private tutor, and when the children became old enough, their parents usually sent them to the mainland to board at a relation's house, and complete their education at some well-known National school. The opening of schools on these small islands has, therefore, given a means to the inhabitants of educating their children at an earlier age, and at much less cost, than formerly. The vested school-houses of Doonbeg (average attendance 130), Banskha (106), Querrin (110), noticed in my last Report as building, have been completed, and are now in daily use. A class-room has been added to

Appendix B.
Reports on
the State of
Schools.

Mr. S. E.
Strawn.

Fergus View National school, whose average attendance is 130, and another to Shannon View (150). One non-vested school—Kanturk—has changed its earthen floor for a boarded one, and the addition of a porch has further promoted the comfort of the school-room. In the case of another non-vested school—Carrowdolea—an old and inefficient third-class teacher retired, and upon my recommendation a young second-class teacher was appointed. The attendance almost trebled, necessitating the enlargement of the school, and this has since been done. This exhausts the list of improvements that have taken place during the last two years, and the progress made is not inferior to that of the two preceding years; but though I have thought it my duty to urge upon some managers, and especially in the cases of the Inagh and Kilmaley parishes, the necessity of providing better houses or increased accommodation, I regret to say that I do not at present know of a single building or improvement certain to be undertaken, except one. This sudden and much to be regretted relinquishment of all designs and projects in improvement of school buildings is, no doubt, owing to the depression of trade and distress which prevailed in 1879 amongst the farmers, and to events subsequent to that distress, and extending in their influence down to the present time.

There are at present, as I have before stated, open for instruction and in daily use, 105 schools under my inspection. Of these 60 are non-vested buildings—houses which have been built for schools by local funds or subscriptions, or houses built originally for other purposes, but rented by the manager, and furnished and fitted—often very meagrely—as school-rooms. There are 10 only of these which have not boarded floors, and about 12 in all which are uncomfortable houses; cold in winter, ill-ventilated in summer, and generally only to be tolerated as school-houses until better can be provided. I have personally called the attention of the managers to these cases frequently, and the Commissioners have in some cases threatened suspension of all grants. Some managers are quite willing and even eager to provide better houses, but it is on some estates impossible to obtain the lease required by the Commissioners, while on others it is equally impossible to get possession of a site at the exact point where the school-house ought to be built. The manager is thus compelled to rent a house already built, and furnish it as a school-house, and I need hardly add, that houses suitable for conversion to school purposes, in any rural parish in this district, are rare indeed. Of the remaining 48 non-vested schools, 20 are quite as good buildings as the vested school-houses, houses towards the erection of which a grant from the public funds was given, and whose building and furnishing were, therefore, under the supervision of the Board of Works. The 45 vested school-houses are, with the exception of 8 or 9—which were built 30 years ago—good houses, and are in all but 7 or 8 cases kept in tolerable repair. There is, however, little taste or sense of completeness shown in the execution of any repairs that may be from time to time required. A want of care, thoroughness, and finished work would seem almost to be part of the contract. After the workmen have gone, a loose or broken slate, an improperly fastened cup-rack, or ill-ground paint thickly laid on, often offend the eye. It is, however, doubtless expecting too much to look for faultless work from men who have not learned their trade and received their training in a town.

Vested school-houses are usually built on a plot of ground varying in extent from half a rood to half an acre, and this space is enclosed by a wall. The manager and teacher are responsible for the manner in which this area, whether it be used as a play-ground for the pupils or

otherwise, is kept, and the care and neatness shown in keeping them reflect little credit upon those who should be the patterns of order and tidiness to others. In many instances when the school-houses were originally built, the enclosed premises were not drained, and now in damp weather they have the appearance of a ploughed field, and in dry weather are white as the dusty highway. Large stones, deep ruts and holes, or a wilderness of weeds, give some school-grounds at least a character of variety. They are, also, as a rule, too limited in area to be in any degree serviceable as a play-ground, yet no attempt has been made to divide them into neat grass-plots with gravelled walks between, much less to plant flowers, or shrubs along the enclosing walls. I know of four instances only—and all in cases of non-vested schools—in which the school-grounds are kept even with an ordinary attention to cleanliness and neatness. Care and taste could not, I admit, be exercised in every case, for sometimes the site is a rock, and in other instances is exposed to the destructive winter gales from the Atlantic. Yet I could point to many school-grounds where the hand of care and taste, at little cost, could easily effect such a pleasing change in their appearance as would have a decided influence in the æsthetic training of every child attending the school.

It is much to be regretted, that such ideas of taste and such a desire for improvement are the exception and not the rule with the managers and teachers; for the homes and house-surroundings of the pupils of the National schools in this country are not such as would teach or cultivate taste, or form, through early association, habits of order or even engender an inclination to improve. It is, therefore, all the more necessary that the pupil and householder of the future—if the future is to be an improvement on the past—should have an opportunity of learning, or at least seeing, at school a superior order of things to that already known to him. And this, too, should be quite as striking to the eye in the internal arrangements of the school-room as in the laying out of the grounds, and cleanliness of the approach. No school-room or porch, if there be one, should be without cap and shawl racks, arranged in tiers according to the age or class of the pupil; rails for tablets, tablets of different sizes on different rails; boxes for fuel; and a press with compartments for the copy-books of the different classes. Such attention to the cultivation of his school-grounds, and such a completeness in the internal ordering of his school-room are absolute necessities in good school-keeping. All the improvements suggested could easily be effected, and maintained when effected, at a small annual expense, and their influence from day to day, ever obtruding on the eye, in the training of the pupil it would be hard to over-estimate. It is possible for him in every parish, if he attend school with fair regularity, to learn reading, writing and arithmetic thoroughly enough, and much more fairly in the form of grammar, geography, agriculture, book-keeping, and even Euclid and algebra; but if development of the observing faculties and, in sequence, the formation and cultivation of ideas of form and arrangement be an element in education, I fear it is frequently over-looked, in many cases, through the teacher's inability to train, and ignorance of a very important portion of his duties and, in some, owing to teacher's attention and energies being wholly devoted to the mere acquisition by his pupils of such a knowledge of the subjects of the programme as will secure to him as large results fees as possible. In many cases, I have said, this want of training in style and system on pupil's part was owing to teacher's ignorance of a portion of his true functions. The blame can hardly in all cases be laid to teacher's charge. The majority of teachers have never received other training

Mr. S. E.
Stewart.

for their profession than such as they have received "at second-hand" in another National school, and having spent their lives within the bounds of their own narrow circle of men and cities, they know almost nothing. Their ideas are of the parish—parochial, and though earnest and hard-working in carrying out the rules of the Commissioners, and conveying instruction according to the programme, it must be admitted that, in ideas of discipline, order and form, they are not much superior to the pupils they teach. Of the drill to be seen in English schools—that prompt obedience to command; that steady regularity and exact concurrence of movement, shown even in the salutation of the casual visitor, as if one vast animated machine—the untrained teacher has formed no conception, and probably has never heard. His pupils walk with head and shoulders bent, stand in a lounging position in draft, and often lean upon each other; while the confusion and noise which occur at a change of divisions, in some schools, must be seen in order to have its influence in the education of the pupils fully appreciated. Yet, the teacher in this country has material on which to work, second to none in quickness to learn and to whom a rigid training in discipline and order might be of lasting benefit, both at home and abroad. I have often urged upon teachers, who were anxious to rise in their profession, the necessity of travelling, when on vacation, outside the confines of their own country, of visiting some of the best schools in the large centres of population in Ireland and England, and bringing home notes as to the conduct, discipline and order of these schools, the educational apparatus and methods of teaching in use. The only road to promotion for an untrained teacher, who is ambitious, is to follow such counsel, for he can hardly be expected to evolve, invent a new, or learn in a remote country, the latest and most improved methods of conducting a school, or conveying instruction. In many schools, both those of trained and untrained teachers, it seems not to be known, or if known, to be ignored, and deliberately put aside, that it is the process we pass through which is the education and not the mere knowledge acquired. The form of that process, too, I should consider of much importance. The cultivated mind looks, first of all, for good matter, but does not consider that perfection has been attained, if the good matter be not accompanied by good form. I have only to add my opinion that, were the form and process I speak of as well attended to in this country, as mere instruction in the subjects of the programme, there would little remain to be desired in primary education.

Deducting the two Convent schools, there are 104 schools. Two of the Poor Law Union schools have two departments each—under classed or unclassified teachers.

Some improvement has taken place in the classification of the teachers—an improvement very desirable in the interest of the teachers themselves, and no less in the interest of the pupils whom they instruct. With regard to this improvement I take some credit to myself. I have strongly urged the managers on all occasions never to employ a teacher of third class where one of a higher classification and better training was willing to accept the situation, and, in pursuance of this advice, I have advertised three times during the past year on behalf of managers, and obtained the services of a first class teacher in each case. Action like this, too, has the concurrent effect of stimulating the principals and assistants of a district to come forward for promotion, as the only means of obtaining better paying positions for head teachers on the one hand, and for assistants on the other, situations as principals. I will conclude my remarks with regard to the teachers— and I fear all I have

said is not praise—by observing that with few exceptions, they are a very conscientious hard-working body of men and women, loyal to the State and the duties of their calling, so far as they know those duties.

As to the work done in the schools, and the progress made during the last two years, I have but little to say. I have had sufficient experience as an inspector of schools to learn that the inspector's interpretation of the programme—if at all reasonable—as shown by his examination, is the teacher's guide. Were I, therefore, to furnish a detailed statement as to attainments of the pupils in reading, writing, arithmetic, grammar, and geography, I should be merely setting forth how far the teachers succeeded in instructing their pupils according to the standard required by me, as to amount of knowledge and style and manner of answering. Whether that standard and style were high or low, right or wrong, and whether my opinions as to certain methods of teaching were ordinary or peculiar, I must give the teachers the credit of having seldom failed, by honest and earnest work, to do their best to please me.

In the General Report, which I had the honour of writing in the year 1877, regarding the schools of this district, I found it necessary to notice very unfavourably the general training for the profession of teacher which monitors, as a rule, received. As it is by members of the monitorial staff that vacant appointments as principals and assistants are usually filled, I consider it of paramount importance that every attention should be paid by the teachers to the training of these young persons for their future duties, with the object of impressing upon teachers the necessity of system and care in discharging this duty, I issued in the year 1879, to all schools in which monitors were employed the following circular :

"TRAINING OF MONITORS.

"To secure uniformity and success in training monitors, I think it desirable to offer for your consideration and adoption, the following suggestions:—

"I. Each monitor to use one or two of the Board's large exercise books, price 4d.

"II. To page this book and divide it into parts for exercises in Spelling Book and difficult words, arithmetic, grammar, geography, lesson books, and Dr. Joyce's Handbook of Method. The ruled books supplied by the Board to be used for book-keeping.

"III (a.) As home work for monitor, on two evenings at least each week, teacher should select a suitable sentence in prose or verse and mark the words to be parsed. On two other evenings, eight or ten carefully chosen questions in arithmetic should be given—two of them in theory.

"(b.) *Pari passu* with his written home exercises, as well as on the two remaining evenings, monitor should prepare carefully and minutely for oral examination in school by his teacher fixed lessons in grammar, geography, lesson books, &c.

"(c.) All monitor's written work should be as neat as care can make it. Each exercise to be signed and dated by monitor, marked 'Exd.' initialled, and dated by teacher.

"(d.) It would be a great future gain to teacher if he kept a large note-book for the purpose of recording sums given to work, sentences to parse, and other questions.

"IV. On every third or fourth Saturday teacher should hold a written examination of monitor on the ground gone over in each subject by questions carefully chosen beforehand, and selected in such a way as to test monitor's intelligence as well as knowledge, his neatness of work, and style of expression. Mr. Vere Foster's No. 11 might be used for this examination, and if teacher would kindly forward the book with the answering marked to me, I should be able to note monitor's progress, and possibly aid him in his studies by my advice.

"V. During monitor's first year he ought to make himself thoroughly acquainted with the methods of teaching set forth in Dr. Joyce's handbook,

Appendix B.
Reports on
the State of
Schools.

*Mr. S. E.
Strong.*

Appendix A part II. Teacher should see that monitor prepares for examination a portion of this work every day during his first year, and that in teaching a class he never fails to put the methods learned into practice. If teacher does this, he will find his monitor during his second and third years as efficient as another assistant.

Mr. S. E. Stronge. "VI. During his third year monitor should mark the rolls, enter the report, and as far as possible keep the school accounts."

The teachers readily adopted my suggestions and carried them into practice with system and success. The result at the annual examination of 1880—an examination regarded by many as peculiar and difficult—showed what well-directed labour can do. Thirty-five monitors of all ranks were examined, of whom ten only failed to score fifty per cent. each of the maximum, and five of these only failed to obtain classification. Twenty-one answered so creditably as to be recommended for promotion to first class, thus giving them an opportunity of a further course of training for their profession, and offering to managers a list of more highly qualified candidates from which to select principals and assistants. Managers have taken full advantage of the choice thus presented; for, of the nine boys appointed first class monitors, five have already obtained appointments as principal or assistant, and one as pupil teacher.

I shall conclude by drawing attention to the manner in which spelling is taught in the English schools. Large square sheets with four columns of difficult words in large print are suspended from an easel before a division. The pupils of the division sit in benches and copy out each word on paper four times—a certain number of words only being allowed for each lesson. When by such a transcription lesson each day all the words on one sheet have been copied, the division is tested by dictating words chosen at random from the sheet. Thus spelling is regarded altogether as a matter of form and eye. This plan saves much time. The pupil does not waste time in copying out the monosyllabic words which necessarily recur so frequently in any transcription lesson, and whose correct spelling he knows sufficiently well already. If similar sheets of words—selected from our lesson books—were in use, I have no doubt it it would improve the spelling and save the time and labour of the teachers.

I have the honour to be, gentlemen, your obedient servant,

S. E. STRONGE.

The Secretaries, Education Office,
Dublin.

Mr. J. M. Loughnan.

MR. J. M. LOUGHNAN.

Kilkenny, March, 1881.

GENTLEMEN,—I have the honour to submit the following general report for the year ended 28th February, 1881, on this district, of which the city of Kilkenny is the official centre. Since the date of my taking charge, March 1st, 1879, this district has been considerably changed in area, and the number of its schools increased. The last general report of my predecessor accounted for 118 schools, I have at present under my supervision 129 classed as follows:—

Ordinary Rural Schools,	.	.	.	114
Night School,	.	.	.	1
Model Schools,	.	.	.	3
Convent Schools,	.	.	.	5
Poor Law Union (each 2 departments),	.	.	.	3
Inoperative (rural),	.	.	.	3

Total, . 129

The district formerly comprised portions of Kilkenny, Tipperary, and Queen's Counties, it is now confined to the counties of Kilkenny and Carlow, embracing within its limits the greater part of the northern portion of the former and the southern extremity of the latter county. Two rural schools which had been suspended for some years have been re-fitted, and are now in working order. Two new schools, Crannagh, mixed, formerly in connexion with the Church Education Society, Kells, female, and a night school for males have been recently established in the city of Kilkenny. This last has met a real want, as a large number of youths, who from necessity rather than inclination have been obliged to give up attending day schools, to earn a living, and are now employed in the manufacturing and trading establishments of the city, are making a meritorious effort to compensate for their defective education.

Appendix B.
Reports on
the State of
Schools.

Mr. J. M.
Longhurst.

On the whole, the position and number of the National schools in the district leave little to complain of, and except in one or two localities educational opportunities are brought within easy reach of the remotest homestead.

A very pleasing feature of the district is the facility afforded for the training of infants. Under my charge are ten preparatory schools specially fitted for their reception, and exclusively devoted to the instruction of infant children of both sexes. In addition, four of the convent schools maintain separate departments for a like object. In a few of the more populous towns, notably Graigue and Borris, infants' schools might be opened with considerable advantage; I fear, however, notwithstanding the anxiety of the managers that difficulties in procuring a site, and financial reasons, for the present preclude the hope of their establishment. It has often occurred to me that hitherto sufficient provision has hardly been made for infant training. These schools wherever in operation always largely increase the usefulness as well as popularity of the National system; and in many instances where now double schools, male and female, exist, and two houses are available, I may be permitted to throw out the suggestion that their conversion into two mixed schools, one preparatory, and the other for the more advanced pupils, might not be unattended with profit.

The female teacher would find her more congenial employment in the one, the male in the other; even when the attendance did not allow of an assistant, the instruction of the senior girls in needlework could be readily provided for. In the general run of schools it is extremely difficult, if not impossible, to secure sufficiently constant employment for the junior pupils, and the almost continuous pleasing occupation of the mind of the child of tender years, appears to me the best safeguard against the weariness and distaste to learning, more than likely to spring from the monotony and drudgery of early routine school work.

A child's first discipline in the acquirement of knowledge should savour more of the pastime than the task. On the Continent this principle has been long acknowledged, and that it has been accepted is sufficiently evidenced by the strong and wide appreciation in which the Kindergarten school system is held.

The state of the school-houses generally—some being exceptionally good—as to repair, cleanliness, fitting up, and comfort, may be regarded as satisfactory, and the managers co-operate with me to the best of their power in effecting any improvements and alterations that from time to time become necessary. Of the ordinary schools, thirty-two have teachers' residences attached, and application has recently been made for grants to erect residences in three other cases. It is much to be regretted,

H

Mr J. M.
Longland.

notwithstanding, that many of the teachers still find a difficulty in procuring suitable, however humble, accommodation in the immediate vicinity of their schools. The district Model schools have within the past two years undergone at the hands of the Board of Works considerable alterations and additions, chiefly with a view to provide for the training and dwelling accommodation of pupil teachers, of whom seven are now in residence, and their constant supervision by the head master, and are now thoroughly complete in both domestic and educational arrangements. The teaching staff labour zealously in the discharge of their duties, and these schools, notwithstanding great opposition, continue to command their average numbers in attendance.

Of the teachers of the ordinary schools, I can almost unreservedly say they have been faithful to the obligations of their position, and successful as school keepers according to their abilities. The breaches of discipline and departure from rule coming under my notice and reported for your information have neither been very weighty nor numerous, and the Commissioners have seldom had to visit them with their displeasure. The greater number are entirely devoted to their profession, of many years service, and make it their study to exercise a most beneficial influence on their pupils, both by precept and example, especially where they are brought into closer relation with them, and where it is most required, in the towns and villages. The younger members I regret to say do not evince sufficient ambition to improve their educational and social status by seeking advancement to the higher grades of classification, though in this respect progress is noticeable as this year the number of candidates desirous of presenting themselves for promotion at the annual examination promises to be exceptionally large.

With the single exception of one teacher who has recently been subjected to that species of social outlawry some time since originated in the west of Ireland, and even whose warmest advocates have denounced as unmeaning and senseless when applied to schools, no instance has come under my notice in which the teachers are on other than cordial terms with their neighbours.

Of the successful, earnest, and disinterested labours in the field of National education of the ladies who conduct the five convent schools under my charge, and bear on their rolls the names of upwards of 1,500 pupils, it would be supererogatory for me to speak.

The position of monitor in our schools is much sought after, but the literary qualification of the candidates is by no means commensurate with their numbers. Nor can I speak with gratification of the success of most who have recently completed their literary curriculum. For this, two causes are assignable, either these young persons do not devote themselves to their studies with sufficient assiduity during their course, or their instruction is neglected by their teachers. I incline to the former belief, for though unquestionably good teachers, where opportunity offered, should find any time at their command more highly remunerated by private tuition, or the like, still, I think, they are as a rule disposed to act conscientiously towards their monitors, but my fear is that their good intentions are not always adequately reciprocated by the personal exertions of this class of their pupils. This apathy on the part of monitors is explainable possibly in this way, that many of them as they mature in years abandon their early design of becoming teachers, and use their present employment merely as a means to an end.

Reading.—Though the failures on the whole are not very numerous, the gradations of excellence in this branch are most unequal and marked. In most of the schools the reading may be characterized as

fairly intelligent, but those in which a pleasing or finished style has been reached are limited, the Convent and Model schools affording the best examples. Indistinctness of utterance, a certain disagreeable jerking, rapid method of enunciation, and neglect of punctuation, are the faults to which I have most frequently to call attention, and are much more noticeable than gross incorrectness of pronunciation.

Appendix B.
Reports on
the State of
Schools.
Mr. J. M.
Longhorn.

Spelling.—Word and phrase spelling are, I find, especially in the junior classes, about the best taught subject of the Programme, and leave little to be desired. The proficiency in spelling, as tested by the dictation exercises in the senior classes bears a somewhat retrograde ratio to the standing of the pupils.

Penmanship.—I wish I could report more favourably on this branch. Of course there are many schools in which it is taught with great success but in the vast majority the proficiency attained barely touches mediocrity. The number of written copy books required is nearly always forthcoming, most frequently exceeded. Still my impression is they are hurried through in a perfunctory way, without supervision on the part of the teacher, and, as might be expected, much care on that of the pupil. Far too little attention is paid to the manner in which the children sit to their work or hold their pens. As an experiment, with a view to improvement, the teachers now preserve from year to year the transcription exercises of second and third classes, that have been written in my presence, arranged in order and labelled, for the purpose of comparison and as a possible record of progress.

Arithmetic.—The junior classes are almost invariably up to the requirements of the Programme, though I still have to contend with the habit of counting on the fingers and other equally pernicious expedients. The transition to fourth class is trying, still making due allowance, the exercises are not worked with the accuracy or precision one might expect from pupils well grounded in the subject. The pupils are not sufficiently practised on paper. The fifth and sixth classes rarely exhibit an intelligent knowledge of theory, but work uninvolved questions with tolerable facility. In connexion with this I would recommend that a supply of the exercise paper, now on the Board's list, should be regarded as a necessary requisite in every school.

Grammar and Geography.—The success in these subjects, and the interest taken in them by parents and pupils being about identical, they may be considered together.

In not half the schools of the district is either taught systematically, outside the schoolroom they are looked upon as superfluous, and only calculated to interfere with the acquirement of more practical and useful learning; hence the teacher cannot obtain for them attention, and is well content to secure a mere pass. Grammar I can suggest no means to popularise. As regards the latter, I was within the last month forcibly struck with the wisdom of the suggestion offered frequently before, to have the Ordnance Survey sheets placed on the Board's list, by the intelligent knowledge of the maps displayed by the pupils of a small rural school, in which the Ordnance map of the locality had been mounted and suspended by the teacher. The sheet happened to be fairly varied in delineation, containing towns, villages, rivers, enclosed pieces of water, woods, contoured hills, &c. Nearly every child learning geography could trace accurately the roads in the vicinity, the boundaries of farms, and distinguish clearly the more salient points of the landscape. When taken to the ordinary school maps the consequence was remarkable, the Ordnance sheet had evidently been the Rosetta stone to these topographical hieroglyphs.

Appendix B. *Agriculture.*—The merest rudiments even are little known, nor do I foresee much probability for improvement. Few of the teachers possess or pretend to the practical knowledge necessary to facilitate and illustrate instruction in the theory, and possibly wisely abstain from enlarging on matters with which they are often less conversant than their audience.

Needlework.—Plain sewing and knitting are successfully taught in all the female and in many of the mixed schools. Extra branches are not much affected. At the examination held in June last year to enable teachers to procure certificates to earn results fees for imparting instruction in them, only four were successful in drawing, and an equal number in vocal music.

I have the honour to be, gentlemen, your obedient servant,

J. M. LOUGHNAN, District Inspector.

The Secretaries, Education Office.

Mr. W. M. Weir.

Mr. W. M. WEIR, A.B.

Youghal, March, 1881.

GENTLEMEN.—In accordance with the instructions contained in your letter of December 15th, 1880, I have the honour to submit for the information of the Commissioners the following report on above school district, which has been under my charge for the past two years.

The district is made up of about equal portions of the counties of Cork and Waterford, and extends along the south coast from the mouth of Cork Harbour to a short distance east of Dungarvan, running inland to an average extent of about twenty miles.

There being no manufacturing industries within the limits of this district, if I except the distillery at Middleton, and the wheel and waggon works at Cappoquin, the great mass of the people live by tilling the soil and by fishing, often by a combination of both pursuits.

Excepting the Christian Brothers' schools in the towns of Dungarvan, Lismore, Middleton, and Youghal, and two or three small schools under the Church Education Society, the people of this district are altogether dependent for elementary education on the National schools, of which there are at present 115 in operation, classified as follows:—

Ordinary National Schools,	.	.	.	105
Convent " "	.	.	.	7
P. L. Union " "	.	.	.	3

The school-houses are, for the most part, good, substantial structures, many of them being possessed of a fair amount of architectural adornment. One large mixed school held in an unsuitable house has recently been superseded by a school vested in Trustees, and containing separate departments for boys and girls; and a beginning has been made in the erection of a new school-house in the populous locality of Whitegate, to supersede the wretched building at present in use, in which there is not accommodation for more than half the average attendance.

These improvements, realized and to come, are owing to the exertions of our active Manager, the Rev. J. Ryan, P.R., of Aghada, who has

spared neither trouble nor money in his endeavours to provide his people with proper school accommodation. I must not omit to mention that in these efforts he has received substantial assistance from Mr. Vere Foster, and Mr. Penrose Fitzgerald, D.T.; the former having given £30 towards the erection of the Guilken Schools, and the latter an acre of land rent-free for the Whitegate Schools, with an offer of a pecuniary donation if funds ran short.

*Appendix.
Reports on
the State of
Schools.
Mr. W. M
W. Sir.*

Of the 105 ordinary schools, only 31 have rent-free residences attached for the Teachers, and of these only 2 have been built with funds supplied under the "Teachers' Residence Act."

It is much to be regretted that every school is not similarly provided, and the managers are, as a rule, most anxious that they should be, but are in many instances deterred from taking active steps in the matter, through the fear of legal complications, and annoyances of various kinds, which might arise in the case of changes of teachers, through death or otherwise, and, that their apprehensions on this head are not altogether fanciful, a matter that came under my own observation in another part of Ireland, goes some way to prove. In this case, the teacher having died, his widow refused to give up possession of a house and some land attached to the school, and given rent free for the use of the teacher for the time being, held it for some years, put the manager to a good deal of trouble, and in the end got a sum of money from her husband's successor as "compensation for disturbance;" the present occupier doubtless looks upon this house and land as so much hereditary estate, and it appears to me only too likely to become so. A somewhat similar occurrence took place in this district not long since.

I believe that the only available remedy for such a state of things is to have all residences, &c., intended for the use of public functionaries, vested in the Grand Jury, or some local board who would be responsible for their being kept in proper repair, and would prevent their diversion to uses for which they were never intended.

Of the 115 schools in operation, 95 are under the exclusive management of Roman Catholic Clergy, 4 under that of Protestant Clergymen, 11, including 3 Poor Law Union schools, under lay management; for 2 of the Convent schools the Superiress acts as correspondent, and 3 schools are under the joint management of the Roman Catholic and Protestant Clergy of the parish.

I believe that, except in a few isolated cases, no reasonable fault can be found with the management of these schools, but as my opinion as to the general efficiency of the management of our National schools is not quite in harmony with that of some of my colleagues, for whose views I have a very great amount of respect, it may be as well that I should state in what I consider efficiency of school management to consist.

I believe that a manager may very properly be termed "efficient" who visits his schools, either in person or by deputy, with a fair amount of regularity; sees that the teachers are at their post, and that business is being conducted in an orderly manner; checks the record of attendance unobtrusively, and endeavours to render the attendance more regular; occasionally examines a class; drops a kind word of encouragement to teacher, or administers a mild reproof if necessary, keeps the school-buildings in fair repair, and supplies apparatus so far as his means permits; conducts the correspondence with the Education Office, and lastly, sees that the teachers in their private life set a good example to their fellow-parishioners and pupils, and this is a standard which I can safely say is attained by nearly every manager in this district, and exceeded by some.

Appendix B.

Reports on
the State of
Schools.

Mr. W. M.
Wells.

In the 105 ordinary National schools, there are employed 55 male and 50 female principal teachers, 19 male and 33 female assistants, and 4 junior literary assistants and workmistresses; and in the 3 Poor Law Union schools, there are 2 male and 3 female teachers, thus making a total for the district of 162 principals and assistants.

Of the 105 ordinary schools, I consider 27 good, 54 fair, 7 middling, and 17 decidedly bad. Of the Convent schools, 4 are good, 2 fair; the remaining one having been only recently taken into connexion, has not yet been examined.

Among the very best in the district are 3 mixed schools taught by female teachers; in one of them examined by me for results last December, 78 pupils were presented, not one of whom failed in a single subject, a circumstance hitherto unprecedented in my experience, and the more creditable to the teacher, inasmuch as when she was appointed to the school less than 3 years ago, it was in such a state of inefficiency, that it had actually been placed on the "suspended list;" the second of these schools was examined last month by the Head Inspector, for the Carlisle and Black premises, I do not yet know with what result, and the third is almost equally good.

I think it would be well that the advantages of schools of this class should be more widely diffused, by making some arrangement which would enable other teachers to attend them as students of the methods employed which produce such satisfactory results, for I do not see what better training any teacher could have than that of service in some capacity in a really first-rate school, and I believe also that increased liberality should be shown to such schools in the appointment of monitors.

Of the other highly efficient schools under my charge, 16 are in charge of Female and only 8 in charge of male teachers, a fact which proves indisputably for this District the marked superiority of female to our present staff of male teachers.

The reason of this is not far to seek; just now the position of teacher in a good National school is the very best career open to an educated young woman in this country, while many much more attractive and lucrative pursuits are open to young men of the same class, who naturally choose the easier life and the occupation which will pay best.

This state of things is sure to continue until the position and prospects of our male teachers are so much improved as to render them an object of ambition to a better educated class of young men than those from whom their ranks are at present recruited.

A favourite cry of theirs is that the results system renders a large proportion of their income precarious and dependent on circumstances over which they have no control. My experience is that this statement is true only in cases where the attendance of pupils has been interfered with by the outbreak of some epidemic, and in a former report I have expressed my views on the desirability of some special arrangements being made to compensate teachers for such a contingency. With this one exception a results examination appears to me to be a most accurate gauge of the teacher's efficiency and the amount of results fees awarded on it will be found to be almost a fixed quantity from year to year.

These teachers almost invariably lay the blame of their own shortcomings on the irregularity of the attendance, and seem to think that compulsory education would be a panacea for everything, altogether ignoring the facts, that the regular attendants at their schools learn very little more than those who attend irregularly, and that when they are

unable to teach a few pupils well, they would be still less likely to succeed in instructing a larger number. I very seldom hear a good teacher complaining of irregularity in the attendance of his pupils, and I would venture to say that no people in the world are more anxious than the Irish for the advantages which education confers, or better able to judge of a teacher's efficiency. No one can fairly blame parents for not sending their children to schools from which they derive little or no advantage; but when I see, as I very frequently do, the sacrifices that people make to ensure the regular attendance of their children at a good school, I cannot help coming to the conclusion that, however necessary compulsory education may be among people of a lower type of intelligence, its adoption in this country would be a retrograde and uncalled for measure, and seriously calculated to endanger the success of the entire system of National Education by interfering with the well-earned and universal popularity which it now enjoys.

The only compulsion necessary here is the very mild form of it derived from the local influence of an efficient teacher, and the best way of rendering this universal is to place every possible obstacle in the way of inefficient persons desirous of entering the service of the Board and to hold out increased attractions to those likely to prove efficient.

With this view I would suggest that every teacher's certificate be provisional for three years, and that it be not confirmed except he has during that time given practical proof of his efficiency, this rule holds good at present to some extent as regards those teachers who have previously served as monitors, but, strange to say, does not apply to persons appointed to schools without any previous training and of whose qualifications the sole test has been the passing of a very easy examination.

I also think that every third-class teacher, under a certain age, should be compelled to attend the annual examinations. The amount of knowledge possessed by this class of teachers is presumably very small and it is highly desirable that they should be obliged to keep it up and possibly improve upon it.

When the state of the school warranted a teacher's promotion to a higher class, I have invariably, both here and in my former district, urged them to attend the examinations, but, I regret to say, with very little success. Their excuses for their apathy on this point are occasionally well founded, but are for the most part so far-fetched as to show clearly that their only reasons for absenting themselves are pure indolence and the absence of studious habits.

There are between eighty and ninety monitors serving at present in this district and, except in two or three schools, I have never found any difficulty in filling up vacancies as they occur. The appointment is, however, much more keenly sought after by girls than by boys, competent boys being generally able to obtain more lucrative employment.

If the results of the last two examinations of monitors seeking classification may be taken as a safe guide, I fear that the teachers do not bestow sufficient attention on the training of their monitors, as failure to obtain classification was the rule, and not the exception, even in the case of those coming from schools of good repute. I have accordingly rendered it pretty generally understood that, where I have reason to believe that monitor's failure was at all attributable to neglect on the teacher's part, I shall feel it my duty not to recommend the appointment of a successor. I would again urge the desirability of a knowledge of a portion of some recognised manual on method and a certain

Appendix B.
Reports on
the State of
Schools.
Mr. W. M.
Weir.

Appendix B. number of notes on lessons being required at the school examinations of monitors to entitle teachers to the gratuity for their instruction.

Reports on the State of Schools. *School Work—Infant Class.*—The children in this class, with very few exceptions, come up to, or exceed, the requirements of the programme, in many cases, indeed, I believe that they are forced on too rapidly and that their minds are prematurely developed to the serious detriment of their physical powers in after life.

Mr W. M. Weir.

First Class.—The only subject, the teaching of which I have frequent occasion to find fault with in this class is writing; in several schools the children are not systematically taught to form the letters properly, or to write straight, and this neglect at the outset, is a frequent cause of the careless and indifferent writing too often met with in the senior classes.

Second Class.—In this class the reading is generally very fair, spelling good, writing middling, owing to want of supervision, and arithmetic good. Explanation, also, is as a rule very fairly attended to.

Third Class.—This, the connecting link between the junior and the senior classes, is perhaps the most important class in the school, and I always pay particular attention to it at my examinations. Reading, spelling, and writing are for the most part very fair, arithmetic fair, grammar middling and geography fair. In examining in arithmetic, I first give two questions in notation, for which I mark collectively as one of the sub-heads, and then five questions in the simple rules and compound addition, and my minimum pass is absolute correctness in two questions, and a fair attempt at a third, provided that one of the exercises correctly solved is that in long division or addition of money. I consider, contrary to the opinion of many high authorities, that even the small amount of grammar required in this class, is by no means to be despised, and that when the teaching of it is rendered as interesting as it can be in the hands of a good teacher, it is well calculated to develop the intelligence of the child and train him to weigh the value of language, and in habits of verbal accuracy at the most critical stage of his intellectual growth.

Fourth Class.—The programme for this class is relatively lower than for any other of the higher classes, and the per-centage of passes in it is consequently high, except in agriculture which now comes in as a class-subject, and I have no hesitation in saying that in both this and the higher classes, the amount of knowledge acquired in this subject is not worth paying for. I regret that this should be the case, and I have always encouraged the teaching of it when a *bona fide* attempt at it was made, but very unsuccessfully. The principal cause of this failure in teaching so important a subject is the, perhaps, well-grounded belief prevalent among teachers, parents, and pupils, that even a knowledge, and not a smattering, of agriculture in theory is of very little use when unaccompanied by practice, in fact that it is not of more value than a theoretical knowledge of the carpenter's or any similar trade would be, and I think that this belief is not altogether unfounded, the text-books also are not sufficiently interesting, being altogether too full of facts, figures and formulae, to the exclusion of simple illustration and explanation which are the means best suited to convey instruction to the unformed mind of our average schoolboy.

Fifth Class.—In this class many failures occur, particularly in arithmetic in first stage, and in grammar and geography. I do not, however, consider the requirements of the programme for this class at all excessive, except as regards arithmetic, and I am fortified in this opinion by the fact that, in good schools, the teacher finds no difficulty in keeping pace with them,

and frequently exceeding them. The fault of these failures lies with those teachers who consider themselves so much masters of their business, that they will not condescend to make any preparation for it, but simply keep pace with the class, often learning quite as much as they teach. This system may pass muster in the instruction of the junior classes, the general knowledge of even an ignorant teacher being so much in excess of that of pupils in these classes, but it almost invariably comes to grief when extended to the senior classes, and is a fertile source of the removal from school of pupils in these classes, at an age when their services in agricultural districts are almost valueless, except perhaps at two seasons of the year; boys are shrewd observers, and are quick to discern when they have exhausted their teacher's stock of information; learning little or nothing, going to school becomes a wearisome and useless ceremony, and is soon altogether given up. That this is no over-statement of the case may be inferred from the fact, which can easily be verified, that in really efficient schools, pupils find no difficulty in attending with a fair amount of regularity for three or four years after the age at which they generally withdraw from inferior schools.

Appendix B.
Reports on
the State of
Schools.

*Mrs. W. M.
Woir.*

Sixth Class.—In good schools the pupils in this class receive a sound English education, sufficient to qualify them with very little special preparation for the minor Civil Service appointments; as a proof of this, I may mention that a pupil examined by me last November in this class, at the Dungourney Male National School, obtained one of the best places from Ireland in a competition for clerkships of the lower division in the succeeding month, without the slightest extra preparation; and several sixth class pupils from the Middleton Convent National School passed in three or more subjects at the last Intermediate examination. The mention of this latter circumstance reminds me of a rather instructive occurrence which took place at this examination, and which goes to prove that the Vere Foster style of writing, however well adapted it may be for the junior classes, is rather impractical and not well suited for purposes where a certain amount of celerity is indispensable. One of the girls under examination from this school, a high prize winner in Mr. Foster's annual competition, began her papers in her usual style of writing, but soon found that, if she continued it, she would be unable to write out her answers in the allotted time, and accordingly altered it for a less constrained style, the change was so striking that the Intermediate Education Commissioners actually wrote for an explanation of the matter, which of course, was given to their satisfaction.

Order, Discipline and Cleanliness.—These important requirements are, on the whole, very fairly attended to in the majority of the schools under my charge, but in very few are they altogether satisfactory: and in several schools the system of organization pursued is either not that best adapted to the school, or, if so, is imperfectly carried out in its details. I think I could remedy this to a considerable extent, if I were permitted to use my own discretion as to the examination of pupils at secondary inspections and, where I thought it necessary or desirable, to devote the time thus spent to the work of organization.

Number examined.—During the results year just ended, there were examined for results fees in this district 8,171 pupils, including 107 examined in one school by the head inspector, and at secondary inspections I examined 3,201; only 610 were presented for examination in extra subjects, the teaching of which appears to have received a severe

schools, whose united average attendance amounts to over 500. In the city of Waterford, having a population of 23,000, the only National school for boys is the male department of the Model School, in which the average attendance is only 50. In November 1879, the Waterford Presentation Convent school was placed under the Commissioners; and in March last another Convent National School was established in the city. The average attendance in these two schools is nearly 400; they are working very fairly, and afford hopeful promise of becoming useful institutions in diffusing a sound, practical education among the female children of a large portion of the humbler classes in Waterford.

In the towns referred to, the Christian Brothers have large establishments, and there are also Convent schools and Protestant Parochial schools.

Houses.—Of the 124 schools in operation, I have in the Annual Statistical Report returned 54 of the houses in which they are held as good and in proper repair, an equal number middling and in tolerable repair, and the remaining 16 as bad.

The worst of these "bad" cases, Loftus Hall, will soon disappear from the roll of National schools, and be replaced by new male and female schools.

The absence of local zeal and energy in the cause of education, the lack of funds, and the difficulty of procuring eligible sites, afford slender grounds for hope that suitable school buildings will soon be erected in the remaining cases.

Fittings.—During my first round of inspection, I was not a little surprised to find the desks and other portions of the furniture in many of the schools quite unsuitable, so that it was not at all uncommon for the pupils when writing to stand on the floor or kneel on the seats. Whenever I found the desks, presses, &c., unsuitable, I have brought the matter prominently under notice of the Managers, and urged the necessity of remedying their defects. In this business a fair measure of success has attended my efforts. In seven schools where the desks were particularly bad, they have within the last eighteen months been replaced by new and quite suitable desks; and in eight other cases they have been altered and repaired to fit them for their intended use. In connexion with three other schools, the Commissioners have made grants in aid of local funds to provide new furniture; and the manager of four other schools has distinctly promised to replace the present old, rickety and almost useless desks by new sets. In about half a dozen other schools the desks and other portions of the furniture are still quite unsuitable, but I have reason to expect that within a brief period the necessary steps will be taken to provide new fittings.

Offices.—There are no offices in connexion with sixteen of the schools, and where these appurtenances exist they are frequently badly built on unsuitable sites, without any provision for drainage, and their repairs and cleansing much neglected. I hope in the future to be able to report more favourably of the manner in which the out-offices are kept.

Residences.—Many of the teachers suffer much privation and inconvenience from want of suitable dwellings in connexion with their schools; and it is a regrettable circumstance that the local parties have not shown greater alacrity in applying the remedy at hand to this defect. The extremely liberal and generous provision made by the Government and Legislature for building residences for the National Teachers, has not hitherto been availed of in this District; in one solitary instance only has a teacher's residence been built under the recent Acts.

Appendix B.
Reports on
the State of
Schools.

Mr. M.
Molony.

Appendix B. *Teachers.*—Excluding Convent and Model Schools, the teachers of the district number at present 141, of whom 117 are principals and 24 assistants; of the former 59 are males and 58 females, the corresponding numbers for the latter being 9 and 15 respectively. They are not highly classed—quite the contrary; 7 of them are placed in first class, 39 in second, 90 in third class, and 5 are provisionally classed. Of the entire number, only 45 have undergone a systematic course of training to fit them for the onerous and important duties they are called upon to discharge. In addition to the staff enumerated above, there are in the schools under consideration one junior literary assistant and two work-mistresses.

Reports on
the State of
Schools.

*Mrs M.
J. Clapp.*

In literary status, the district occupies a rather low place, and compares unfavourably with other districts from which as a rule it is necessary to import teachers when required here.

It would be unjust to omit adding that the teachers of the district bear a high character for moral rectitude and integrity and are much and justly esteemed by the public—clergy and laity alike—in their respective localities.

Monitors.—The monitorial element is becoming a strong factor in the operation of the National schools, and the recent regulations restricting the appointment of assistants, must tend to its further development and expansion. At present there are 115 monitors in this district, of whom 14 are in third class, 99 in second, and 2 in first class. Nominally an hour or nearly an hour is devoted outside of school hours on five days of the week to their instruction and training by the teachers in whose schools they are employed, but it is to be feared that this time is not always profitably and diligently occupied in the interests of the monitors—that the time is not devoted fully and exclusively to teaching the monitors. And in strict truth, it is hard to blame the teachers for not being earnest and zealous in this particular duty—a duty of great importance for which the remuneration received is, in my opinion, insufficient. In the interests of education I would be glad to see the gratuity for training the monitors increased.

As I have not been quite two years in charge of the district, I do not intend to offer here any lengthened observations on the proficiency of the classes in the subjects of the school programme.

Reading.—In fourth and lower classes the reading except in a few schools is pretty accurate and tolerably intelligent; and, in my opinion, it possesses these desirable qualities because the children understand what they read, know fairly enough the meaning and application of the difficult words, and apprehend the drift and scope of the phraseology in the several passages read. From this statement it will be readily inferred that in these classes explanation receives a fair amount of attention. And such is the fact. In the higher classes matters in this respect are different and the results much less satisfactory. Here, where it is most required, the explanation, except in a few really good schools, is quite insufficient, unsystematic and inapposite; and as a necessary result the reading, though not unfrequently fluent and verbally accurate, is characterized by want of taste, intelligence, and effect. The pupils do not understand the passages read.

What, it may be asked, is the cause of these serious defects in the reading of the upper classes where one should naturally least expect to find them? And how is the evil to be remedied? The defects, it appears to me, are justly attributable to two causes: the difficulty of the text books, which contain lessons that are unsuitable to the age and capacity of the majority of the children using them, and the want of

such preparation on the part of the teachers as would enable them to afford clear, explicit, and apposite explanation of the subject matter of the lessons read. As to the remedy, two naturally present themselves. 1. The pass mark and fee for reading in these classes should not be awarded for mere mechanical reading as such unless it is accompanied by a fair apprehension of the matter of the passages read. The adoption of this course would soon induce many of the teachers to bestow the necessary time and attention on the preparation and subsequent explanation of the subject matter in these lesson books. This remedy, however, would only be partial in its operation; it would not, I fear, affect beneficially the inert and unskilful teachers of whom some certainly are to be found in this district.

Appendix B.
Reports on
the State of
Schools.
Mr. M.
Molony.

The second remedy, which should go hand in hand with the first, is to reconstitute the Fifth and Sixth Lesson Books and exclude from them two classes of lessons,—those lessons that are really too difficult for the children, and those others which, though not intrinsically difficult, possess few features of interest or attraction for the great majority of the children of National schools. The perusal of either class of lessons does not tend, I think, to create and foster a taste for reading in the children; whether it has not a contrary effect is questionable.

Meanwhile I beg to suggest that all the managers of female National schools shall be allowed the option of using in sixth class the Girls' Reading Book instead of the Sixth Class Book.

Spelling.—Oral spelling both of words and phrases is pretty successfully taught, and the dictation exercises are usually of a kind to secure passes. There are a few schools in which the dictation exercises are very well conducted.

Writing.—In a previous part of this report I have referred to the unsuitability of the desks in many of the schools; and undoubtedly their defects have tended, and in some cases still tend, to produce and perpetuate bad writing. Still, in the great majority of the schools the subject is fairly taught so far as copying from hand lines is concerned, but when writing comes to be used for its legitimate purposes—exercises of various kinds—the penmanship, except in a few good schools, is at best of mediocre character. The copybooks are generally pretty well kept, and it is only in a few schools, and in these from exceptional causes, that the prescribed number of exercises in the several classes are not ready for presentation on the day of inspection.

Arithmetic.—In most of the schools this useful branch is fairly taught to the junior classes but it is questionable whether the subject is handled in the senior classes so intellectually now as in former years. I fear not; there is too much cram. For seven or eight weeks before the examination the pupils are so drilled and exercised in working sums off cards nearly similar to those used by the inspectors that when the day of trial arrives their fresh retentive memories readily enable them to trace a strong likeness, sometimes amounting almost to an identity, between the questions on which they had been practised and those now set them, and as a result they manage to work a sufficient number to secure passes. Seldom do they understand the principles which underlie their work; their success is due in a great measure to a happy knack of memory.

Notation of integers and the more useful tables are generally pretty well known; notation, and the principles of decimals are seldom understood. Mental arithmetic is regularly practised in all the schools of the district, and in a fair proportion of them the pupils are pretty expert and accurate in such calculations.

Appendix B.
Reports on
the State of
Schools.

Mr. M.
Midway.

Grammar.—In the inferior schools of the district, about thirty, very little is known of this branch, and that little is scarcely of any practical benefit to the pupils; but in the great majority of the schools the subject has received considerable attention, and the knowledge of it attained is pretty well up to the standard of the programme except in two classes—fourth and sixth. In the former the requirements are rather high, and in the latter only very few pupils, even in really good schools, have acquired the ability to write without glaring blemishes a simple letter on any ordinary subject.

Geography.—As a rule but little professional skill is shown by the teacher in dealing with this very interesting subject. The pupils learn most of what they know of it from memory; very rarely do they receive well prepared, systematized, and judicious lessons in connexion with the maps on the matter they had committed to memory. My examinations in this branch have been so made as to render mere memory work of little avail in securing a pass, and as a consequence I find that the answering of the pupils has become more rational, accurate, and intelligent. Mathematical and physical geography, even in their most elementary forms, are very little known in the schools of this district.

Agriculture.—Not efficiently taught in the schools of this district. The Agricultural Class Book is regarded by teachers and pupils as much too diffuse. The volume should be recast and condensed in order to render it subservient to the object in view in placing it as a text book in the hands of the pupils in National schools.

Needlework.—The proficiency attained in this very useful branch is, on the whole, very moderate. The teachers often complain of the difficulty of providing a constant supply of the necessary materials for work, and I believe this difficulty constitutes the main drawback to the acquisition of facility and expertness in plain sewing and knitting. Curiously enough, the mothers of the girls show very little interest in their success in needlework.

Extra Branches.—Extra branches are taught in comparatively few schools of this district; usually they are geometry, algebra, vocal music and drawing, physical geography, sewing machine, and Girls' Reading Book. In geometry, algebra, and physical geography, the answering, except in two schools, has been generally very poor; in the other branches, a moderately fair proficiency has been attained.

Inspection.—During the year just closed, I examined for results 7,298 pupils in 122 schools; and for secondary inspections 2,373 pupils in 42 schools; making besides 154 incidental visits. In this work of inspection and incidental visits, I travelled over 3,820 miles.

I remain, gentlemen, your obedient servant,

M. MOLONY, District Inspector.

The Secretaries, Education Office, Dublin.

Mr. J. J.
O'Donoghue

Mr. J. J. O'DONOGHUE, A.M.

Rathkeale.

GENTLEMEN,—My last general report (for the year 1878), had reference to a district whose geographical limits were not identical with those of the district which is now known by the same title. At a time shortly preceding the date of the composition of that report, a new district was formed, having Listowel for its centre, with the effect of transferring 57 schools from mine to other supervision; whilst 32 schools from adjoining districts were substituted. This narrowing of the inspection area has enabled me to visit the schools more frequently, and

to keep them, metaphorically, more in hand; and we may hope that the expense of employing an additional officer has been balanced by the greater facility of inspection.

Although the report for the year ending 28th February, 1881, which I have now the honour to present, deals with the altered condition of things, yet, despite of wasting and repair, the identity of the original body may be said to be maintained; and whatever of pleasing development I may have to chronicle in the following pages, may be considered to have taken place symmetrically throughout the whole, the principles of growth being operative at the extremities as in the more important parts.

Neglecting very recent changes, the teaching staff during the year was as follows:—

	Principal Teachers.	Assistant Teachers.
I.,	3	—
II.,	11	—
III.,	43	10
IV.,	47	63
Unclassed,	3	3
	<hr/> 107	<hr/> 76

The conductors of the convent schools are not included in the foregoing table, which cannot be considered of a satisfactory character, especially as regards the assistant teachers, so great a proportion of whom are below second class.

Not am I able to detect signs of any general ambition and earnest effort to improve their status, since, notwithstanding the incentives applied by the arrangements of the pension scheme and other favourable enactments, as well as the encouragement I extend in all deserving cases, comparatively few applications have been received from third class teachers for admission to the next examinations. The cause of this stagnation is of a composite character; it would be a mistake to suppose it due in all cases solely to incompetence. Some of the most efficient teachers of the ordinary curriculum rank only in third class. The desire to rise is opposed in some, and stifled in most by domestic or personal difficulties, intellectual sluggishness, an easy-going spirit of indifference, to say nothing of misgivings concerning the results of examinations, which to their obscured vision do not seem to rest on a broader basis of certainty than do other events in human life. In this last respect, the lugubrious warnings of the Cassandra of a professional press do not tend to reassure them. On the general subject of classification, it may be useful to consider the desirability of allowing teachers to attain to the highest grade by examination while they feel the spring and vigour of youth, without placing them in the enjoyment of the corresponding salary until they have proved their capacity as school-keepers.

Excluding the three convent schools which, under the care of the Sisters of Mercy, are all efficiently conducted, the schools of the district may be classed, according to what I believe to be their present condition, as follows:—

	Pair or Good	Moulding.	End.	
Ordinary Scholes,	(3)	28	5	= 98
P. L. Union Scholes, 4 in number, comprising 8 Departments.	4	4	-	= 8

Of the 107 principal teachers above mentioned, 41 have been trained under the National Board. With the view of estimating the comparative utility of this training, the following analysis may be consulted :—

	Fair or Good.	Middling.	Bad.
(4.) Principals (Trained), having Schools, 51	9	1	41
(5.) Do., (not Trained), " " 38	24	4	38

Appendix B.

Reports on
the State of
Schools.Mr. J. J.
O'Donoghue.

The superiority of the work of trained teachers is a legitimate inference from the foregoing scheme, because, though it may be right to allow for extended experience on their part, yet too liberal a margin need not be allowed, since many included under head (B) have also enjoyed a lengthened practical acquaintance with school duties; and no argument can be based upon personal aptitude, since it can scarcely be contended that admissions to the Normal establishment are regulated on any well-defined principle of natural selection. The much greater proportion, therefore, of efficient trained than of efficient untrained teachers is, to some extent, indicative of the value of training; though, I must confess, this is not the whole story the table tells.

Let us now turn to the assistant teachers of the district, numbering 76. *Only one* has been trained under the Board. The great majority, indeed, do their work with some degree of efficiency, especially when they have served an apprenticeship as monitors; but I am satisfied that their usefulness both at present and hereafter, as head teachers, would be very sensibly augmented were they all obliged to pass through a suitable training college.

The existing staff of paid monitors exceeds one hundred and twenty, and has received a marked increase under the operation of the recent rule regulating the employment of assistant teachers. The instruction in ordinary subjects of these young persons appears to proceed with considerable regularity, and with a commendable degree of faithfulness on the part of the teachers; but it is very doubtful if the technical side of their business is systematically, or at all, illustrated by model lessons and effective professional instruction; so that if we are to regard the monitorial system as the nursery of our future elementary teachers and the substitute for, as it practically is at present, instead of being merely the feeder and complement of, a regular training establishment, we may view the prospect with some misgiving.

The subjoined table has been drawn up to show the general outcome of the Results examinations held in 104 schools during the official year. For reasons which it is not necessary to specify here, three schools were not examined.

	No. Examined.	No. Passed.	Percentage
Infants,	1,490	1,416	95.2
"Closed" Pupils:—			
Reading,	6,126	5,795	94.5
Spelling,	6,126	5,284	86.4
Writing,	6,126	5,923	96.6
Arithmetic,	6,126	4,745	77.4
Grammar,	5,305	2,482	47.3
Geography,	3,693	2,576	69.6

I regard this table with some measure of complacency. Since I invariably insist on work being done up to the full standard of the programme, and conduct, I believe, my examinations with strict uniformity, I look upon these figures as evidence of two important facts, viz.:—(a) That the schools of the district have attained to a very fair pitch of general efficiency. (b) That the requirements of the programme present no impossible standard, when an earnest and sustained effort is made on all sides to reach it.

Something, indeed, of the merit which this general view of the case may incline one to assign to the teachers, must be deducted when one descends more deeply into particulars. The all important subject of explanation, though undoubtedly now receiving more attention than was usual some time ago, is not yet by any means on a satisfactory basis. In truth, few teachers appear to possess the skill to treat this matter effectively, while many quite misconceive its nature. Some

confine their efforts to stupidly reiterating and "priming" their pupils on points already adverted to by the inspector, as though the text presented nothing else worthy of elucidation; others exhaust their energies on tough polysyllables, only to reproduce them in stranger guise than before, while more frequently it is some concise yet ordinary formula that demands expansion and interpretation. Reading, consequently, although quite passable as regards fluency, accuracy, and "grouping", the effect of careful mechanical training, is still, and will probably continue to be, wanting in other qualities necessary to constitute it the effective and agreeable exponent of the writer's thoughts.

The general results in spelling are very fair. The teachers understand, and in general, practise the prescribed methods of teaching this branch.

Writing is also fairly attended to; freedom and legibility are aimed at, rather than too painfully precise imitation of models, though in many instances this is also successfully cultivated. Several teachers, however, do not seem to appreciate the advantages of preserving the proper graduation of the series of copy-books which they adopt. Owing to those fluctuations in the maintenance of sale stock with which I have still to contend, pupils are often discovered using books too advanced or too elementary for their respective degrees of proficiency.

The pupils' acquaintance with arithmetic may be regarded as very fair, though mainly consisting in the ability to work readily ordinary examples under the various rules. The percentage of passes given above is contributed to satisfactorily by the junior and fairly by the senior classes, with the exception of first stage of fifth class. The passes here are only fifty-three per cent., as contrasted with seventy-five in class IV., sixty-eight in class V., and sixty-three in class VI. The lowering of the standard for class IV, and the consequent circumscribing of instruction on the part of the teachers, who are not indisposed to teach down to what is required of them, have led to this unpleasant result. There are now serious inequalities in the courses in arithmetic prescribed for the different senior classes, and this part of the programme demands revision. Meanwhile the difficulty may be obviated, to some extent, by teaching the old programme for fourth class where practicable; passes under the revised code would thus be secured, and timely preparation made for the following year's struggle. First and second classes have too little to do; the former could learn subtraction, and the latter multiplication (easy).

It is in grammar and geography that I believe the greatest strides have been made during the last two years, an advance of fully twenty per cent. on the passes in each having been secured. I always examine minutely in these branches, and have paid particular attention to the former, because, although still imperfectly taught, it is valuable as a mental gymnastic. It is true, that pupils often seem to regard grammar, as many teachers do the information provided in the Manuals of Method, to be valued indeed as a pearl of price, to be displayed at examinations and on other state occasions, but not to be exposed to the profane uses of every-day life. Although I have avoided provoking the carping of laziness, or alarming the fears of inexperience by professedly "requiring" instruction in the analysis of sentences, still the praxis in parsing now proceeds, partly with a view of anticipating my questions, and partly as a consequence of my method of examination, upon a simple system of analysis. This leads to attention being paid to the supplying of alluses, transpositions, &c.

A knowledge of geography being so much a matter of memory, instruction in this branch is not so reducible to principles. I think a

Appendix B.

the State of
Schools.*

*Mr. J. J.
O'Donoghue.*

Appendix B. specified portion of a good text-book ought to be prescribed for the pass examination in the higher classes, and would offer a more definite goal than the present vague programme.

Reports on the State of Schools. I have not to record much improvement in the knowledge of agriculture. The recent circular of the Board will, doubtless, supply a sharp stimulus, but the result will probably be an increase of the pupils' vocabulary of the subject, with little improvement of a practical nature. It is difficult to teach the right thing to those who see only the wrong thing: the examples before the eyes of those boys being, no doubt, too often violations of the practice recommended in their text-books.

Mr. J. J. O'Donoghue. The results in book keeping are middling and, I fear, of little permanent value. Needlework is satisfactory.

Some good work is done here in extra branches, but there is also some competing with them. Vocal music is essayed in some half-dozen of the ordinary schools. The holders of the Board's certificates in this subject (obtained at the training school) may be possessed of abundant knowledge of musical theory, but if so, they surely distribute their treasures not without frugal husbandry. The singing in these schools does not, I fancy, rise above what Professor Hullah calls "the average cacophonous utterances of children"; but, nevertheless, many managers are anxious to employ teachers able to impart even the most rudimentary instruction, and convert the very raw material into a modest choir for the village church. In the convent schools things wear a different complexion; and some very pleasing execution is heard, accompanied by respectable acquaintance with theory.

Pupils have occasionally been presented in Classics. Some translated Latin fairly, but their knowledge of the grammar was imperfect.

In the various extra branches over 1,100 pupils were examined. I may here be permitted to remark that, whatever reasons exist for debarring the National teachers from partaking of the emoluments arising out of the Intermediate scheme, it is at least desirable that the advantages of that system should be as widely as possible extended. I should therefore be glad to see a few scholarships or bourses established in each district, for which the poorer children of the primary schools could compete, and which should be of value sufficient to enable them to pass on to some secondary school, and finally, perhaps, to the University.

An incident worthy of notice occurred in this district during the year. The Christian Brothers, who had for many years conducted large schools at Newcastle and Rathkeale, were recalled by their Superiors, and the spacious halls occupied by them are now tenanted by National schools. Each of these schools is in charge of a first class teacher, and commands a considerable attendance. Very substantial results may be expected from the establishment of these as National schools, although I am not disposed to regard a congested attendance as in all cases an unmixed good.

Except the foregoing, and the removal from the rolls of an unimportant school, I have not to chronicle any changes made during the year in the amount of school accommodation. There is a considerable number of good school-houses throughout the district, and efforts are being gradually made to replace the bad ones by suitable buildings, but the usual obstacles are encountered, and often found to be, for the present at least, insurmountable.

I am, Gentlemen, your obedient servant,

J. J. O'DONOGHUE.

The Secretaries.

APPENDIX C.

TABLE No. 1.—Classification of 7,228 National Schools, in 60 School Districts, in regard to cleanliness of (A.) Out-Offices, (B.) School-rooms, and (C.) Children; also the number of Schools for which the Teachers pay Rent, the amount of Rent paid in each District, and the average Rent per School.

(C.) SPECIAL TABULATION of RESULTS EXAMINATIONS of PUPILS of ;

(1.) MODEL SCHOOLS.

The total number of Model Schools examined for results within the twelve months ended 31st December, 1880, was 94.

This number includes Model Evening Schools.

Number of pupils on school rolls on last day of month preceding inspection :—

Males, 6,689 ; Females, 5,119 ; Total, 11,808.

* See note at foot of page 356.

Number who had made 100 attendances or over within the results year, and were present and examined on day of inspection for results fees:—

Males, 4,538; Females, 3,627; Total, 8,165.

Per-centage to number on Rolls, 69·1.

The average daily attendance for twelve months ending last day of month immediately preceding the results examination in the respective schools was:—

Males, 5,109; Females, 3,825; Total, 8,934.

Centesimal proportion of number examined to the average daily attendance was 91·4.

The following figures will show the number of pupils examined, and the number promoted at the results examinations:—

GRADES.	Number examined.	Number promoted.	Per-centage promoted.
Infants, . .	842	307*	36·5
First Class, .	743	645	86·8
Second Class, .	859	714	83·1
Third Class, .	1,188	995	83·8
Fourth Class, .	1,235	993	80·4
Fifth Class, .	1,995	1,472	73·7
Sixth Class, .	1,303	977	75·0
Total, . .	8,165	6,103	74·7

Per-centage of pupils examined in each class to the total number examined in all the classes:—

Per-centage in Infants' Grade,	10·3
Class I.,	9·1
Class II.,	10·6
Class III.,	14·6
Class IV.,	15·1
Class V.,	24·4
Class VI.,	16·0
Total,	100·0

GENERAL ABSTRACT of ANSWERING.

Of the total number of infants (842) who had attended 100 days within the year, and were examined by the Inspectors, passes were assigned to 802.

Per-centage of Infants who gained passes to total number examined, 95·2.

* The number of Infants to which passes were assigned in these Schools was 802.

(3.) EVENING SCHOOLS.

The total number of evening schools examined for results within the twelve months ended 31st December, 1880, was 90.

This number is exclusive of Model Evening Schools.

Number of pupils on school rolls on last day of month preceding inspection :—

Males, 3,764 ; Females, 1,995 ; Total, 5,759.

Number who had made 50 attendances, or over, within the results year, and were present and examined on day of inspection for results fees :—

Males, 1,459 ; Females, 858 ; Total, 2,317.

Per-centage to number on Rolls, 40.2.

The average daily attendance for twelve months ending last day of month immediately preceding the results examinations in the respective schools was :—

Males, 2,218 ; Females, 1,171 ; Total, 3,389.

Centesimal proportion of number examined to the average daily attendance was 68.4.

The following figures will show the number of pupils examined, and the number promoted at the results examinations :—

GRADRS.	Number examined.	Number promoted.	Per-centage promoted.

The total number of Industrial Schools examined for results within the twelve months ended 31st December, 1880, was 23.

Number of pupils on school rolls on last day of month preceding inspection :—

Males, 479; Females, 1,703; Total, 2,182.

Number who had made 100 attendances, or over, within the results year, and were present and examined on day of inspection :—

Males, 305; Females, 1,340; Total, 1,645.

Per-centage to number on Rolls, . . . 75.4

The average daily attendance for twelve months ending last day of month immediately preceding the results examinations in the respective schools was :—

Males, 347; Females, 1,477; Total, 1,824.

Centesimal proportion of number examined to the average daily attendance was 90.2.

The following figures will show the number of pupils examined, and the number promoted at the results examinations :—

GRADES,	Number examined.	Number promoted.	Per-centage promoted.
Infants,	310	150*	48.4
First Class,	245	211	86.1
Second Class,	262	212	80.9
Third Class,	298	234	78.5
Fourth Class,	226	156	69.0
Fifth Class,	226	138	61.1
Sixth Class,	78	64	82.1
Total,	1,645	1,165	70.8

* The number of Infants to which passes were assigned in these Schools was 301.

Per-centage of pupils examined in each class to the total number examined in all the classes:—

Per-centage in infants' grade,	18.9
Class I.,	14.9
Class II.,	15.9
Class III.,	18.1
Class IV.,	13.7
Class V.,	13.7
Class VI.,	4.8
	100.0

GENERAL ABSTRACT OF ANSWERING.

Of the total number of infants (310) who had attended 100 days within the year, and were examined by the Inspectors, passes were assigned to 301.

Per-centage of infants who gained passes to total number examined, 97.1.

(5.) CONVENT AND MONASTIC SCHOOLS.

The total number of Convent Schools examined for results within the twelve months ended 31st December, 1880, was 193.

Number of Pupils on rolls on last day of month preceding inspection :—

Males, 14,675 ; Females, 61,905 ; Total, 76,580.

Number who had made 100 attendances or over within the results year, and were present and examined on day of inspection for results fees :—

Males, 7,231 ; Females, 35,448 ; Total, 42,679.

Per-centage to number on rolls, 55·7.

The average daily attendance for twelve months ending last day of month immediately preceding the results examination in the respective schools was :—

Males, 3,094 ; Females, 38,489 ; Total, 46,583.

Centesimal proportion of number examined to the average daily attendance was 91·6.

The following figures will show the number of pupils examined, and the number promoted at the results examinations :—

GRADE.	Number examined.	Number promoted.	Per-centage promoted.
Infants, . . .	12,987	5,649*	43·5

^a This amount was paid subsequent to 31 Mar., 1877, but for year 1876-7. Union non-contributory for 1877-8.

^b This amount is the balance repaid to the Union, it having ceased to be contributory after 31 Mar., 1877.

^c This amount is the balance repaid to the Union, it having ceased to become contributory after 31 Mar., 1878.

^d This amount was paid subsequent to 31 Mar., 1878, but for year 1877-8. Union non-contributory for 1878-9.

^e This amount was paid subsequent to 31 Mar., 1879, for year 1878-9. Union non-contributory for 1879-80.

NON-CONTRIBUTORY UNIONS.

II.—RETURN showing (a) number of non-contributory Poor Law Unions in each of the years 1876-7, 1877-8, 1878-9, and 1879-80; (b) number of Schools in these Unions eligible for Results Fees; (c) number of those Schools entitled to the additional Results Fees contingent on Local Aid; (d) amount of Results Fees (2nd moiety) paid to the Teachers of those Schools; (e) amount locally provided for obtaining the Results Fees; (f) number of Schools in which Local Aid was insufficient; (g) amount lost to the Teachers of those Schools by failure of Local effort.

	Number of non-contributory Poor Law Unions.	Number of Schools in these Unions eligible for Results Fees.	Number of these Schools entitled to the additional Results Fees contingent on Local Aid.	Amount of Results Fees (2nd moiety) paid to the Teachers of these Schools.	Amount locally provided where the additional Results Fees were allowed.	Number of Schools in which the Local Aid was insufficient.	Amount lost to the Teachers of these Schools by failure of Local Aid.
				£ s. d.	£ s. d.		£ s. d.
1876-7,	94	3,272	2,680	22,367 13 8	40,650 3 2	548	3,040 13 2
1877-8,	124	4,750	4,360	36,301 10 2	74,582 8 10	242	355 8 9
1878-9,	135	6,746	6,578	46,440 4 7	90,901 6 5	168	643 4 11
1879-80,	142	6,010	6,756	58,926 16 2	97,879 10 8	294	1,340 11 8

^a The above amount £22,367 13s. 8d. exceeds the sum actually paid by 2627 Os. 1d., owing to the failure of local parties in 74 cases to comply with the necessary forms in time to allow of payment being made before the close of the financial year.

^b In addition to the number (548) of schools excluded from additional grant by reason of insufficient local aid, there were 25 schools to which the Commissioners declined to award results fees in consequence of unsatisfactory accounts, and other serious irregularities.
